Journal Metrics 2016

Speed

| | |
|--|-----------|
| Days from submission to first decision – 2016 Number of days from submission of the manuscript to first decision. | 17 |
| Days from acceptance to online publication – 2016 Number of days from acceptance at publisher to published online. | 16 |

Usage

| | |
|---|---------------|
| Downloads – 2016 Springer measures the usage on the SpringerLink platform according to the COUNTER (Counting Online Usage of NeTworked Electronic Resources) standards. | 30,474 |
| Usage Factor – 2015/2016 The Springer Journal Usage Factor 2015/16 was calculated as suggested by the COUNTER Code of Practice for Usage Factors. It is the median value of the number of downloads in 2015/16 for all articles published online in that particular journal during the same time period. The Usage Factor calculation is based on COUNTER-compliant usage data on the SpringerLink platform. (Counting Online Usage of NeTworked Electronic Resources) standards. | 518 |
| Mentions and articles discussed via Social Media platforms – 2016 Additional research-impact indices, known as alternative metrics, are offering new evaluation alternatives. One of those is a researchers' reputation made via their footprint on the social web. The social media statistics are provided by Altmetric. They monitor article mentions on Twitter, Facebook, Google+, Reddit, Blogs, News articles, Policy documents and Faculty of 1000 reviews. | 23 |
| LinkOut Statistics – 2016 One of the most important indexing services for biomedical and life sciences literature, PubMed, provides us with information on how often PubMed users follow links to SpringerLink. | 3,910 |

Impact

SJR – 2016

SCImago Journal Rank (SJR) is a measure of scientific influence of scholarly journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where such citations come from.

0.125

h5 Index – 2016

Google's h5 Index is a metric based on the articles published by a journal over the previous 5 calendar years with a minimum of 100 articles in this period. If a journal publishes 100 articles sooner, an h5 Index can be calculated earlier. h is the largest number of articles that have each been cited h times. The h5 Index therefore cannot be dominated by one or several highly cited articles.
