Published under the SpringerOpen brand, SpringerPlus is a peer-reviewed, interdisciplinary and fully open access journal accepting high-quality research across all areas of science, technology, medicine, the humanities and social sciences. Only one year after its launch in January 2012, SpringerPlus was accepted for indexing by Scopus and PubMed Central. Six months later, the journal reached its 1,000th submission milestone and had published over 400 articles spanning all subject areas, many of which have been highly accessed.

Broad scope – high standards

SpringerPlus accepts high-quality research across all areas of science, meaning that your research will never be rejected for being out of scope. The journal’s easy submission method and fast processing enable you to publish your research efficiently while keeping additional effort to a minimum. All articles are subject to the same high-quality peer-review and publication standards you have come to expect from Springer. You can be certain of retaining the copyright to your work and, because all articles published in SpringerPlus are Creative Commons Attribution (CC BY) licensed, you can easily comply with the open access mandates of your funding sources or academic institutions.

All scientifically valid data is worth sharing

Often manuscripts are scientifically worthy but are not accepted for a variety of reasons; the topic may fall outside the scope of a given journal or the research may be predicted by reviewers to have low global impact or citability. With its broad scope, SpringerPlus accepts all manuscript formats in all disciplines, and does not judge articles on their perceived importance. The only essential requirement is the quality of the research; all articles deemed scientifically and methodologically sound by leading academics in the appropriate field will be published. This also allows quick decision-making and an efficient publication process, bringing your research to the attention of your peers in the fastest and easiest way possible.

Indexed in Scopus and PubMed Central

For Authors

I feel SpringerOpen in general, and SpringerPlus in particular, is an excellent concept. Researchers with an interdisciplinary scope need places to publish.

Engineering Author
Why should you as an author consider publishing with SpringerPlus?

**Broad scope**
SpringerPlus is flexible with the manuscript types it accepts for all disciplines; interdisciplinary studies and emerging areas of research, highly descriptive studies, negative results and large data reports are all welcome.

**Open Access: high visibility, high impact**
All articles are freely available online at springerplus.com, the journal’s dedicated website, and on SpringerLink. They are also included in major bibliographic databases such as Scopus and PubMed Central, maximizing visibility and citations for your work.

**Easy submission without restrictions**
There are no restrictions on the number of words, figures or supplementary data such as audio, video, large tables or data files. No extensive formatting is required; SpringerPlus will accept manuscripts in any appropriate format.

**High quality: rigorous peer review**
All submissions are subject to rigorous peer review, guaranteeing the quality and reliability of the research. You are encouraged to submit any available review reports that resulted from a previous submission, as these may speed up the review and publication process.

**Transparent and fast process**
Peer reviewers will not evaluate a manuscript according to its subject, perceived importance, novelty or ability to attract citations. The editorial policy is clear: Evaluations are based solely on the quality and scientific soundness of the article. Editors will not ask you to do additional research; the manuscript will either be accepted or rejected.

About SpringerOpen

Launched in June 2010, SpringerOpen includes our portfolio of over 140 fully open access journals across all disciplines. In August 2012, due to the growing demand for open access, we expanded our offering to open access books. Published under the SpringerOpen brand they complement our established open access journal portfolio.

Springer's high-level peer-review, publishing and production processes apply for our SpringerOpen journals and books in precisely the same way they do for titles with the subscription-based model, guaranteeing the quality and reliability of the work. Authors retain copyright and because all articles are Creative Commons Attribution (CC BY) licensed they can easily comply with open access mandates.

All SpringerOpen journals and books are included in our Open Access Membership Program with over 450 participating institutions worldwide. Authors at member institutions can publish in any SpringerOpen journal at a reduced rate or even no cost at all, and are entitled to a 15% discount on the publication fee when they publish a SpringerOpen book.

More information and a list of all journals and books can be found at springeropen.com
