**Behavioural Oncology**

**Psychological, Communicative, and Social Dimensions**

Medical, educational, and public health efforts have reduced the spread of many major diseases, yet cancer perseveres, in spite of continuing research and improvements in practice. Especial promising among therapeutic strategies are ones that recognise patients as individuals with thoughts, feelings--and speech. Rooted in deep understanding of the mutual relationship between behavior and cancer, Behavioural Oncology combines extensive clinical wisdom and empirical data to illuminate the psychological, social, and existential aspects of cancer, and to offer a framework for empathic, patient-centered care.

**Features**
- Combines expertise of a linguist specializing in doctor-patient communication and discourse analysis with that of a behavioral biologist with expertise in disease evolution
- Chapters include a summary of main conclusions and a list of topics for discussion
- Fuses knowledge of biology, psychology, and social science into the understanding of the behavioral aspects of cancer patients

**Contents**
Introduction.- The behavioural dimension of cancer and sickness.- Psychology and cancer.- The existential dimension of cancer.- The social dimension of cancer.- Language and the cross-cultural dimension of cancer.- Communication between doctor and cancer patient.- Complementary psychological therapies.

**Fields of interest**
Health Psychology; Public Health; Personality and Social Psychology

Psychotherapy for Families after Brain Injury

Whether caused by illness, accident, or incident, brain injury requires multi-tiered resources for the patient and considerable external care and support. When recovery is sidetracked by depression, anger, grief, or turmoil, family members and the support network have critical roles to play and need their own guidance and compassionate therapeutic interventions. Psychotherapy for Families after Brain Injury offers theoretical frameworks and eclectic techniques for working effectively with adult patients and their families at the initial, active, and post-treatment phases of rehabilitation.

Features
- Family therapy for diverse neurological populations and family configurations
- Theoretical/conceptual overview and a wealth of hands-on treatment techniques
- Includes case studies and holistic treatment approaches
- Includes handouts for clinicians and family members

Contents
Introduction and Overview.
- Familial/Early Social Considerations.
- Individual Change.
- Resilience and Positive Psychology.
- Environment and Sensitivity to Context.
- The Influence of Stressors on the Development of Psychopathology.
- The Contributions of Early Experience to Biological Development of Psychopathology.
- The Brain as a Window into the Development and Treatment of Psychopathology.
- The Contributions of Early Experience to Biological Development and Sensitivity to Context.
- Temperament Concepts in Developmental Psychopathology.
- Puberty as a Developmental Context of Risk for Psychopathology.
- Developmental Behavioral Genetics.
- Functional Magnetic Resonance Imaging in Developmental Psychopathology.
- Development of Psychopathology.
- Family Context in the Development of Psychopathology.
- Schooling and the Mental Health of Children and Adolescents in the United States.
- Peer Relationships and the Development of Psychopathology.

New Series
AFTA SpringerBriefs in Family Therapy

SpringerBriefs present concise summaries of cutting-edge research and practical applications. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include: A timely report of state-of-the-art analytical techniques A bridge between new research results, as published in journal articles, and a contextual literature review A snapshot of a hot or emerging topic An in-depth case study or clinical example A presentation of core concepts that students must understand in order to make independent contributions

T. Nelson, Santa Fe, NM, USA; H. Winawer, Princeton, NJ, USA (Eds)

Critical Topics in Family Therapy
AFTA Monograph Series Highlights
This Brief from the American Family Therapy Academy (AFTA) is a collection of chapters from the AFTA Monograph Series.

Features
► Presents clinical implications of families dealing with a broad range of traumatic situations
► Draws from members of the American Family Therapy Academy
► Written from a relational perspective

Bases of Adult Attachment

Linking Brain, Mind and Behavior

The book addresses the major theoretical question of how adult attachment develops. By facilitating the cross-fertilization of research findings from distinct perspectives on adult attachment. This work presents an innovative theoretical model of adult attachment that elucidates the varied processes underlying its formation and development.

Features
- Offers a new theoretical framework for the normative developmental processes
- Links neuroscientific findings with psychological processes and behavior
- Focuses on the development of adult attachment

Contents
A Theoretical Model of Adult Attachment Formation.- Processes involved in initial attraction and formation of new relationships.- Roots of adult attachment: The role of working models on attraction and partner preference.- Attachment in the age of online dating and social networking.- Beckes, Simpson, and Erikson delineate the cognitive and neural processes by which individuals may come to associate unknown others with feelings of security, a defining characteristic of attachment.- Affect regulation.- Separation distress.- Secure base/exploration.- Neural correlates of attachment in newlyweds and long-term married couples.- Coregulation synchrony.- Evolutionary perspective.- Physiological synchrony.- The role of regulatory function of attachment relationships in the development of anxiety disorders.
