Serous Cavity Fluid and Cerebrospinal Fluid Cytopathology

Cytologic diagnosis by examination of exfoliated cells in serous cavity fluids is one of the most challenging areas in clinical cytopathology. Almost 20% of the effusions examined are directly or indirectly related to the presence of malignant disease, with carcinoma of the lung as the most common underlying culprit. This volume published in the Essentials in Cytopathology book series will fulfill the need for an easy-to-use and authoritative synopsis of site specific topics in cytopathology. These guide books fit into the lab coat pocket, ideal for portability and quick reference. Each volume is heavily illustrated with a full color art program, while the text follows a user-friendly outline format.

Features
Published in the Essentials in Cytopathology book series. Designed to be concise and easy to use. Fits in lab coat pocket. Site specific. Majority of illustrations are in four color. Illustration oriented accompanied by text in outline format

**Homeopathy in Healthcare: Effectiveness, Appropriateness, Safety, Costs**

This volume includes the full Health Technology Assessment (HTA) report on effectiveness, appropriateness, safety and costs of homeopathy in health care. The report was commissioned by the Swiss health authorities to inform decision-making on the further inclusion of homeopathy in the list of services covered by statutory health insurance. Other studies carried out as part of the Swiss Complementary Medicine Evaluation Programme (PEK) caused a massive stir due to their schematic and exclusively quantitative (negative-) outcomes for homeopathy. The present report, in contrast, offers a differentiated evaluation of the practice of homeopathy in health care.

**Features**
- Unique
- First English speaking book in this field
- Written by experts

**Contents**
Background and objectives of the HTA.- Introduction to the specialty of homeopathic principles and definition.- Homeopathy: research and research problems.- General problems with clinical trials in research.- HTA homeopathy – methods and material.- International utilization of complementary medical approaches.- CAM conditions and use in Switzerland.- Overview of systematic reviews on the clinical efficacy of homeopathy.- Clinical studies on the effectiveness of homeopathy for the indication URTI/A (Upper respiratory tract infections and Allergic Reactions).- Safety of homeopathic use.- Cost-effectiveness of homeopathy.- Future development of HTA results.

**Treatment of Esophageal and Hypopharyngeal Squamous Cell Carcinoma**

Squamous cell carcinoma of the esophagus has a lower incidence than other gastrointestinal tract cancer; however, there are many difficult issues related to the choice of appropriate therapy for these patients. In recent years, the use of multimodal treatment has greatly improved the prognosis of patients affected by this disease but several aspects of the oncological and surgical management are still controversial. This book aims to give a homogeneous approach to esophageal cancer treatment, based on the author’s lifetime experience in conjunction with exhaustive review of recent literature. In each chapter surgeons and oncologists will find appropriate tools for correct management of this difficult disease. The book analyzes all the aspects of staging and treatment, such as modern diagnostic and staging techniques (MRI or PET-CT), endoscopic treatment of early cancer, new minimally invasive and open surgical techniques, and combined treatment.

**Features**
- Homogenous approach to esophageal cancer treatment, which is the result of author’s lifetime experience
- Exhaustive recent literature review
- In each chapter, appropriate tools for correct management of this difficult disease

Il Ginseng

Virtù terapeutiche di una droga adattogena

Preface by: A. Drouard

Il termine Panax ginseng evoca la panacea, nome dato dagli antichi a piante dalle grandi proprietà terapeutiche. Mentre il nome cinese si traduce all’incirca come “uomo dalle gambe allargate”, il mistero circa le sue origini lo avvicinano storicamente alla celebre radice di mandragora dalle forme antropomorfe. Questa pianta dall’effetto rinforzante ha molte altre virtù e proprietà biologiche, di cui il potenziale terapeutico e immunostimolante è notevole. Come tutta una serie di piante denominate adattogene, è la diretta concorrente di un’altra tra le araliaceae, il Ginseng americano o Panax quinquefolium. Cosa sappiamo del Ginseng? Rari sono i casi di piante così ampiamente studiate dal punto di vista medico scientifico. Questa opera fornisce un’ampia panoramica delle conoscenze a disposizione, dagli studi classici ai dati scientifici più aggiornati, ponendo una definizione della parola adattogena, che differenzia dal Ginseng.

The Role of Laparoscopy in Emergency Abdominal Surgery

V. Mandala, Palermo, Italy (Ed.)

This is the first time a book about laparoscopy in emergency abdominal surgery has been published. Numerous articles have been published in specific surgical journals, but, until now, there has not been a book that collates all the aspects of this little-known field. The aim of this volume is to achieve a complete and easy presentation of all the implications associated with laparoscopy in emergency abdominal surgery. The book should be a manual that can be easily consulted by digestive, general, and specialized surgeons, especially in an emergency. The authors’ contributions are founded on evidence-based medicine, which gives the book scientific credibility, but this is coupled with their experience of daily practice, which adds an important complementary dimension to evidence-based medicine.

Features

- First book which includes all aspects of laparoscopy in abdominal emergency surgery
- High level of the book for graduates, upper and lower undergraduates
- Illustrations and film clips of each chapter complete the purpose of the book for educational implications
