Kapitel 81: Akute lymphatische Leukämie bei Erwachsenen und Kindern

Arnold R., Bunjes D., Ehninger G. et al. (2002a). Allogeneic stem cell transplantation from HLA-identical sibling donor in high risk ALL patients is less effective than transplantation from unrelated donors. Blood 100, 77a (abstract 279).

Frassoni F., Labopin M., Giuckman E. et al. (1996). Results of allogeneic bone marrow transplantation for acute leukemia have improved in Europe with time—a report of the Acute Leukemia Working Party of the European Group for Marrow and Transplantation (EBMT). Bone Marrow Transplantation 17, 13–18.

Goldstone A. H., Richards S. M., Lazarus H. M. et al. (2008). In adults with standard-risk acute lymphoblastic leukemia (ALL) the greatest benefit is achieved from a matched sibling allogeneic transplant in first complete remission (CR) and an autologous transplant is less effective than conventional consolidation/maintenance chemotherapy in ALL patients : final results of the international ALL trial (MRC UKALL XII/ ECOG E2993). Blood 111, 1827–1833.

Hoelzer D., Arnold R., Diedrich H. et al. (2002). Successful treatment of Burkitt's NHL and other high-grade NHL according to a protocol for mature B-ALL. Blood 100, 159a (abstract 595).

Todeschini G., Tecchio C., Meneghini V. et al. (1998). Estimated 6–year event-free survival of 55% in 60 consecutive adult acute lymphoblastic leukemia patients treated with an intensive phase II protocol based on high induction dose of daunorubicin. Leukemia 12, 144–149.
