Email : wangjianee@gmail.com; jwang@islab.snu.ac.kr

Information and Communication Technologies (ICT) central to electronic commerce play a central role in socio-economic development in many emerging economies. ICT applications can improve business processes and delivery of services and to create new industrial technologies which can provide alternative solutions for labor force engagement. With this special issue, we hope to encourage new and innovative research on the application of ICT for digital entrepreneurship and industrial development for fast, accurate decision making in business applications, creating more customer centric business models and implementation of cutting-edge technologies. We are encouraging submissions addressing, but not limited to, ICT based e-Commerce research in the following areas:

- Innovation policy
- Legal issues
- Education
- Monitoring, predicting and disseminating information about human health and crops and animals in agriculture
- Banking and electronic currencies
- Social issues
- Machine learning, artificial intelligence and robotics
- Data Analytics
- Open source concepts, methods and technologies for industrial development
