Metabolic Basis of Obesity

R. S. Ahima, University of Pennsylvania School of Medicine, Philadelphia, PA, USA (Ed)

The obesity epidemic has generated immense interest in recent years due to the wide-ranging and significant adverse health and economic consequences that surround the problem. Much attention has been focused on behaviors that lead to obesity, in particular to over consumption of energy-dense food and to sedentary lifestyle. However, obesity is an extremely complex condition with poorly defined pathogenesis. Thanks to greatly enhanced research in the area, the discovery of pathways in the brain and peripheral organs that mediate energy homeostasis has provided a framework for understanding the biological basis of obesity.

2011. XIV, 391 p. Hardcover

Imaging of Prosthetic Joints
A Combined Radiological and Clinical Perspective

An increasing percentage of the population has at least one prosthetic joint. Imaging is required for both initial assessment and routine follow-up of the implant, and this book is intended as an informative and up-to-date guide to the subject. After an introductory section covering a range of background topics, the level of information offered by different imaging techniques in presurgical planning and postimplantation assessment is analyzed.

C. Albanese, University of Rome Sapienza, Roma, Italy; S. Faletti, Città della Salute e della Scienza, Torino, Italy (Eds)

Operative Anatomy of the Heart

Operative Anatomy of the Heart covers unique data and artwork on the morphological description of cardiovascular surgery and surgical procedures. Topics covered include the entire anatomy of the human heart. An appendix presents the cross sections of the human body including the thoracic, abdominal and pelvic cavity. These sections are presented as morphological guidelines for better interpretation of the computer scans.

**Transvenous Lead Extraction**

**From Simple Traction to Internal Transjugular Approach**

Aim of this book is to provide readers with a state-of-the-art on lead extraction techniques. The chapters deal with lead characteristics, indications to lead removal, patient preparation, tools and techniques for extraction, and prevention and management of complications. In addition, a series of tips and tricks on how to treat some particular conditions are given. The volume will be an excellent resource for all those involved in the management of cardiac patients.

1st ed. 2011. XVIII, 158 p. Hardcover
2011. XXXIV, 150 p. 140 illus., 80 illus. in color. Hardcover

Viruses and Human Cancer

From Basic Science to Clinical Prevention

Research on oncogenic viruses and related human cancers has advanced rapidly in the past decade. Most articles, however, focus on a specific onco-genic virus and cancer. There is consequently a need for a comprehensive, up-to-date monograph that offers broad and integrated knowledge. Viruses and Human Cancer – From Basic Science to Clinical Prevention is designed to meet this need by providing an advanced overview on the basic and clinical aspects of oncogenic viruses and the human cancers that they cause.

**Pediatric Hydrocephalus**

In the last ten years the pediatric neurosurgeon has witnessed a real revolution in the diagnosis and treatment of pediatric hydrocephalus, the most frequently encountered condition in everyday clinical practice. The evolution of MRI and the advent of neuroendoscopic surgery have resuscitated the interest in the classification, etiology and pathophysiology of hydrocephalus. The book offers an updated overview on the recent progress in this field, and a new approach to hydrocephalus: the reader will find in it a modern and new presentation of an old disease, where genetics, endoscopy, cost-effectiveness analyses and many other aspects of the various therapies are extensively discussed.

**Methods of Clinical Epidemiology**

“Methods of Clinical Epidemiology” serves as a text on methods useful to clinical researchers. It provides a clear introduction to the common research methodology specific to clinical research for both students and researchers. This book sets out to fill the gap left by texts that concentrate on public health epidemiology and focuses on what is not covered well in such texts.

Neonatal Pulmonary Graphics
A Clinical Pocket Atlas

This pocket atlas explains how to use pulmonary graphics as a valuable adjunct for patient management. Actual patterns commonly encountered in neonatal practice are presented side-by-side with schematic illustrations that take apart the graphic and identify its key features, accompanied by brief explanatory text. The book addresses the principles of real-time pulmonary graphics, discusses waveforms and loops, and examines how both are affected by mechanical ventilation and disease states. A series of clinical cases brings key points to life.

Clinical Review of Vascular Trauma

This practical surgical reference for the diagnosis and management of traumatic vascular injuries is unique in that it brings together all prominent management strategies from the various surgical subspecialties, creating a unified voice on the care of the vascular trauma patient. Management of common vascular injuries is examined from a general, trauma, vascular, orthopaedic, plastics, cardiothoracic, and neurosurgical perspective by respected experts from each of these fields.

Reoperative Hand Surgery

This book provides hand surgeons with a definitive reference for the challenging “re-do” cases that surgeons are frequently called to address. Concise and discussing all of the more common issues that hand surgeons often face in performing revision surgery, this invaluable title is unique in that it looks specifically at the problem of what to do when the original index procedure did not go as planned. Topics covered include the hand, wrist, forearm and elbow, and several sections of the book discuss some of the psychological and social factors that also go into the decision process to reoperate or not. Written by experts in the field, the book includes color illustrations and photographs.

Filling a gap in the current training literature, this text analyzes the socioeconomic and environmental factors, health care disparities, policies, and cultural practices that impact the health and safety of mothers and the well-being of their children.

Transforming Health Care Through Information: Case Studies
Edited by specialists in Health Informatics, this updated third edition includes a new section on Link2care and builds on the specifics of case studies to exemplify the various phases of introducing technological advancements into healthcare institutions.

Principles and Practice of Interventional Pulmonology
Written by experts with multiple subspecialties, and superbly illustrated with hundreds of figures, this authoritative text is the first comprehensive treatment of the subject, and includes both pathophysiologica lbackground and clear procedural instructions.
Clinical Reproductive Medicine and Surgery
A Practical Guide

This book surveys medical and surgical management of reproductive disorders, covering reproductive genetics, endometriosis, ultrasonography and sonohysterography, fertility preservation and associated imaging modalities. Includes access to online video.

Gonioscopy

Here is a clear, practical guide to gonioscopy, a differential diagnostic tool that permits assessment of the anterior chamber angle and correct classification of glaucoma as a basis for treatment. Coverage includes laser treatment, surgery and medication. Particular attention is focused on primary and secondary open-angle and angle-closure glaucomas. In each case, the role of gonioscopy in evaluating the chamber angle is described with the help of many photographs and illustrations. The importance of knowledge of the chamber angle for laser treatment and surgery is fully explained, and the impact of medications is discussed.

The Young Adult Hip in Sport

This book focuses on the problems seen in the adult hip in sport including pre arthritic inflammatory, non inflammatory, and degenerative causes of hip pain. It particularly focuses on our rapidly evolving understanding and treatment of joint preserving surgery. In this book experts in the field discuss the anatomy, diagnosis, investigation and pathophysiology of young adult hip disease with a particular focus on the sporting population. Sports Medicine is now a specialty in its own right. Worldwide, hip and groin pain in elite sport is an unresolved issue.

Atlas of Fundus Autofluorescence Imaging

During recent years, FAF (Fundus autofluorescence) imaging has been shown to be useful in various retinal diseases with regard to diagnostics, documentation of changes, identification of disease progression, and monitoring of novel therapies. Hereby, FAF imaging gives additional information above and beyond conventional imaging tools. This unique atlas provides a comprehensive and up-to-date overview of FAF imaging in retinal diseases. It also compares FAF findings with other imaging techniques such as fundus photograph, fluorescein- and ICG angiography as well as optical coherence tomography.

Hardcover
ISBN 978-1-4614-1667-8

Establishing Medical Reality
Essays in the Metaphysics and Epistemology of Biomedical Science
Medicine has been a very fruitful source of significant issues for philosophy over the last 30 years. The vast majority of the issues discussed have been normative – they have been problems in morality and political philosophy that now make up the field called bioethics. However, biomedical science presents many other philosophical questions that have gotten relatively little attention, particularly topics in metaphysics, epistemology and philosophy of science. This volume focuses on problems in these areas as they surface in biomedical science. Important changes in philosophy make biomedical science an especially interesting area of inquiry.

Mitochondria and the Heart

Mitochondria have been pivotal in the development of some of the most important ideas in modern biology. Since the discovery that the organelle has its own DNA and specific mutations were found in association with neuromuscular and cardiovascular diseases and with aging, an extraordinary number of publications have followed, and the term mitochondrial medicine was coined. Furthermore, our understanding of the multiple roles that mitochondria play in cardiac cell homeostasis opened the door for intensive experimentation to understand the pathogenesis and to find new treatments for cardiovascular diseases.

Minimally Invasive Spine Surgery
A Surgical Manual
Don’t miss it! The second, completely revised and expanded edition of the successful surgical manual on minimally invasive spine surgery includes 51 chapters (including more than 20 new chapters) covering all current minimally invasive techniques in spine surgery. A complete survey of all microsurgical and endoscopic techniques with a special focus on semi-invasive injection techniques for diagnostic and therapeutic purposes in low back pain is given. The clear chapter structure with terminology, history, surgical principles, advantages/disadvantages, indications, access principles, complications, and results facilitates navigation through the manual.

Diagnosis of Endometrial Biopsies and Curettings
A Practical Approach
Derived from the authors’ long-running course presented at the International Academy of Pathology, this second edition, now with color illustrations, continues the tradition of its predecessor as being the concise and complete diagnostic guide to the endometrial biopsy. The text is structured so as to present a logical approach to formulating a pathologic diagnosis from the diverse array of tissue received in the surgical pathology laboratory.

**Strategic Urban Health Communication**

Strategic Urban Health Communication Charles C. Okigbo, editor People are bombarded with messages continuously and sorting through them constantly. In this milieu, critical ideas about health promotion and illness prevention are forced to compete with distracting, conflicting, even contradictory information. To get vital messages through, communication must be effective, targeted, artful—in a word, strategic. Strategic Urban Health Communication provides a road map for understanding strategy, enhancing strategic planning skills, and implementing strategic communication campaigns.

**Spina Bifida**

Management and Outcome

By C. Sainte-Rose

As we stand at the dawn of the 21st century, one may ponder the rationale of writing a book on spina bifida. Once commonplace in European countries prior to the era of ultrasonography, this disease became increasingly rare in developed countries as a result of improvements in antenatal diagnosis, to the point that we believed it to be disappearing. Knowledge of spina bifida and of its treatment, once so richly diffused only 30 years ago, began to fade.

Musculoskeletal Tissue Regeneration
Biological Materials and Methods
Foreword by: C. Vacanti

The repair of musculoskeletal tissue is a vital concern of all surgical specialties, orthopedics and related disciplines. Written by recognized experts, this book aims to provide both basic and advanced knowledge of the newer methodologies being developed and introduced to the clinical arena. A valuable resource for researchers, developers, and clinicians, the book presents a foundation to propel the technology and integration of the current state of knowledge into the 21st century.

Andrology for the Clinician

Andrology for the Clinician consists of two parts: In Part One, the busy clinician can easily find the problem-oriented information he or she needs on such issues as male factor fertility problems, male contraception, and male genital tract infection and tumours. Part Two contains in-depth subject-oriented information and adds important scientific background information to the recommendations received in Part One. Several leading experts have contributed to this work, which has been extensively subedited by world-renowned editors to ensure a well-structured didactic design and homogeneous content.

Diagnostic Nuclear Medicine

With contributions by numerous experts

Foreword by: A. Baert

2nd edition - totally updated and revised. Provides the latest update on procedures in nuclear medicine. Documents the role of PET in oncology and introduces dual modality imaging with PET/CT. Includes sections on molecular imaging and future prospects. Represents an adjunct to standard knowledge of diagnostic nuclear medicine.

2nd, rev. ed. 2006. X, 356 p. 235 illus., 11 illus. in color. (Medical Radiology / Diagnostic Imaging) Hardcover

CT of the Heart

Principles and Applications

Leading clinicians and researchers from around the world review the full scope of current developments, research, and scientific controversy regarding the principles and applications of cardiac CT. Richly illustrated with numerous black-and-white and color images, the book discusses the interpretation of CT images of the heart in a variety of clinical, physiological, and pathological applications. The authors emphasize current state-of-the-art uses of CT, but also examine developments at the horizon. They also review the technical basis of CT image acquisition, as well as tools for image visualization and analysis.

Breast Ultrasound

Up-to-date and richly illustrated, this book covers breast carcinoma, with guidance on differential diagnosis and pre- and postoperative ultrasound appearances. Includes benign diseases, age-related features, breast abnormalities in men and lymph nodes. It provides a comprehensive overview of current ultrasound techniques and explains the advantages and pitfalls of various ultrasound imaging modalities. Detailed attention is devoted to breast carcinoma, with guidance on differential diagnosis and presentation of pre- and postoperative ultrasound appearances. The most important benign breast diseases are also described and illustrated.

Neuroendoscopy

Current Status and Future Trends

As a result of technological improvements, neuroendoscopy is now used in the treatment of many more patients, enabling the performance of previously unavailable operations with low complication rates and rapid patient recovery. This book presents the distilled experience of world experts in this evolving field. Current applications in a wide variety of settings are explained in detail and likely future developments are identified. In addition, the available neuroendoscopic instruments are reviewed and the results of international trials and collaborative studies, presented.

Primary Care Procedures in Women’s Health

There are many reasons for primary care providers to offer women’s health procedures in an office setting, from the values patients place on continuity of care to the lack of access to specialty care that patients may experience in rural areas. This book introduces simple office procedures to clinicians, as well as office staff who must familiarize themselves with new equipment and billing and coding information.

**Imaging of Orthopedic Sports Injuries**

With contributions by numerous experts

Foreword by: A. Baert, Introduction by: C. Faletti

This volume provides an updated review of imaging abnormalities in orthopedic sports injuries. The first part of the book contains background information on relevant basic science and general imaging principles in sports traumatology. The second part comprises a topographic discussion of sports injuries. Each chapter highlights the merits of different imaging techniques, focused on a specific clinical problem. In the third part, natural history, monitoring and follow-up imaging are discussed.

The Diabetic Foot
Medical and Surgical Management
In its updated edition, this book covers important advances in knowledge of the pathogenesis of diabetic foot problems, and reviews optimal treatment for this debilitating condition. Blends new knowledge with time-tested principles of diabetic foot management.

A. Veves, J. M. Giurini, F. W. LoGerfo, Beth Israel Deaconess Medical Center, Boston, MA, USA (Eds)

Fundamentals of Antimicrobial Pharmacokinetics and Pharmacodynamics
This book explores the application of pharmacokinetic-pharmacodynamic principles for the optimization of antimicrobial therapy and infectious diseases. Covers fundamentals of antimicrobial pharmacodynamics, and translation of model data to clinical situations.

A. Vinks, Cincinnati Children’s Hospital Medical Center, Cincinnati, OH, USA; H. Derendorf, University of Florida, Gainesville College of Pharmacy, Gainesville, FL, USA; J. Mouton, Radboud University Nijmegen, Nijmegen, The Netherlands (Eds)

Valvular Heart Disease
Written by a highly experienced group of experts, this book offers insights into the widely varying hemodynamic effects and clinical course of heart valve conditions. The chapters expand upon the recently developed guidelines on valvular heart disease.

**Shifting Paradigms in Public Health**

From Holism to Individualism

This book explores the shift in public health discourses from a population focus to methodological individualism. It argues for the incorporation of a rights-based perspective to bring social justice and fairness within public health policy.

2013. XVII, 203 p. Hardcover
