Psychosocial Impact of Polygamy in the Middle East

Psychosocial Impact of Polygamy in the Middle East is the first to deal with polygamy in the Middle East in a comprehensive way. This book fills a gap in the literature by addressing the question of the psychosocial impact of polygamy on all members of polygamous families by offering a new way of examining family structure, such as father-mother, father-children, mother-children relationships, and the relationships between offspring from different mothers. It introduces a model for intervention with polygamous families for scholars and practitioners. This book also explores Islam's role in polygamy as well as the social and economic consequences of the phenomena.

Features

► Offers a new way of examining polygamous family structure ► Introduces a model of intervention with polygamous families ► Addresses the psychosocial impact of polygamy on members of polygamous families

Contents

Preface.- Polygamy Today.- Context and change: the structure of Arab society.- Polygamy, Islam, and marital justice.- The call for different perspectives: Methodology.- Discussion and Implications.- A proposed model for treatment of polygamous families.- Dealing with polygamous families and changing the rules.

Revue de synthèse

L'anthropologie des médecins (Moyen Âge–Époque moderne)

Jusqu'au XIXe siècle, les médecins se sont fait anthropologues, au sens où ils s'interrogeaient, par nécessité, sur la nature humaine. Les âges de la vie, l'influence de la géographie, des pratiques alimentaires et des mœurs, voire de la morale sont autant d'éléments que le médecin devait prendre en compte dans sa description de l'homme et de sa santé. La particularité de l'anthropologie des médecins tenait en effet avant tout à la reconnaissance d'une infinie variété au sein de l'humanité, variété à laquelle le médecin devait et savait seul s'adapter. De plus, l'extension très large de la notion de santé leur permettait de tenir un discours allant au-delà du simple bien-être du corps, puisqu'ils pouvaient revendiquer un rôle à jouer dans l'encadrement et l'amélioration des mœurs ou de la pensée.

Features

► Ce numéro retrace la généalogie de l'anthropologie des médecins (9e-18e siècle) ; les médecins se sont faits anthropologues au sens où ils interrogent la nature humaine, par delà la simple description du corps humain, engageant ses relations à l'âme notamment, et prenant en compte son irréductible variété ► Le point de vue médical sur l'homme n'a jamais été un simple matérialisme: cette enquête sur l'anthropologie des médecins montre l'étendue et la richesse des conceptions et des discours sur l'homme ainsi développés ► Les réflexions anciennes sur la nature de l'homme (ici analysées) ont pour but de contribuer à résoudre des problématiques contemporaines (notamment celle de l'éthique en médecine), en leur donnant une profondeur historique nouvelle

An archaeology of the margins Colonialism, Amazighity and heritage management in the Canary Islands

This book analyses the problematics of archaeological heritage management in the Canary Islands, which are echoed in other parts of the world where the indigenous heritage is under-represented. The present-day management of Canarian archaeological heritage has a very specific and unusual context given that the archipelago is located on the fringes of Europe, belonging to Spain and therefore to the European Unión, but geographically and in terms of early history being part of Africa. From a theoretical perspective, then, the proposed book analyzes issues such as the effects of colonialism and eurocentrism on the management of the archaeological heritage.

Features

► Presents a proposal for enhancing the archaeological heritage of the Canary Islands through the creation of archaeological parks involving the local community ► Analyzes the effects of colonialism and eurocentrism on the management of the archaeological heritage ► Shows how the course of history influences the ways in which archaeological heritage is managed

Contents

Introduction.- Chapter I: The invention of Canarian prehistory and early archaeological heritage management in the 19th century (1868-1936).-Chapter II: Archaeology and dictatorship: the centralisation of archaeological heritage management (1939-1975).- Chapter III In search of the indigenous culture of the Canary Islands (1975-2012).

New Series Springer Series on International Justice and Human Rights

Series editor: G. Andreopoulos

The purpose of this series—International Justice and Human Rights In the post-Cold War era, the emphasis has been shifting from national security to human security, and toward greater accountability in international relations, as evinced by, among other developments, the ongoing international criminalization of human rights violations. The International Justice and Human Rights series proposes to document this evolution in rigorous detail, focusing on the processes associated with the pursuit of justice in international society, the key actors and institutions involved, and the normative as well as policy considerations that shape their actions. Titles will critically examine the effectiveness of current justice systems, new opportunities for addressing longstanding challenges, the interplay between domestic and international justice options, the role of social justice movements and non-judicial initiatives, and the collective impact of all entities involved in creating a more humane and peaceful world. By analyzing core issues in the quest for justice and in the advancement of human rights norms and standards from an international perspective, this series will record the history and potential of a field that has immediate significance. The editor invites contributions from scholars in the humanities, social sciences, legal, and interdisciplinary fields, and from seasoned practitioners. This series aims both at showcasing cutting-edge research in this critical issue area, and at being relevant to frontline practitioners from governmental/international agencies and NGOs.
