W. Sheehan, Willmar, MN, USA
**A Passion for the Planets**
Envisioning Other Worlds, From the Pleistocene to the Age of the Telescope

This volume tells the story of man’s visual exploration of the planets. It travels across the historical landscape, from the earliest origins of man’s compulsion to observe the planets to the great developments of the seventeenth century.

Available
2010. VI, 194 p. 76 illus. in color. Softcover
- € 34.95 | £31.99
- * € (D) 37.40 | € (A) 38.45 | sFr 50.50
ISBN 978-1-4419-5970-6

J. Martin, London, UK
**A Spectroscopic Atlas of Bright Stars**
A Pocket Field Guide

This is the first Spectral Atlas designed for amateur astronomers. For the first time in one place, it identifies more than 70 (northern hemisphere) bright stars that are suitable observational targets for both amateurs and astronomy students.

Available
2010. IX, 205 p. 87 illus. (Astronomer’s Pocket Field Guide) Softcover
- € 29.95 | £24.99
- * € (D) 32.05 | € (A) 32.95 | sFr 43.00

S. Rumistrewicz, South Bedfordshire, UK
**A Visual Astronomer’s Photographic Guide to the Deep Sky**
A Pocket Field Guide

Aimed at observers who don’t examine deep-sky objects because they don’t know what to look for, this volume focuses on these objects and provides photographs of all those discussed—exactly as they would be seen from amateur astronomers’ suburban locations.

Available
- € 44.95 | £40.99
- * € (D) 48.10 | € (A) 49.45 | sFr 64.50

S. Ringwood, Essex, UK
**Astronomers Anonymous**
Getting Help with the Puzzles and Pitfalls of Practical Astronomy

This parody of a typical “Lonely Hearts column,” specifically written for troubled astronomers, features questions and answers about astronomy that entertains as well as informs. It offers much practical advice as well as stories on the history of astronomy.

Available
2010. XV, 222 p. 60 illus., 34 in color. Softcover
- € 29.95 | £26.99
- * € (D) 32.05 | € (A) 32.94 | sFr 46.50

G. Schilling, Amersfoort, The Netherlands
**Atlas of Astronomical Discoveries**

This book tells the story of 400 years of telescopic astronomy and details the 100 most important discoveries. Spectacular photographs, taken with the largest telescopes on Earth and in space, portray distant corners of the universe.
Due April 2011
2011. IX, 234 p. 200 illus. in color. Hardcover
- € 39.95 | £27.99

**Drifting on Alien Winds**  
Exploring the Skies and Weather of Other Worlds

Drifting on Alien Winds surveys the many creative, and often wacky, ideas for exploring alien skies. Through historical photographs and stunning original paintings by the author, readers explore the weather on planets and moons, from the simmering acid-laden winds of Venus, to liquid methane-soaked skies of Titan.

Due March 2011  
2011. XIII, 238 p. 225 illus., 75 in color. Hardcover

ISBN 978-1-4419-5570-8

F. J. Ballesteros, Universidad de Valencia, Paterna, Valencia, Spain

**E.T. Talk**

How Will We Communicate with Intelligent Life on Other Worlds?

Synthesizing the work of The Search for Extraterrestrial Intelligence (SETI) Institute, ET Talk provides an investigation of potential methods of communication with intelligent extraterrestrial civilizations. Topics include the origin of life and various methods used today to search for life in the universe.

Available  
2011. Approx. 215 p. 114 illus., 95 in color. Softcover  
► approx. € 26,95 | £23.99  
► approx. * € (D) 28,84 | € (A) 29,65 | sFr 40,50

**Grappling with Gravity**

How Will Life Adapt to Living in Space?

Grappling with Gravity explores the physiological how life in different worlds -- such as outerspace or settlements on the moon -- would affect humans, plants and animals. The test explores how the human body will begin, almost immediately, to adapt and change to be able to function in these strange environments.

Due June 2011  
2011. Approx. 215 p. 114 illus., 95 in color. Softcover

How Spacecraft Fly
Spaceflight Without Formulae

Sputnik was launched almost fifty years ago, and most people still don’t understand how. Written for the layman, this text explains aerodynamic and astrodynastic spaceflight using informal language free of mathematics and technical jargon.

Available
2008. XVI, 268 p. 71 illus., 11 in color. Hardcover
► € 19.95 | £15.00

It’s ONLY Rocket Science
An Introduction in Plain English

This is a brilliant explanation of the basics of space flight, from building the rocket to planning the mission and getting home again. Written by an engineer who is also an accomplished science writer, it covers the subject comprehensively, yet is almost entirely descriptive and non-mathematical.

Available
2008. XIV, 350 p. 70 illus., 35 in color. Softcover
► € 24.95 | £19.99
► * (D) 26.70 | (A) 27.45 | sFr 36.00

If the Universe Is Teeming with Aliens ... WHERE IS EVERYBODY?
Fifty Solutions to the Fermi Paradox and the Problem of Extraterrestrial Life

In a 1950 conversation at Los Alamos, four world-class scientists generally agreed, given the size of the Universe, that advanced extraterrestrial civilizations must be present. But one of the four, Enrico Fermi, asked, “If these civilizations do exist, where is everybody?” Given the fact that there are perhaps 400 million stars in our Galaxy alone, and perhaps 400 million galaxies in the Universe, it stands to reason that somewhere out there, in the 14 billion-year-old cosmos, there is or once was a civilization at least as advanced as our own. Webb discusses in detail the 50 most cogent and intriguing solutions to Fermi’s famous paradox.

Available
2002. XI, 288 p. 72 illus. Hardcover

Mars
From Myth and Mystery to Recent Discoveries

This absorbing book tells the story of Mars since the dawn of mankind’s curiosity for celestial wonders. It covers everything, right from our ancient beliefs, through the revolution in our concepts of the cosmos around us in the 1600s, to the present day knowledge and beyond.

Available
2009. XVII, 256 p. 230 illus., 176 in color. Hardcover

Moonwalk with Your Eyes
A Pocket Field Guide

Of all the many things we can look at in the night sky, the Moon is one of the richest in its ever-changing detail, as changes in light and shadow daily transform what you can see of every feature. Whether you use binoculars, a small telescope or a large one, you will find the Moon offers new horizons rich in exploration opportunities. Moonwalk with Your Eyes guides the reader quickly through lunar basics: how to determine the lunar day and what lunar terminology you might encounter here and in other books. From there, you’ll be taken on a guided visual journey that encompasses what can be seen at any give time for all levels of observers.

Rare Earth
Why Complex Life is Uncommon in the Universe
What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe. Everyone who has been thrilled by the recent discoveries of extrasolar planets and the indications of life on Mars and the Jovian moon Europa will be fascinated by Rare Earth, and its implications for those who look to the heavens for companionship.

**Popular Reading**
The Tunguska Mystery

This objective study examines the many-sided Tunguska phenomenon, the explosive event in the USSR that cannot be explained by simple meteoric models. The author sets out the progress made in researching the event and deals with the UFO myths surrounding it.

Available 2009. X, 318 p. 49 illus., 11 in color. Hardcover

M. Gasperini, Università di Bari, Italy

The Universe Before the Big Bang

Cosmology and String Theory

The author of this book draws attention to ongoing and future observations that might reveal relics of an era before the big bang. In doing so, he provides an accessible introduction to the extraordinary new ideas of string cosmology.

Available 2008. XI, 208 p. 34 illus. Hardcover

D. A. Seargent, The Entrance, NSA, Australia

Weird Astronomy

Tales of Unusual, Bizarre, and Other Hard to Explain Observations

A book that will appeal to all who are interested in unusual celestial occurrences, this volume details a variety of odd astronomical observations and includes a number of amusing anecdotes that demonstrate the significance of these “weird” phenomena.

Available 2011. XIII, 304 p. 46 illus., 18 in color. Softcover

R. Greenberg, University of Arizona, Lunar and Planetary Laboratory, Tucson, AZ

Unmasking Europa

The Search for Life on Jupiter’s Ocean Moon

This book features firsthand accounts of Galileo’s mission to Jupiter and stunning images of Europa’s surface. It tells the inside story of a very human enterprise in science that led to the discovery of a fantastic new world that might well harbor life.

T. Plotner, Caledonia, Ohio, USA; J. Metsavainio, Oulu, Finland

Viewing the Universe in Stereovision

In this book over 50 unique stereo full-color images from the Hubble Space Telescope and other sources take readers on an outward journey from Earth, through the solar system and deep into the expanding cosmos. All images feature a breathtaking 3D perspective.

Due March 2011

2011. 160 p. 300 illus. in color. Hardcover

Apollo
The Definitive Sourcebook

This book provides an overview of the origins of the Apollo program and descriptions of the ground facilities, launch vehicles and spacecraft that were developed in the quest to reach – and return from - the surface of the moon. It will serve as an invaluable single-volume sourcebook for space enthusiasts, space historians, journalists, and others. The text includes a comprehensive collection of tables listing facts and figures for each mission.

Available
2006. XXXII, 633 p. 224 illus. (Springer Praxis Books / Space Exploration) Softcover

 Springer Praxis Books

Apollo 12 - On the Ocean of Storms

Each Apollo mission that reached the Moon in the 1960s and 1970s deserves its own book-length account covering the planning, the flight, and the scientific results. This volume is just one in a series that will become the definitive account of the Apollo era.

Due March 2011

2011. XIX, 522 p. 228 illus., 44 in color. (Springer Praxis Books / Space Exploration) Softcover

 At Home in Space
The Late Seventies to the Eighties

At Home in Space explores both the individual missions within the decade and key challenges facing human space exploration, from the problems of simply breathing and eating in space to the difficulties of locomotion on the Moon.

Due April 2011

2011. 500 p. 170 illus. (Springer Praxis Books / Space Exploration) Softcover

 At the Edge of the Solar System
Icy New Worlds Unveiled

Astronomers recently discovered a very rich population of Pluto-like objects beyond the orbit of Neptune. This book offers in-depth historic and physical discussions of those remote regions and includes nearly two hundred amazing illustrations, most in color.

Available
2010. X, 194 p. 194 illus., 44 in color. (Springer Praxis Books / Popular Astronomy) Softcover

 Cassini at Saturn
Huygens Results

Brings the story of the Cassini-Huygens mission and their joint exploration of the Saturnian system right up to date. Combines a review of previous knowledge of Saturn, its rings and moons, including Titan, with new spacecraft results in one handy volume. Provides the latest and most spectacular images, which will never have appeared before in book form. Gives a context to enable the reader to more easily appreciate the stream of discoveries that will be made by the Cassini-Huygens mission. Tells the exciting story of the Huygens spacecraft’s journey to the surface of Titan.

Available
2007. XXII, 413 p. 124 illus., 24 in color. (Springer Praxis Books / Space Exploration) Softcover
Cosmic Biology
How Life Could Evolve on Other Worlds

This text discusses a broad range of possible environments where alien life might evolve in our universe. It also uses current knowledge of chemistry, energy and evolutionary tendencies to consider possible life forms ranging from the familiar to the exotic.

**Galaxy Collisions**

*Forging New Worlds from Cosmic Crashes*

Galaxy Collisions shows what’s out there in the universe, what it’s like in other galaxies, how they might look, and how cosmic processes affect life in other solar systems. It explains the development of physical structure, and the effect of galaxy scale processes.

Available 2011. XV, 285 p. 87 illus., 44 in color. (Springer Praxis Books / Popular Astronomy) Softcover

**Space Systems Failures**

**Disasters and Rescues of Satellites, Rocket and Space Probes**

The very first book on space systems failures written from an engineering perspective. Focuses on the causes of the failures and discusses how the engineering knowledge base has been enhanced by the lessons learned. Discusses non-fatal anomalies which do not affect the ultimate success of a mission, but which are failures nevertheless. Describes engineering aspects of the spacecraft, making this a valuable complementary reference work to conventional engineering texts.

NEW
D. M. Harland, Glasgow, UK

The Story of the Space Shuttle

In spite of the Challenger and Columbia disasters, the US Space Shuttle, which entered service in 1981, remains the most successful spacecraft ever developed. Conceived and designed as a reusable spacecraft to provide cheap access to low Earth orbit, and to supersede expendable launch vehicles, serving as the National Space Transportation System, it now coexists with a new range of commercial rockets. David Harland's definitive work on the Space Shuttle explains the scientific contribution the Space Shuttle has made to the international space programme, detailing missions to Mir, Hubble and more recently its role in the assembly of the International Space Station.

Patrick Moore’s Practical Astronomy Series

1.001 Celestial Wonders to See Before You Die
The Best Sky Objects for Star Gazers
This guide to the night sky’s brightest and most fascinating objects features celestial bodies that are accessible to amateur astronomers using medium-sized telescopes. With its chronological target list, you can enjoy sky-watching on any night of your choice.

G. McCauley, Westfield, IN, USA
25 Unique Telescope Accessories You Can Build on a Budget
Here is an excellent collection of easy projects to build on a budget, with detailed diagrams, material lists, and assembly instructions. All can be made using common tools and materials available from hardware stores, and simple items found around the home.

R. L. Clark, Westminster, MD, USA
Amateur Telescope Making in the Internet Age
Finding Parts, Getting Help, and More
This is a book about making telescopes from available parts. It provides guidance on where to look and what to look for in selecting items for telescope making and explains how to assemble these components to produce an excellent instrument on a tight budget.

T. Aranda, Chicago, IL, USA
Annotated Catalogue of 3,000 Deep-Sky Objects
This book lists 3,000 deep-sky objects visible from the northern hemisphere, described as they appear in the author’s powerful binocular telescope. The contents are organized by position for easy identification, and indexed by name and catalog numbers.

M. Peston, Romford, UK
A User’s Guide to the Meade LXD55 and LXD75 Telescopes
This book offers a comprehensive introductory guide to “choosing and using” a series LXD55 or LXD75 computer-controlled (“goto”) telescope, containing a wealth of useful information for both beginners and more advanced practical amateur astronomers. The manufacturer’s manuals are not nearly detailed enough to be of real help to beginners. No other book offers advanced techniques for more experienced LXD series users.

M. E. Bakich, Milwaukee, WI, USA

** Astrophysics is Easy!**
An Introduction for the Amateur Astronomer

Astrophysics is often - with some justification - regarded as incomprehensible without at least degree-level mathematics. Consequently, many amateur astronomers skip the math, and miss out on the fascinating fundamentals of the subject. In Astrophysics Is Easy! Mike Inglis takes a quantitative approach to astrophysics that cuts through the incomprehensible mathematics, and explains the basics of astrophysics in accessible terms. The reader can view objects under discussion with commercial amateur equipment.

How to Photograph the Moon and Planets with Your Digital Camera

Fully updated and revised, this volume reveals techniques to photograph space with a digital camera. New technological developments are included, and the text has been expanded to cover H-alpha light, photographing constellations and basic post-imaging processing.

Available

Hunting and Imaging Comets

Hunting and Imaging Comets provides readers with the knowledge and techniques necessary to discover, monitor, and photograph comets. The discovery of comet fragments in SOHO image data is also discussed, as well as CCD monitoring of older comets prone to violent outbursts.

Available
2011. XIV, 394 p. 170 illus., 20 in color. (Patrick Moore’s Practical Astronomy Series, Series 0) Softcover

Measure Solar System Objects and Their Movements for Yourself!

This enriching book shows amateur astronomers how to measure planetary sizes and distances for themselves, as well as orbital speeds. Written in an entertaining, anecdotal style, only a basic knowledge of geometry is required.

Available
2009. XV, 173 p. 80 illus. (Patrick Moore’s Practical Astronomy Series) Softcover

Navigating the Night Sky

How to Identify the Stars and Constellations

This book will interest anyone who marvels at the night sky and would like to learn to recognise constellations and identify the brightest stars by name. Renowned amateur astronomer, Guilherme de Almeida, dispels the myth that specialist knowledge and elaborate instruments are a prerequisite for all astronomical observation. His book emphasizes the point that getting to know the night sky with the naked eye is an essential platform from which to start any astronomical observation. Step-by-step, the reader is guided through the knowledge needed to recognise key constellations, identify stars and planets, and interpret changes in the overall appearance of the sky throughout the year. The text is enhanced by the use of maps and illustrations, making this practical guide an invaluable text for all but the most advanced amateur astronomers.

Available
2004. XII, 205 p. 105 illus. (Patrick Moore’s Practical Astronomy Series) Softcover

Observing the Messier Objects with a Small Telescope

In the Footsteps of a Great Observer

Presenting descriptions and photographs of the 103 Messier objects, this volume describes how they can be located without a computerized telescope or even setting circles. Illustrations show how the objects appear through a 127mm Maksutov (and other instruments, where applicable).

Due March 2011
2011. 224 p. 130 illus., 10 in color. (Patrick Moore’s Practical Astronomy Series) Softcover

Practical Amateur Spectroscopy

This book contains everything an amateur astronomer needs to know to begin observing whilst going relatively deeply into the subject for those who are already involved. Covers a very wide range of available equipment, from simple DIY spectroscopes to the most expensive commercially-made instruments. Describes basic principles so that the reader understands how to analyse the spectra he/she sees or records. Contributions by leading amateur astronomers from the USA and Europe.

Available

**Setting-Up a Small Observatory: From Concept to Construction**

This is a superb book for intermediate-level astronomers. It tells you everything you need to know about smaller-scale observatories, and how to set one up. It draws on the author’s practical experience and that of many other experienced amateur astronomers.

**So You Want a Meade LX Telescope!**

**How to Select and Use the LX200 and Other High-End Models**

For anyone considering buying a high-end Meade telescope, this book offers an experienced user’s guide to what can actually be achieved with it. It also offers a guide to the many software packages available to aid optimizing and actually using the scope.

Available
2010. XV, 191 p. 100 illus., 15 in color. (Patrick Moore’s Practical Astronomy Series) Softcover

**The 100 Best Astrophotography Targets**

A Monthly Guide for CCD Imaging with Amateur Telescopes

This is the first guidebook to specifically target the best objects for backyard astrophotography. It reveals, for each month of the year, the choicest celestial treasures within the reach of a commercial CCD camera and how to get the most spectacular results.

**Starlight**

An Introduction to Stellar Physics for Amateurs

This book tells the amazing story of the physics of stars and starlight. While it is an in-depth study of stellar astrophysics, at the same time it requires only basic high school mathematics and physics, making it accessible to almost all amateur astronomers.

Available
2009. IX, 277 p. 74 illus. (Patrick Moore’s Practical Astronomy Series) Softcover

**M. Swanson**

**The NexStar User’s Guide**

Michael Swanson’s online discussions with literally thousands of NexStar owners make it clear that there was a desperate need for a book such as this – one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners – there is a chapter on “Astronomy Basics” – and experts alike.

Celestron’s NexStar telescopes were introduced in 1999, beginning with their first computer controlled “go to” model, a 5-inch. More models appeared in quick succession, and Celestron’s new range made it one of the two dominant manufacturers of affordable “go to” telescopes.

The Rainbow Sky
An Exploration of Colors in the Solar System and Beyond

There are numerous astronomical and meteorological phenomena involving color, many visible with the unaided eye or modest telescope. This reference details easy-to-follow techniques to see and photograph these phenomena. It includes over 300 photographs.

Available 2010. XVIII, 359 p. 322 illus. in color. (Patrick Moore's Practical Astronomy Series) Softcover

Using the Meade ETX
100 Objects You Can Really See with the Mighty ETX

The Meade ETX range of telescopes is one of the most successful ever made. It is low-cost, has sold in its tens of thousands, and is available in almost every country. Here, ETX expert Mike Weasner reveals everything any amateur astronomer ever wanted to know about the telescope. First book dedicated entirely to the ETX. Written by an acknowledged world authority. Describes the "best" 100 objects to begin observing. Contains detailed hints and tips aimed at getting the best out of the ETX. Features imaging (photographic and digital) as well as visual observing.
