Behavioural Oncology

Psychological, Communicative, and Social Dimensions

Medical, educational, and public health efforts have reduced the spread of many major diseases, yet cancer perseveres, in spite of continuing research and improvements in practice. Especially promising among therapeutic strategies are ones that recognise patients as individuals with thoughts, feelings—and speech. Rooted in deep understanding of the mutual relationship between behavior and cancer, Behavioural Oncology combines extensive clinical wisdom and empirical data to illuminate the psychological, social, and existential aspects of cancer, and to offer a framework for empathic, patient-centered care.

Features
- Combines expertise of a linguist specializing in doctor-patient communication and discourse analysis with that of a behavioral biologist with expertise in disease evolution. - Chapters include a summary of main conclusions and a list of topics for discussion. - Fuses knowledge of biology, psychology, and social science into the understanding of the behavioral aspects of cancer patients.

Psychology for Families after Brain Injury

Whether caused by illness, accident, or incident, brain injury requires multi-tiered resources for the patient and considerable external care and support. When recovery is sidelined by depression, anger, grief, or turmoil, family members and the support network have critical roles to play and need their own guidance and compassionate therapeutic interventions. Psychotherapy for Families after Brain Injury offers theoretical frameworks and eclectic techniques for working effectively with adult patients and their families at the initial, active, and post-treatment phases of rehabilitation.

Features
- Family therapy for diverse neurological populations and family configurations
- Theoretical/conceptual overview and a wealth of hands-on treatment techniques
- Includes case studies and holistic treatment approaches
- Includes handouts for clinicians and family members

Contents

Fields of interest
- Neuropsychology; Psychiatry; Social Work

**Bases of Adult Attachment**

**Linking Brain, Mind and Behavior**

The book addresses the major theoretical question of how adult attachment develops. By facilitating the cross-fertilization of research findings from distinct perspectives on adult attachment. This work presents an innovative theoretical model of adult attachment that elucidates the varied processes underlying its formation and development.

**Features**

- Offers a new theoretical framework for the normative developmental processes
- Links neuroscientific findings with psychological processes and behavior
- Focuses on the development of adult attachment

**Contents**

A Theoretical Model of Adult Attachment Formation.- Processes involved in initial attraction and formation of new relationships.- Roots of adult attachment: The role of working models on attraction and partner preference.- Attachment in the age of online dating and social networking.- Beckes, Simpson, and Erikson delineate the cognitive and neural processes by which individuals may come to associate unknown others with feelings of security, a defining characteristic of attachment.- Affect regulation.- Separation distress.- Secure base/exploration.- Neural correlates of attachment in newlyweds and long-term married couples.- Coregulation synchrony.- Evolutionary perspective.- Physiological synchrony.- The role of regulatory function of attachment relationships in the development of anxiety disorders.
