Transcultural Turbulences

Towards a Multi-Sited Reading of Image Flows

Today, hardly anything moves as fast across the globe as images and media. This fact opens new avenues to explore social and cultural change, but also poses new theoretical challenges of how to grasp and better understand these changes and flows. Moreover, such movements across geophysical and cultural borders have a historical depth that enables us to explore globalisation and localisation in new ways. Transculturality is still a relatively new field of research in the Humanities through which we sharpen our competence and ‘literacy’ to come to terms with the complexity of globalised cultures. This volume ventures into new domains of research on the transculturality of images and addresses the need to develop new or modify established often ethno- and Eurocentric interpretations of what happens when images travel. It does so by bringing together cutting-edge research from fields such as art history, cultural anthropology, colonial history, Islamic studies, religious studies and literary criticism.

Features

Today, hardly anything moves as fast across the globe as images and media. This fact opens new avenues to explore social and cultural change, but also poses new theoretical challenges of how to grasp and better understand these changes and flows. Moreover, such movements across geophysical and cultural borders have a historical depth that enables us to explore globalisation and localisation in new ways. [...]
Lymphoma and Leukemia of the Nervous System

This is the second edition of a book called "Lymphoma of the Nervous System," which was published by Butterworth-Heinemann (B-H) in 2004. Lymphoma and Leukemia of the Nervous System is a comprehensive review of this challenging group of diseases and should be useful for the practicing neurologist, hematologist, oncologist and for any practitioner involved in the management of these patients.

Features

Lymphomas and leukemias of the nervous system result in devastating neurological complications and high mortality. These malignancies may arise within the central nervous system or may disseminate to the brain or cerebrospinal fluid from a source elsewhere in the body. Early diagnosis and therapeutic intervention lead to improvement in neurological symptoms and signs and potentially improved survival. [..]

Contents

Foreword - Preface - Part I - Introduction - Chapter 1 - Overview of the Lymphomas – Jill Lacy, Julie Vose - Part II - Central Nervous System Lymphomas - Chapter 2 - Epidemiology - Brian O’Neill, Ingrid Haldorsen - Chapter 3 - Pathological features of CNS lymphomas - Judith Ferry, Rolf Pfannl, Nancy Harris - Part III - Primary CNS lymphoma - Chapter 4 - Epidemiology - Brian O’Neill, Ingrid Haldorsen - Chapter 5 - Biology - James Rubenstein - Chapter 6 - Diagnostic Considerations - Tracy Batchelor, Daphne Wang, Edward Neuwelt, Gilbert Gonzalez - Chapter 7 - Radiation and Combined Modality -

Biomedicine

Control of Innate and Adaptive Immune Responses during Infectious Diseases

Upon infection the host needs to mount vigorous immune response against pathogen in order to successfully control its replication. However, once the infectious agent is controlled or eliminated, host cells need to signal the immune system to slow or cease its activities. While vast knowledge has been accumulated through the years on the mechanisms involved in the initiation and effector phases of the immune responses, the pathways triggered in order to modulate or end innate and acquired immunity are becoming more evident as evidence for its relevance comes to surface. Due to its biological power, evidence has surfaced indicating that eventually pathogens may take advantage of such regulatory pathways in order to escape effector mechanisms and progress to persistence. This book will discuss several cellular pathways involved in controlling immune response in the context of infectious diseases, their biological consequences and potential "hijack" of these pathways for the benefit of pathogen leading.[..]

Multi-System Endocrine Disruption

Endocrine disruption is an expanding field due to the numerous chemicals involved and, as evidenced more recently, the variety of homeostatic systems that they can alter throughout life. The gathering of experts from all over the world should help to identify health disorders that are possibly or likely related to exposure to endocrine disrupters. The research needs have been discussed as well as recommendations prioritizing target groups and following the precautionary principle.

Gene Regulatory Networks

Methods and Protocols

Gene regulatory networks play a vital role in organismal development and function by controlling gene expression. With the availability of complete genome sequences, several novel experimental and computational approaches have recently been developed which promise to significantly enhance our ability to comprehensively characterize these regulatory networks by enabling the identification of respectively their genomic or regulatory state components, or the interactions between these two in unprecedented detail. Divided into five convenient sections, Gene Regulatory Networks: Methods and Protocols details how each of these approaches contributes to a more thorough understanding of the composition and function of gene regulatory networks, while providing a comprehensive protocol on how to implement them in the laboratory. Written in the highly successful Methods in Molecular Biology™ series format, chapters contain introductions to their respective topics, lists of the necessary materials and reagents, and comprehensive, authoritative, and up-to-date protocol narrative. Authoritative and comprehensive, Mood and Anxiety Related Phenotypes in Mice: Characterization Using Behavioral Tests, Volume II serves as a complement to the previous volume in order to offer a comprehensive resource for the behavioral approaches that are valuable for the characterization of mood and anxiety disorder-related behaviors in mice and the techniques that are utilized in the development of effective medications.

As a collection presented in the Neuromethods series, each chapter provides a brief background and review of the test or model as well as a complete and up-to-date protocol narrative. Authoritative and comprehensive, Mood and Anxiety Related Phenotypes in Mice: Characterization Using Behavioral Tests, Volume II serves as a complement to the previous volume in order to offer a comprehensive resource for the behavioral approaches that are valuable for the characterization of mood and anxiety disorder-related behaviors in mice and the techniques that are utilized in the development of effective medications.

Features

Preclinical research related to mood and anxiety disorders relies extensively upon mouse behavioral tests and models, the use of which continues to increase as a greater number of underlying susceptibility genes are discovered, new targets for medications are identified, and clinical studies reveal novel neurobiological risk factors.

Mood and Anxiety Related Phenotypes in Mice: Characterization Using Behavioral Tests, Volume II serves as a complement to the previous volume in order to offer a comprehensive resource for the behavioral approaches that are valuable for the characterization of mood and anxiety disorder-related behaviors in mice and the techniques that are utilized in the development of effective medications.

Contents

Longitudinal Assessment of Deliberate Mouse Behavior in the Home Cage and Attached Environments: Relevance to Anxiety and Mood Disorders.- Using Behavioral Patterns Across Species in Mood Disorder Research.- Telemetry in Mice: Applications in Studies of Stress and Anxiety Disorders.- Modeling Mouse Anxiety and Sensorimotor Integration: Phenotypes in the Suok Test.- Assessment of Social Approach Behavior in Mice.- The Mouse Defense Test Battery: A Model Measuring Different Facets of Anxiety-Related Behaviors.- Novelty-Suppressed Feeding in the Mouse.- The Four-Plate Test in Mice.- The...[

Tumors of the Central Nervous System, Volume 5

Astrocytomas, Hemangioblastomas, and Gangliogliomas

The most recent developments in diagnostic and therapeutic aspects of Gliomas (glioblastoma) in the brain are presented. The importance of personalized medicine and clinical validation for targeted therapy are discussed. The identification of various types of biomarkers (determined by molecular genetics) is included, along with their advantages and limitations as markers in tumor detection and diagnosis. The identification and validation of brain cancer (glioblastoma) genes are discussed. The role of cancer stem cells in the initiation and persistence of malignant gliomas is explained; response of glioblastoma cancer stem cells to various growth factors, such as epidermal growth factor receptor kinase inhibitor, is explained. The use of surgical resection, chemotherapy (e.g., temozolomide), immunotherapy, and radiation therapy for glioblastoma patients is included. Biological impediments for chemotherapy and radiotherapy for malignant glioblastoma are pointed out. Standard (established) as well as[...]

Influenza Virus Sialidase - A Drug Discovery Target

Influenza continues to be an ongoing problem despite the existence of vaccines and drugs. Disease outbreaks can occur relatively quickly as witnessed with the recent emergence of the influenza virus A/H1N1 pandemic. The development of new anti-influenza drugs is thus a major challenge. This volume describes all aspects of the virus structure and function relevant to infection. The focus is on drug discovery of inhibitors to the enzyme sialidase, which plays a key role in the infectious lifecycle of the virus. Following an overview of the influenza virus, the haemagglutinin, the interactions with the cell receptors and the enzymology of virus sialidase, recent results in drug design are presented. These include a full coverage of the design, synthesis and evaluation of carbohydrate as well as non-carbohydrate influenza virus sialidase inhibitors. Further reviews of the clinical experience with influenza virus sialidase inhibitors and of the development of resistance to these inhibitor drugs[...]

Contents
Influenza Virus Virology. - Investigating the interaction between influenza and sialic acid – making and breaking the link. - Enzymology of Influenza Virus Sialidase. - Influenza Virus Sialidase and Structure-Based Drug Design. - The Development of Carbohydrate-based Influenza Virus Sialidase Inhibitors. - The Development of Non-carbohydrate-based Influenza Virus Sialidase Inhibitors. - Clinical Experience with Influenza Virus Sialidase Inhibitors. - Resistance Development to Influenza Virus Sialidase Inhibitors.

A History of Diabetes in Pregnancy

The impact of maternal diabetes on offspring prenatal development and survival

Type 1 diabetes is a serious and common disease, afflicting one per 200 of the population worldwide. It is widely believed to cause harmful physical maldevelopment—congenital malformations—and other consequences in the unborn children of women with the disease. This book considers the history of the disease in pregnant women and this belief that it causes anomalies since the time of the discovery of insulin in 1921, and presents a profound and critical appraisal of the subject of its supposed prenatal harmfulness.

Current Topics in Innate Immunity II

Mounting evidence in the past decade indicates that innate immunity mediates functions above and beyond first-line defense against infection. It is now appreciated that innate immune mechanisms are critically involved in the development of adaptive immunity and, moreover, the regulation of diverse physiological and homeostatic processes. The latter explains why deregulation of innate immunity may lead to pathological disorders that are not necessarily or directly related to host defense. This Volume compiles the latest advances in this rapidly evolving field as presented by eminent scientists at the 7th International Aegean Conference on Innate Immunity in Rhodes, Greece. It includes topics related to the biology and function of Toll-like and other pattern-recognition receptors, complement and its crosstalk with other physiological systems, inflammatory mechanisms and diseases, natural killer cells, and the cooperative interplay between innate and adaptive immune cells. This book is an excellent[...]

Animal Models of Movement Disorders

Volume I

Movement is the way that animals interact with their environment and is under the organization and complex control of the brain and spinal cord. Multiple central nervous systems, including cortex, basal ganglia, cerebellum, and brainstem, interact to provide precise motor control and integration. Damage or disease within these systems cause profound motor disturbances in man, which can be effectively modeled in animals to develop a better understanding and treatment of the human condition. Animal Models of Movement Disorders introduces a variety of methods and techniques used to model and assess motor function in experimental animals from lower orders, such as drosophila and c. elegans, through vertebrate species including fish, to mammals, such as rodents and non-human primates. The most advanced contemporary models in each system are presented at multiple levels of analysis from molecular and genetic modeling, lesions, anatomy, neurochemistry, to imaging and behavior. Volume I contains general...[

Insulin-like Growth Factors and Cancer

From Basic Biology to Therapeutics

The book will detail the history, successes, and failures of targeted therapies for cancer, with a particular focus on IGF systems and cancer.

Features

The insulin-like growth factor system has been shown to play a critical role in cancer development and progression. Insulin-like Growth Factors and Cancer: From Basic Biology to Therapeutics, specifically brings these aspects to the reader. The volume covers the epidemiological aspects of the relationships between circulating insulin and IGF-1 levels and the risk for cancer and...[

Neurodegeneration

Methods and Protocols

Neurodegenerative disorders, such as Alzheimer’s and Parkinson’s disease are a growing burden on our society. Understanding and treating these common diseases is one of the major current challenges for the biomedical field. In Neurodegeneration: Methods and Protocols, experts in the field tackle this challenge and present cutting-edge analytical and technological approaches to study the mechanisms underlying neurodegenerative processes. Organizes into five sections, chapters detail protocols for isolating and culturing cells from the nervous system, production and use of animal models, characterization of cell death, analytical tools to study disease mechanisms, and therapeutic approaches for neurodegeneration. Written in the successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known [...] 

Contents

Introduction to Neurodegenerative Diseases and Related Techniques. - In vivo and In vitro Determination of Cell Death Markers in Neurons. - Degenerating Processes Identified by Electron Microscopic Immunocytochemical Methods. - Isolation and Culture of Neurons and Astrocytes from the Mouse Brain Cortex. - Isolation and Culture of Postnatal Spinal Motor Neurons. - Converting Human Pluripotent Stem Cells to Neural Tissue and Neurons to Model Neurodegeneration. - Neural Differentiation of Induced Pluripotent Stem Cells. - Developing Yeast Models of Human Neurodegenerative Disorders. - Modeling [...]

Neuropeptides

Methods and Protocols

Since the early days, the field of neuropeptide biology has dramatically widened, and today the ultimate frontiers in neuropeptide research lie in the development of pharmacologically active compounds that are capable of crossing the blood-brain barrier to exert their biological role(s) in vivo and in the construction of genetic vectors to be employed in gene therapy. Neuropeptides: Methods and Protocols presents a readily reproducible collection of established and emerging techniques for neuropeptide research as contributed by expert researchers in the field. The detailed methods presented cover subjects such as immunocytochemical localization, biochemical characterization, functional analysis, development and production of genetic probes, and the design of neuropeptide derivatives for cellular neurobiology as well as the potential therapeutic applications. Written in the highly successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics [...]

New Frontiers of Molecular Epidemiology of Infectious Diseases

Molecular epidemiology has recently broadened its focuses due to the development of molecular tools but also by incorporating advances of other fields such as mathematical epidemiology, molecular ecology, population genetics and evolution. Facing new risks of emerging and re-emerging infectious diseases that are threats for humans and their livestock, the objectives of molecular epidemiology include: - the development of molecular tools, genotyping and gene expression - the incorporation of concepts and results of population genetics of infectious diseases - the integration of recent advances in theoretical epidemiology and evolutionary ecology of diseases - a better understanding of transmission for the development of risk factors analyses. This book will demonstrate how the latest developments in molecular tools and in epidemiology can be integrated with studies of host-pathogen interactions. Besides a strong theoretical component, there will also be an emphasis on applications in the fields of [...]

Principles of Immunopharmacology

This textbook provides a unique support in gaining essential knowledge on the immune response, its diagnosis and its modification by drugs and chemicals. The first section of the book, covering a basic introduction to immunology and its relevance for human disease, has been updated to accommodate new immunological concepts. The second section on immunodiagnostics has been further expanded to describe widely used molecular techniques and is followed by a systematic coverage of drugs affecting the immune system, revised to cover recent developments. The book concludes with a chapter on immunotoxicology. This third edition continues the unique format dealing with four related topics in a single volume, obviating the need to refer to several different textbooks. New aids to the reader include a two-column format, glossaries of technical terms and appendix reference tables. The emphasis on illustrations is maintained from the first edition.

Features
Principles of Immunopharmacology provides a unique source of essential knowledge on the immune response, its diagnosis and its modification by drugs and chemicals. The third edition of this internationally recognized textbook has been revised to include recent developments, but continues the established format, dealing with four related fields in a single volume, thus obviating the need to refer to [...] Contents

Blood in Motion

Blood in Motion is a textbook in Cardiovascular Science. It sets out to introduce, entice and explain the cardiovascular system to the reader using a classical system in teaching: anatomy, physiology, general operation and specific systems. It is specifically designed to support the interests of students, experienced physiologists and clinicians. The book is subdivided into three parts, comprising a total of 11 chapters. Part I presents an historical perspective of cardiovascular knowledge and complements it with current insight into the physiology of the cardiovascular system. Part II explores sections of the circulatory loop, starting with an in-depth treatment of the veins, and including the lymphatic, the microcirculation, the arterial system and the heart. Part III incorporates approaches to the cardiovascular system as a whole, both in physiology and in science, such as modeling. This section introduces impedance-defined flow and offers the reader its application in mathematical modeling. At [...] Features

Gene Expression Profiling

Methods and Protocols
Understanding gene expression and how it changes under normal and pathological conditions is essential to our understanding of the fundamentals of cell biology through to the targeted treatment of disease. In Gene Expression Profiling: Methods and Protocols, Second Edition, experts in their particular fields compile detailed protocols for a broad range of techniques, currently available and being further developed, for the analysis of gene expression at the DNA, RNA, and protein levels. Written in the highly successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Practical and easy-to-use, Gene Expression Profiling: Methods and Protocols, Second Edition presents a collection of clearly described and illustrated chapters, certain to be helpful to researchers in academia, in [...] Features

**DNA Topoisomerases and Cancer**

DNA topoisomerases represent an essential family of DNA processing enzymes and a large number of topoisomerase inhibitors are used clinically for the treatment of various human cancers. Novel drugs are in clinical development both against type I and type II topoisomerases. The book will include basic biochemical and structural reviews for the cancer-relevant topoisomerases. It will describe how topoisomerase dysfunctions can damage the genome and increase the risk of cancers, and the involvement of topoisomerases in programmed cell death. The book will also present the various topoisomerase inhibitors in clinical use and development and their molecular and cellular mechanisms of action.

**Features**

DNA topoisomerases are present in all living organisms and are essential to maintaining the helical structure of DNA. They are highly relevant for cancer because a number of anti-cancer drugs selectively target two of the human enzymes, DNA topoisomerase I and II. These drugs convert topoisomerases into cellular poisons by trapping the enzymes as they cleave DNA. The book starts out with a detailed outline of [...]
Natural Killer T cells

Balancing the Regulation of Tumor Immunity

This book will cover primary roles of NKT cells in immunity to cancer, in both mouse tumor models and cancer patients. There are several chapters describing general aspects of NKT cells.

Features

Natural killer T (NKT) cells are CD1d-restricted T cells that respond to lipid, not protein, antigens presented by CD1d, which is a non-classical MHC class I-like molecule. This relatively small but pivotal T cell population bridges the gap between innate and adaptive immunity by rapidly produce large amounts of many kinds of cytokines and by providing the T cell arm of the adaptive immune system.

Intradermal Immunization

This volume of Current Topics in Microbiology and Immunology covers diverse topics related to intradermal immunization. The chapters highlight the effectiveness of intradermal immunization in experimental animal models or in clinical practice, all supporting the view that intradermal immunization is at least as good as other immunization routes. Keeping in mind that current vaccines are not specially designed for intradermal immunization, but show comparable efficiency even at reduced dosages, this underlines the great potential for the skin as a vaccination site. Hopefully, the overview in this volume will encourage vaccine designers to focus on this promising immunization route, and in addition, to inspire them to develop vaccines that are especially optimized for intradermal immunization.

Features

Despite the impressive success of current vaccine programs, there remains a need to improve the effectiveness of current vaccines. A more powerful and longer lasting immune response induced by smaller and fewer doses of vaccine is an exciting challenge. Improvement of effectiveness also enables induction of protective immunity in populations that respond poorly to vaccination, for example elderly or[.]...

Contents

Preface.- Understanding the murine cutaneous dendritic cell network to improve intradermal vaccination strategies.- Insight into the immunobiology of human skin and cutaneous dendritic cell subsets to perfection intradermal vaccination design.- Delivery systems for intradermal vaccination.- Targeting skin dendritic cells to improve intradermal immunization.- Intradermal Rabies vaccination: the evolution and future of pre- and post-exposure prophylaxis.- Intradermal vaccination to protect against yellow fever and influenza.- The dermis as a portal for dendritic cell-targeted immunotherapy[.]...

Gene Vaccines

The induction of antigen-specific immune responses after in vivo transfection with expression plasmids has triggered a revolution of vaccine research. After a first hype, evoked by the fascinating options of this method, clinical studies did not reach the ambitious aims and a phase of disillusion ensued. It became obvious that Gene vaccines displayed a weaker immunogenicity in humans than had been observed in the mouse models. Meanwhile these hurdles have been overcome and gene vaccines undergo a renaissance. The present book gives an update of the “world of naked gene vaccines”, namely DNA and RNA vaccines. Its content ranges from general mechanisms, inherent immunostimulatory properties and the vast potential to modulate immune responses, to recent successful clinical studies and approved veterinary gene vaccines.

Beyond the state-of-the-art of genetic immunization, the reader will be stimulated with a chapter addressing “burning questions”.

Features

The induction of antigen-specific immune responses after in vivo transfection with expression plasmids has triggered a revolution of vaccine research. The Springer Index of Viruses

The continuous growth of knowledge makes it very difficult for scientists to retrieve comprehensive and accurate data on viruses. The desired information is often dispersed in a variety of books, journals and online resources. This encyclopedia presents the latest facts about all known virus in a standardized form created by hundreds of the world’s leading virologists. Virus taxonomy represents the basic framework that allows an understanding of the complex evolutionary process that continuously takes place among viruses and their hosts. Each of the 300 taxonomically ordered chapters includes detailed information on individual genus members, historical events, the hosts they can affect (animal, man or plant), virion morphology, genome properties, replication strategy, properties of individual transcription and proteins, sequence accession numbers, biological properties, diseases, recombinant vector constructs, vaccine strains, key references, as well as a high-resolution particle image and a drawing.[...]

Epigenetics Protocols

The field of epigenetics has played a major role at the forefront not only of molecular biology, but also of medical genetics and clinical medicine. Few disciplines have experienced growth comparable to that which we have witnessed for epigenetics in the past decade. The goal of Epigenetics Protocols, Second Edition is to highlight select techniques that have been mainstays in the field as well as to cover methods that are especially relevant to extant discoveries in epigenetics. This volume focuses on the two broad areas of epigenetics: DNA methylation and chromatin modifications, and also covers the complex topic of computational methods for epigenetic analyses which is essential to a complete understanding of the vast body of information that is being derived from the use of these newly-developed tools. Written in the highly successful Methods in Molecular Biology “series format, chapters contain introductions to their respective topics, lists of the necessary materials and reagents,[...]

Controlled Release in Oral Drug Delivery

Controlled Release in Oral Drug Delivery provides focus on specific topics, complementing other books in the initial CRS series. Each chapter sets the context for the inventions described and describe the latitude that the inventions allow. In order to provide some similar look to each chapter, the coverage includes the historical overview, candidate drugs, factors influencing design and development, formulation and manufacturing and delivery system design. This volume was written along three main sections: the relevant anatomy and physiology, a discussion on candidates for oral drug delivery and the major three groups of controlled release systems: diffusion control (swelling and inert matrices); environmental control (pH sensitive coatings, time control, enzymatic control, pressure control) and finally lipidic systems.

Features
Controlling the rate, extent and time of a drug’s delivery can optimize its performance in many ways, relative to “immediate release” delivery. Such optimized design requires a broad knowledge base of topics such as gastro intestinal tract physiology, polymer science, and the mechanisms by which drugs are released from the formulated units. Technologies to “reduce to practice” also need to be carefully [...]

Business & Economics

Recent Developments in Vector Optimization

We always come cross several decision-making problems in our daily life. Such problems are always conflicting in which many different view points should be satisfied. In politics, business, industrial systems, management science, networks, etc. one often encounters such kind of problems. The most important and difficult part in such problems is the conflict between various objectives and goals. In these problems, one has to find the minimum (or maximum) for several objective functions. Such problems are called vector optimization problems (VOP), multi-criteria optimization problems or multi-objective optimization problems. This volume deals with several different topics / aspects of vector optimization theory ranging from the very beginning to the most recent one. It contains fourteen chapters written by different experts in the field of vector optimization.

Stochastic Optimization Methods in Finance and Energy
New Financial Products and Energy Market Strategies

This volume presents a collection of contributions dedicated to applied problems in the financial and energy sectors that have been formulated and solved in a stochastic optimization framework. The invited authors represent a group of scientists and practitioners, who cooperated in recent years to facilitate the growing penetration of stochastic programming techniques in real-world applications, inducing a significant advance over a large spectrum of complex decision problems. After the recent widespread liberalization of the energy sector in Europe and the unprecedented growth of energy prices in international commodity markets, we have witnessed a significant convergence of strategic decision problems in the energy and financial sectors. This has often resulted in common open issues and has induced a remarkable effort by the industrial and scientific communities to facilitate the adoption of advanced analytical and decision tools. The main concerns of the financial community over the last decade [...]

Family Firms in Transition

Case Studies on Succession, Inheritance, and Governance

Many of the challenges faced by family-owned businesses develop after the firm has reached a stage of maturity, when the first generation is faced with issues concerning the role of their children in the business and the long-term future of the enterprise. This collection of case studies from around the world demonstrates how governance of both the business and the family (or lack thereof) impacts succession of leadership in the firm and the inheritance of ownership and wealth. It is the role of governance and how it impacts both family and firm that link these family business cases together with succession and inheritance. These topics have been clustered together because the social systems of the family and the management system of the firm have significant impacts on the success, or failure, of succession plans. All the planning in the world for succession and inheritance will not succeed if the firm does not have a well established and functional governance system. Likewise, if the family[...]

Econometric Analysis of Carbon Markets

The European Union Emissions Trading Scheme and the Clean Development Mechanism

Through analysis of the European Union Emissions Trading Scheme (EU ETS) and the Clean Development Mechanism (CDM), this book demonstrates how to use a variety of econometric techniques to analyze the evolving and expanding carbon markets sphere, techniques that can be extrapolated to the worldwide marketplace. It features stylized facts about carbon markets from an economics perspective, as well as covering key aspects of pricing strategies, risk and portfolio management.

EU Eastern Neighborhood

Economic Potential and Future Development

The selected papers in this volume were prepared under the research project on "EU Eastern Neighborhood: Economic Potential and Future Development (ENEPO)" funded by the EU Sixth Framework Program. They discuss the broad spectrum of development issues in the EU Eastern Neighborhood and economic relations between the enlarged EU and its Eastern neighbors in the former USSR. Individual chapters address areas of economic and social development, trade, energy, investment, migration, costs and benefits of economic reforms, development assistance and political economy of policy reforms. In particular, they examine interrelations and mutual synergies between trade liberalization, inflow of foreign investment, economic and institutional reforms and a reduction of income and development disparities. The publication thus closes an important knowledge gap in respect to the economic, social and institutional development of the CIS region and its economic relations with the EU.

Manifesto of the New Economy

A. Dolgin, Moscow State School of Economics, Moscow, Russia

Institutions and Business Models of the Digital Society

The book describes the main directions for the development of the digital society. The author argues that social networks would evolve; what profit can be made of different forms of informational collaboration (crowsourcing, collaborative filtering). And, the main thing, how it will influence the structure of the society and human pursuit for happiness. The author does not confine himself to a theory, he sets and solves practical questions: How talent, success and “stardom” are interconnected, how to make money in social networks, what is the business model for the development of entertainment and media, how to measure cultural values, and what is the subjective time of the individual and how to make it qualitative? There have been no answers to these questions before. Internet and social networks have provided tools and data that Alexander Dolgin was the first to use in economics.

Features

How do social networking services earn money? What is the “second hand of the market” and how does it operate? Why does society need so many different kinds of goods? What does happiness economics not reveal about happiness? What is the link between talent, success and “stardom”? What is the business development model for the entertainment and media?…

Contents

The second invisible hand of the market. - The Symbolic Economics approach to the humanities and humanitarian practices.

Information Systems Theory

Explaining and Predicting Our Digital Society, Vol. 1

Y. K. Dwivedi, Swansea University, Swansea, Wales, United Kingdom; M. R. Wade, York University, Toronto, Ontario, Canada; S. L. Schneberger, Principia College, Elsah, Illinois, USA (Eds.)

The overall mission of this book is to provide a comprehensive understanding and coverage of the various theories and models used in IS research. Specifically, it aims to focus on the following key objectives: To describe the various theories and models applicable to studying IS/IT management issues. To outline and describe, for each of the various theories and models, independent and dependent constructs, reference discipline/originating area, originating author(s), seminal articles, level of analysis (i.e. firm, individual, industry) and links with other theories. To provide a critical review/meta-analysis of IS/IT management articles that have used a particular theory/model. To discuss how a theory can be used to better understand how information systems can be effectively deployed in today’s digital world. This book contributes to our understanding of a number of theories and models. The theoretical contribution of this book is that it analyzes and synthesizes the relevant literature in order...

Export Assistance: The Way Back and Forward

An Empirical Investigation into Developing Country “Born Globals”

“Born global” (BG) firms have attracted many researchers throughout the last decade. The emergence of this phenomenon initially posed a serious challenge to the validity and applicability of the traditional “stage” theory of internationalization; however, scholars have more recently been able to reconcile traditional and new theories into a single framework for studying the process of internationalization. This volume applies both network theory and knowledge-based theory to analyze export assistance in the context of internationalization of low-tech BG firms in developing countries (with an in-depth study of the apparel industry in Bangladesh). The findings that non-governmental network partners provide more useful advice than government agencies is one that may resonate through other countries, including developed economies. Government’s more useful role is confined to the financial support and incentives that are provided to such firms. It is, however, the commitment to exporting that...

Bio-Economic Models applied to Agricultural Systems

This book has the purpose of providing the “state of the arts” concerning bio-economic modelling dealing with agricultural systems. In most cases, the contributions use a methodology combining the use of biophysical and economic models, in all cases, an engineering production function approach is totally or partially applied. This practice is being developed in the last years as a response to concrete policy matters: agricultural policies are increasingly combined with environmental and natural resources policies, and this reality involves the need of an integrated assessment, that current economic models are not able to provide.

Features

The bio-economic modeling approach presented in this book is a result of two distinct developments: by one side, the improvement of bio-physical simulation models applied to agricultural systems and by the other, the evolution of agricultural policies demanding a kind of assessment that conventional economic models are not able to provide. Some economists began to realize that biophysical models could be [...] Contents

Acknowledgments. Preface. Part I. - Ch. 1. Modelling the relationship between agriculture and the environment using bio-economic models: some conceptual issues. - Ch. 2. Bio physical models as detailed engineering production functions. - Ch. 3. Dynamic optimisation problems: Different resolution methods regarding agriculture and natural resource economics. - Ch. 4. Biophysical models for cropping system simulation. - Part II. - Ch. 5. Incorporating yield information from a biogeochemical model into an agricultural production model to infer adoption of a new bioenergy crop. - Ch. 6. [...] Fields of interest

A Century of Sovereign Ratings

The financial difficulties experienced by Greece since 2009 serve as a reminder that countries (i.e., sovereigns) may default on their debt. Many observers considered the financial turmoil was behind us because major advanced countries had adopted stimulus packages to prevent banks from going bankrupt. However, there are rising doubts about the creditworthiness of several advanced countries that participated in the bailouts. In this uncertain context, it is particularly crucial to be knowledgeable about sovereign ratings. This book provides the necessary broad overview, which will be of interest to both economists and investors alike. Chapter 1 presents the main issues that are addressed in this book. Chapters 2, 3, and 4 provide the key notions to understand sovereign ratings. Chapter 2 presents an overview of sovereign rating activity since the first such ratings were assigned in 1918. Chapter 3 analyzes the meaning of sovereign ratings and the significance of rating scales; it also describes the...

Practice-Driven Research on Enterprise Transformation

Third Working Conference, PRET 2011, Luxembourg, September 6, 2011, Proceedings

This volume constitutes the proceedings of the Third Working Conference on Practice-Driven Research on Enterprise Transformation (PRET), held in Luxembourg, on September 6, 2011, as the industrial track of the 13th IEEE Conference on Commerce and Enterprise Computing (CEC 2011). The third edition of PRET marks a close collaboration between academia and practice. With the specific purpose of mutual learning and crossfertilization, top practitioners from industry were invited to submit case studies. To give them enough space for presentation, only four academic papers were accepted. These papers were submitted with a length of 25 pages to enable a more detailed coverage of the related research and to stimulate further discussions during the conference. The topics covered are Enterprise Architecture, Business and IT Alignment, and Business Process Management and Evaluation.

Sustainability Innovations in the Electricity Sector

The future of modern societies depends on their ability to deal with the challenge of climate change in the coming decades. One essential component is a better understanding of innovation processes in the energy sector. This book focuses on sustainability innovations in renewable energies, combined heat and power, and energy service contracting, and analyses the institutions, actors and functions within the innovation system. Of particular interest is the question of whether the joint effect of EU-driven market liberalization and climate policies will succeed in establishing market forces that will drive actors towards more climate-friendly energy production. A special focus is on the role of local utilities in the electricity sector as opposed to large transmission net operators or regional net operators. The countries covered in the contributions include Germany, Denmark, the UK, Switzerland, and the Netherlands.

Features

Violence and Aggression in Sporting Contests

Economics, History and Policy

Sporting contests have provided mass entertainment throughout history, and today generate revenues of approximately $200 billion annually in the US alone. Like in the entertainment industry, the modern sports industry’s revenues are based on the entertainment value of output and more entertaining sporting contests imply greater game-day attendance, television revenues and sales of merchandise. Research by economists has attempted to understand and explain behavior as it relates to sporting contests, showing that standard microeconomic theory used to explain consumer and producer behavior can also be applied to the behavior of fans, team owners, league executives and players. One commonality among many ancient and modern sports is the existence of violence and aggression in contests. Compare, for example, a modern NASCAR race with a Roman chariot race: Only the technology has changed. From the perspective of an economist, violence in sporting contests is an outcome of the forces of supply and[…]

<td></td>
<td>Community-based operations research (CBOR) is the use of analytical methods with government and organizations in the formal and informal non-profit sector to improve the lives of individuals and communities. The beneficiaries of these methods tend to be localized, as well as members of disadvantaged and underserved groups. Examples of problems amenable to CBOR include: design of public infrastructure such as parks and public art; location of facilities such as homeless shelters or elder care facilities; social interventions such as public health initiatives or anti-violence programs, and improved processes such as grants management or human service provision, among many others. Solutions to these problems may be difficult and/or controversial due to conflicting notions of fairness, social impacts or social norms, or because of stigmatized or marginalized populations. CBOR applications address the needs of organizations working for the public good which typically have limited exposure to operations[...].</td>

Risk Management of Supply and Cash Flows in Supply Chains

Risk management has become an essential issue in supply chain management, from the modeling of the decision maker’s risk preference, and the studies on uncertain elements such as demand, supply, price, lead time, etc., to the consideration of more practical background including cash flow constraints, inventory financing and delayed cash payment. In this new volume, the authors provide a framework to study the interaction of various factors related to risk and their influence on supply chain management. The scope of areas covered includes operations management, decision analysis, and business administration. This book focuses on several key issues of risk management in supply chains. Specifically, an analysis framework is presented for studying the supplier selection problem and identifying the optimal sourcing strategy in a one-retailer two-suppliers supply chain with random yields. The optimal sourcing strategy of a retailer and the pricing strategies of two suppliers under an environment of supply [...]
**Gesundheits- und Sozialpolitik im Diskurs**

Festschrift für Engelbert Theurl zum 60. Geburtstag

**Features**

Das Buch „Gesundheits- und Sozialpolitik im Diskurs“ diskutiert in mehreren Beiträgen aus einer sozial- und wirtschaftswissenschaftlichen Perspektive aktuelle Entwicklungen der Gesundheits- und Sozialpolitik. Ein Schwerpunkt liegt auf einer Analyse der österreichischen und europäischen Systeme der Gesundheits- und Sozialpolitik. Im ersten Themenblock werden Aspekte der Verteilungsproblematik behandelt. [...]
The Digital Glocalization of Entertainment

New Paradigms in the 21st Century Global Mediascape

In this volume, Paolo Sigismondi explores the dynamics of global media and entertainment, specifically analyzing the implications of the global rise of non-scripted entertainment (as reality TV programs) and the impact and consequences of the Information and Communication Technology (ICT) revolution on the content, delivery platforms, and overall business models of the media and entertainment landscape. This work aims at bridging the gap between media theories and industry practices in a rapidly evolving global mediascape, building on scholarship in the field and enriched by case studies and insights from business practice. This work demonstrates that the paradigms of the landscape are shifting, introducing the digital "glocalization" of entertainment, through which successful media crossing national and cultural borders incorporate both global and local features. Key questions raised include: Is the ICT revolution an example of disruptive technology for the global media and entertainment industry?[...]

Features

Common Corporate Tax Base in the EU

Impact on the Size of Tax Bases and Effective Tax Burdens

The European Commission envisages putting forward a proposal for a tax reform that would allow improving the efficiency and simplicity of the corporate income tax systems. This report assesses the impact of a Common Corporate Tax Base (CCTB) on the size of the corporate tax bases of EU companies. The results of the report shall help to evaluate the economic consequences of the introduction of a harmonised set of tax accounting rules. The estimates are based on the European Tax Analyzer with data from the year 2006 and apply options specified by the Commission's Steering Group.

Features

**Fine Particles in Medicine and Pharmacy**

Pharmaceutical manufacture is very exacting – for example, drugs must be uniform in size, shape, efficacy, bioavailability, and safety. The presence of different polymorphs in drug production is a serious problem, since different polymorphs differ in bioavailability, solubility, dissolution rate, chemical and physical stability, melting point, color, filterability, density, and flow properties. Fine Particles in Medicine and Pharmacy discusses particle size, shape, and composition and how they determine the choice of polymorph of a drug.

**Features**

- Pharmaceutical manufacture is very exacting – for example, drugs must be uniform in size, shape, efficacy, bioavailability, and safety. The presence of different polymorphs in drug production is a serious problem, since different polymorphs differ in bioavailability, solubility, dissolution rate, chemical and physical stability, melting point, color, filterability, density, and flow properties.

**Contents**

- Models of Size and Shape Control in Synthesis of Uniform Colloids and Nanocrystals
- Preparation of Uniform Drug Particles
- Biomedical Applications of Metal Oxides
- Biomedical Applications of Gold Nanoparticles
- Biomedical Applications of Magnetic Particles
- Degradeable Polymer Particles for Biomedical Applications
- Functionalization of Inorganic Nanoparticles for Targeted Delivery
- Particle Deposition in the Human Respiratory Tract
- Detection of Oxidative Stress Biomarkers Using Functional Gold
- Stimuli-responsive Thin Films and Capsules: Approaching Smart Drug Delivery Systems

**Vanadium**

Biochemical and Molecular Biological Approaches

Since the early 1980s, the biochemical behavior of vanadium has been investigated extensively such as its potent inhibitory role for Na+/K+-ATPase and its participation in insulin-mimicking but also because of the more recent findings on the enzymes and compounds containing vanadium. In addition, knowledge of the medicinal applications of vanadium such as the biochemical roles of its compounds in bone development, cellular mechanisms, signaling pathways and anti-cancer agents has increased enormously. Vanadium: Featuring Biochemical and Molecular Biological Approaches adds to this knowledge by presenting inorganic and redox processes and demonstrating the important use of vanadium in biological systems. Chapters include the following themes: hyper-accumulators of vanadium, enzymatic roles of vanadium, biochemical functions of vanadium and medicinal functions of vanadium. This volume is aimed at pure and applied chemists, biochemists, pharmaceutical and medical scientists.

**Features**

- The publication of Vanadium: Biochemical and Molecular Biological Approaches is particularly timely as its publication exactly coincides with the centennial anniversary of the discovery of vanadium by Professor Henze, in the blood cells of an ascidian (tunicate) collected in Gulf of Naples in 1911. Vanadium, atomic number 23, covers a wide range of oxidation states (from -2 to +5) and has unpaired electrons.

**Contents**

- Preface
- Inorganic Chemistry of Vanadium
- Amavadin, a Vanadium Compound in Amanita Fungi
- High Levels of Vanadium in Ascidians
- Hyper-accumulation of Vanadium in Polychaetes
- Structure and Function of Vanadium Haloperoxidases
- Bioinspired Catalytic Bromination Systems for Bromoperoxidase
- Vanadium Effects on Bone Metabolism
- Vanadium in Cancer Prevention
- Cardiovascular Protection with Vanadium Compounds

**Fields of interest**

Carbon Bonding and Structures
Advances in Physics and Chemistry

‘Carbon Bonding and Structures: Advances in Physics and Chemistry’ features detailed reviews which describe the latest advances in the modeling and characterization of fundamental carbon based materials and recently designed carbon composites. Significant advances are reported and reviewed by globally recognized experts in the field. The quantification, indexing, and interpretation of physical and chemical patterns of carbon atoms in molecules, crystals, and nanosystems is presented. ‘Carbon Bonding and Structures: Advances in Physics and Chemistry’ will be primarily of interest to theoretical physical chemists and computational materials scientists based in academia, government laboratories, and industry.

Features
Carbon Bonding and Structures: Advances in Physics and Chemistry handles the quantification, indexing, and interpretation of the physical and chemical behaviour of carbon in molecules, crystals, and nanosystems. This multi-author volume features cutting edge research and focuses on both inorganic and organic areas of carbon combinations and states modelled from quantum, physical, computational, and experimental methods.

Microwave-Induced Synthesis of Aromatic Heterocycles

For more than a century, heterocycles have played a crucial role in the biological and industrial development of society, becoming one of the most researched areas within organic chemistry. The first chapter of Microwave-Induced Synthesis of Aromatic Heterocycles is based on microwave theory, the latest developments in instrumentation technology, and the various microwave technologies used for synthesis. The remainder of the chapters are divided into two sections. Section A deals with the five-membered heterocycles (pyrazoles, isoxazoles, triazoles, oxadiazoles, thiazoles, imidazoles, pyrazoles, oxazoles, etc.) and in Section B, various six-membered heterocycles (triazines, benzoxazoles, benzimidazoles, benzothiazoles) are presented. Both sections contain a detailed, recent literature review of microwave assisted synthesis and its applicability to various aromatic heterocycles.

Features
For more than a century, heterocycles have played a crucial role in the biological and industrial development of society, becoming one of the most researched areas within organic chemistry. The first chapter of Microwave-Induced Synthesis of Aromatic Heterocycles is based on microwave theory, the latest developments in instrumentation technology, and the various microwave technologies used for synthesis.

Copper Zinc Tin Sulfide Thin Films for Photovoltaics

Synthesis and Characterisation by Electrochemical Methods

Jonathan Scragg documents his work on a very promising material suitable for use in solar cells. Copper Zinc Tin Sulfide (CZTS) is a low cost, earth-abundant material suitable for large scale deployment in photovoltaics. Jonathan pioneered and optimized a low cost route to this material involving electroplating of the three metals concerned, followed by rapid thermal processing (RTP) in sulfur vapour. His beautifully detailed RTP studies – combined with techniques such as XRD, EDX and Raman – reveal the complex relationships between composition, processing and photovoltaic performance. This exceptional thesis contributes to the development of clean, sustainable and alternative sources of energy.

Piezoceramic Sensors

This book presents the latest and complete information about various types of piezosensors. A sensor is a converter of the measured physical size to an electric signal. Piezoelectric transducers and sensors are based on piezoelectric effects. They have proven to be versatile tools for the measurement of various processes. They are used for quality assurance, process control and for research and development in many different industries. In each area of application specific requirements to the parameters of transducers and sensors are developed. The book presents the fundamentals, technical design and details and practical applications. Methods to design piezosensors are described, allowing to create sensors with unique properties. New methods to measure physical sizes and new constructions of sensors including large area of piezosensors are described in this book. This book is written for specialists in transforming hydroacoustics, non-destructive control, measuring technique, sensors development for [..]

Recent Trends of Mobile Collaborative Augmented Reality Systems

The use of mobile collaborative AR has expanded rapidly in recent years, due to the major advances in hardware and networking. The application areas are diverse and multidisciplinary. Recent Trends of Mobile Collaborative Augmented Reality Systems provides a historical overview of previous mobile collaborative AR systems, presents case studies of latest developments in current mobile collaborative AR systems, and latest technologies and system architectures used in this field. Recent Trends of Mobile Collaborative Augmented Reality Systems is designed for a professional audience composed of practitioners and researchers working in the field of augmented reality and human-computer interaction. Advanced-level students in computer science and electrical engineering focused on this topic will also find this book useful as a secondary text or reference.

Features

Advances in Information Retrieval Theory
Third International Conference, ICTIR 2011, Bertinoro, Italy, September 12-14, 2011, Proceedings

This book constitutes the refereed proceedings of the Third International Conference on the Theory of Information Retrieval, ICTIR 2011, held in Bertinoro, Italy, in September 2011. The 25 revised full papers and 13 short papers presented together with the abstracts of two invited talks were carefully reviewed and selected from 65 submissions. The papers cover topics ranging from query expansion, co-occurrence analysis, user and interactive modelling, system performance prediction and comparison, and probabilistic approaches for ranking and modelling IR to topics related to interdisciplinary approaches or applications. They are organized into the following topical sections: predicting query performance; latent semantic analysis and word co-occurrence analysis; query expansion and re-ranking; comparison of information retrieval systems and approximate search; probability ranking principle and alternatives; interdisciplinary approaches; user and relevance; result diversification and query [...]

The Virtual Future

The newest communication technologies are profoundly changing the world’s politics, economies, and cultures, but the specific implications of online gameworlds remain mysterious. The Virtual Future employs theories and methods from social science to explore nine very different virtual futures: The Matrix Online, Tabula Rasa, Anarchy Online, Entropia Universe, Star Trek Online, EVE Online, Star Wars Galaxies, World of Warcraft: Burning Crusade, and The Chronicles of Riddick. Each presents a different picture of how technology and society could evolve in coming centuries, but one theme runs through all of them, the attempt to escape the Earth and seek new destinies among the stars. Four decades after the last trip to the moon, a new conception of spaceflight is emerging. Rather than rockets shooting humans across vast physical distances to sterile rocks that lack the resources to sustain life, perhaps robot space probes and orbiting telescopes will glean information about the universe, that...[]

Advances in Visual Computing

The two volume set LNCS 6938 and LNCS 6939 constitutes the refereed proceedings of the 7th International Symposium on Visual Computing, ISVC 2011, held in Las Vegas, NV, USA, in September 2011. The 68 revised full papers and 46 poster papers presented together with 30 papers in the special tracks were carefully reviewed and selected from more than 240 submissions. The papers of part I (LNCS 6938) are organized in computational bioimaging, computer graphics, motion and tracking, segmentation, visualization; mapping modeling and surface reconstruction, biomedical imaging, computer graphics, interactive visualization in novel and heterogeneous display environments, object detection and recognition. Part II (LNCS 6939) comprises topics such as immersive visualization, applications, object detection and recognition, virtual reality, and best practices in teaching visual computing.

Modeling and Using Context
7th International and Interdisciplinary Conference, CONTEXT 2011, Karlsruhe, Germany, September 26-30, 2011, Proceedings

This book constitutes the proceedings of the 7th International and Interdisciplinary Conference on Modeling and Using Context, CONTEXT 2011, held in Karlsruhe, Germany in September 2011. The 17 full papers and 7 short papers presented were carefully reviewed and selected from 54 submissions. In addition the book contains two keynote speeches and 8 poster papers. They cover cutting-edge results from the wide range of disciplines concerned with context, including the cognitive sciences (linguistics, psychology, philosophy, computer science, neuroscience), the social sciences and organization sciences, and all application areas.

Einführung in die Quanteninformatik
Quantenkryptografie, Teleportation und Quantencomputing

Features
Ausgehend von der Theorie und den Protokollen der Quantenkryptografie werden anhand der derzeitigen technischen Möglichkeiten die erreichbaren Servicequalitäten vorgestellt. In einer ausgiebigen Diskussion wird die erreichbare Sicherheit herausgearbeitet, wobei bislang wenig beachtete Gesichtspunkte der Kryptoanalyse einfließen. Im gleichen Stil werden die Möglichkeiten des Quantencomputing untersucht, [...]

Automated Technology for Verification and Analysis

9th International Symposium, ATVA 2011, Taipei, Taiwan, October 11-14, 2011, Proceedings

This book constitutes the refereed proceedings of the 9th International Symposium on Automated Technology for Verification and Analysis, ATVA 2011, held in Taipei, Taiwan, in October 2011. The 23 revised regular papers presented together with 5 invited papers, 11 short papers, and 2 tool papers, were carefully reviewed and selected from numerous submissions. The papers address all theoretical and practical aspects of automated analysis, verification and synthesis; they provide a forum for interaction between the regional and the international research communities and industry in the field.

Hard Real-Time Computing Systems

Predictable Scheduling Algorithms and Applications

This updated edition offers an indispensable exposition on real-time computing, with particular emphasis on predictable scheduling algorithms. It introduces the fundamental concepts of real-time computing, demonstrates the most significant results in the field, and provides the essential methodologies for designing predictable computing systems used to support time-critical control applications. Along with an in-depth guide to the available approaches for the implementation and analysis of real-time applications, this revised edition contains a close examination of recent developments in real-time systems, including limited preemptive scheduling, resource reservation techniques, overload handling algorithms, and adaptive scheduling techniques. This volume serves as a fundamental advanced-level textbook. Each chapter provides basic concepts, which are followed by algorithms, illustrated with concrete examples, figures and tables. Exercises and solutions are provided to enhance self-study, making this [...] Effective for designing predictable computing systems used to support time-critical control applications. Along with an [...]

Adaptation and Value Creating Collaborative Networks

12th IFIP WG 5.5 Working Conference on Virtual Enterprises, PRO-VE 2011, Sao Paulo, Brazil, October 17-19, 2011, Proceedings

This book constitutes the refereed proceedings of the 12th IFIP WG 5.5 Working Conference on Virtual Enterprises, PRO-VE 2011, held in Sao Paulo, Brazil, in October 2011. The 61 revised papers presented were carefully selected from numerous submissions. They provide a comprehensive overview of recent advances in various collaborative network (CN) domains and their applications with a particular focus on adaptation of the networks and their value creation, specifically emphasizing topics related to evolution from social networking to collaborative networks; social capital; value chains; co-creation of complex products; performance management; behavioral aspects in collaborative networks; collaborative networks planning and modeling; benefit analysis and sustainability issues, as well as including important technical and scientific challenges in applying CNs to areas such as advanced logistics networks, business process modeling, service orientation, and other emerging application domains such as [..]

Guide to ILDJIT

This book is a guide to getting started with ILDJIT, a compilation framework designed to be both easily extensible and easily configurable. Within this framework, it is possible to build a tool-chain by customizing ILDJIT for specific purposes. Customizations can be used within both static and dynamic compilers already included in the framework without adaptations. Moreover, customizations allow modification of both the behaviors and the characteristics of these compilers to better satisfy the particular need. Currently, ILDJIT is able to translate bytecode programs to generate machine code for both Intel x86 and ARM processors. By relying on ILDJIT technology, more input languages or platforms can be supported. After an introduction to ILDJIT, this guide goes into detail on how to exploit it by extending the framework to match specific requirements. Finally, there is an introduction and discussion of the design choices followed during the authors’ years of development efforts towards ILDJIT.

DNA Computing and Molecular Programming

17th International Conference, DNA 17, Pasadena, CA, USA, September 19–23, 2011, Proceedings

This book constitutes the refereed proceedings of the 17th International Conference on DNA Computing and Molecular Programming, DNA17, held in Pasadena, CA, USA, in September 2011. The 12 revised full papers presented together with 5 invited talks were carefully selected from numerous submissions. Research in DNA computing and molecular programming draws together mathematics, computer science, physics, chemistry, biology, and nanotechnology to address the analysis, design, and synthesis of information-based molecular systems. This annual meeting is the premier forum where scientists with diverse backgrounds come together with the common purpose of advancing the engineering and science of biology and chemistry from the point of view of computer science, physics, and mathematics.

Grammars for Language and Genes
Theoretical and Empirical Investigations

Grammars are gaining importance in natural language processing and computational biology as a means of encoding theories and structuring algorithms. But one serious obstacle to applications of grammars is that formal language theory traditionally classifies grammars according to their weak generative capacity (what sets of strings they generate) and tends to ignore strong generative capacity (what sets of structural descriptions they generate) even though the latter is more relevant to applications. This book develops and demonstrates a framework for carrying out rigorous comparisons of grammar formalisms in terms of their usefulness for applications, focusing on three areas of application: statistical parsing, natural language translation, and biological sequence analysis. These results should pave the way for theoretical research to pursue results that are more directed towards applications, and for practical research to explore the use of advanced grammar formalisms more easily.

Web Information Systems Engineering - WISE 2010 Workshops
WISE 2010 International Symposium WISS, and International Workshops CISe, MBC, Hong Kong, China, December 12-14, 2010. Revised Selected Papers

This book contains the carefully selected and reviewed papers presented at three satellite events that were held in conjunction with the 11th International Conference on Web Information Systems Engineering, WISE 2010, in Hong Kong, China, in December 2010. The collection comprises a total of 40 contributions that originate from the First International Symposium on Web Intelligent Systems and Services (WISS 2010), from the First International Workshop on Cloud Information Systems Engineering (CISe 2010) and from the Second International Workshop on Mobile Business Collaboration (MBC 2010). The papers address a wide range of hot topics and are organized in topical sections on: decision and e-markets; rules and XML; web service intelligence; semantics and services; analyzing web resources; engineering web systems; intelligent web applications; web communities and personalization; cloud information system engineering; mobile business collaboration.

The papers are organized in two volumes on Innovative Computing and Information (CCIS 231 and 232), two volumes on Computing and Intelligent Systems (CCIS 233 and 234), and in two volumes on Information and Management Engineering (CCIS 235 and 236).

Features
This six-volume-set (CCIS 231, 232, 233, 234, 235, 236) constitutes the refereed proceedings of the International Conference on Computing, Information and Control, ICCIC 2011, held in Wuhan, China, in September 2011. The papers are organized in two volumes on Innovative Computing and Information (CCIS 231 and 232), two volumes on Computing and Intelligent Systems (CCIS 233 and 234), and in two volumes on Information and Management Engineering (CCIS 235 and 236).

Towards Ubiquitous Learning

This book constitutes the refereed proceedings of the 6th European Conference on Technology Enhanced Learning, EC-TEL 2011, held in Palermo, Italy, in September 2010. The 30 revised full papers presented were carefully reviewed and selected from 158 submissions. The book also includes 12 short papers, 8 poster papers, and 2 invited paper. There are many interesting papers on topics such as web 2.0 and social media, recommender systems, learning analytics, collaborative learning, interoperability of tools, etc.

Fields of interest
Information Systems Applications (incl.Internet); Artificial Intelligence (incl. Robotics); Information Storage and Retrieval; Computer Communication Networks; User Interfaces and Human Computer Interaction; Data Mining and Knowledge Discovery

Reachability Problems

This book constitutes the refereed proceedings of the 5th International Workshop on Reachability Problems, RP 2011, held in Genoa, Italy, in September 2011. The 16 papers presented together with 4 invited talks were carefully reviewed and selected from 24 submissions. The workshop deals with reachability problems that appear in algebraic structures, computational models, hybrid systems, logic, and verification. Reachability is a fundamental problem that appears in several different contexts: finite- and infinite-state concurrent systems, computational models like cellular automata and Petri nets, decision procedures for classical, modal and temporal logic, program analysis, discrete and continuous systems, time critical systems, and open systems modelled as games.

Algorithms -- ESA 2011

19th Annual European Symposium, Saarbrücken, Germany, September 5-9, 2011, Proceedings

This book constitutes the refereed proceedings of the 19th Annual European Symposium on Algorithms, ESA 2011, held in Saarbrücken, Germany, in September 2011 in the context of the combined conference ALGO 2011. The 67 revised full papers presented were carefully reviewed and selected from 255 initial submissions: 55 out of 209 in track design and analysis and 12 out of 46 in track engineering and applications. The papers are organized in topical sections on approximation algorithms, computational geometry, game theory, graph algorithms, stable matchings and auctions, optimization, online algorithms, exponential-time algorithms, parameterized algorithms, scheduling, data structures, graphs and games, distributed computing and networking, strings and sorting, as well as local search and set systems.

Self-organising Software

From Natural to Artificial Adaptation

Self-organisation, self-regulation, self-repair and self-maintenance are promising conceptual approaches for dealing with complex distributed interactive software and information-handling systems. Self-organising applications dynamically change their functionality and structure without direct user intervention, responding to changes in requirements and the environment. This is the first book to offer an integrated view of self-organisation technologies applied to distributed systems, particularly focusing on multiagent systems. The editors developed this integrated book with three aims: to explain self-organisation concepts and principles, using clear definitions and a strong theoretical background; to examine how self-organising behaviour can be modelled, analysed and systematically engineered into agent behaviour; and to assess the types of problems that can be solved using self-organising multiagent systems. The book comprises chapters covering all three dimensions, synthesising up-to-date features.

Haptics Technologies

Bringing Touch to Multimedia

The term “haptics” refers to the science of sensing and manipulation through touch. Multiple disciplines such as biomechanics, psychophysics, robotics, neuroscience, and software engineering converge to support haptics, and generally, haptic research is done by three communities: the robotics community, the human computer interface community, and the virtual reality community. This book is different from any other book that has looked at haptics. The authors treat haptics as a new medium rather than just a domain within one of the above areas. They describe human haptic perception and interfaces and present fundamentals in haptic rendering and modeling in virtual environments. Diverse software architectures for standalone and networked haptic systems are explained, and the authors demonstrate the vast application spectrum of this emerging technology along with its accompanying trends. The primary objective is to provide a comprehensive overview and a practical understanding of haptic technologies.

Traffic-Sign Recognition Systems

This work presents a full generic approach to the detection and recognition of traffic signs. The approach is based on the latest computer vision methods for object detection, and on powerful methods for multiclass classification. The challenge was to robustly detect a set of different sign classes in real time, and to classify each detected sign into a large, extensible set of classes. To address this challenge, several state-of-the-art methods were developed that can be used for different recognition problems. Following an introduction to the problems of traffic sign detection and categorization, the text focuses on the problem of detection, and presents recent developments in this field. The text then surveys a specific methodology for the problem of traffic sign categorization – Error-Correcting Output Codes – and presents several algorithms, performing experimental validation on a mobile mapping application. The work ends with a discussion on future research and continuing challenges.

Features
This work presents a full generic approach to the detection and recognition of traffic signs. The approach, originally developed for a mobile mapping application, is based on the latest computer vision methods for object detection, and on powerful methods for multiclass classification. The challenge was to robustly detect a set of different sign classes in real time, and to classify each detected sign into a set.

Information Hiding
13th International Conference, IH 2011, Prague, Czech Republic, May 18-20, 2011, Revised Selected Papers

This book contains the thoroughly refereed post-conference proceedings of the 13th Information Hiding Conference, IH 2011, held in Prague, Czech Republic, in May 2011. Included in this volume are 23 carefully reviewed papers that were selected out of 69 submissions. The contributions are organized in topical sections on fingerprinting, anonymity and privacy, steganography and steganalysis, watermarking, digital rights management and digital forensics, and digital hiding in unusual context. Also included are the papers that were presented as part of the special session dedicated to the BOSS (Break Our Steganographic System) contest.

This book constitutes the refereed proceedings of the Second International Conference on Multilingual and Multimodal Information Access Evaluation, in continuation of the popular CLEF campaigns and workshops that have run for the last decade, CLEF 2011, held in Amsterdam, The Netherlands, in September 2011. The 14 revised full papers presented together with 2 keynote talks were carefully reviewed and selected from numerous submissions. The papers accepted for the conference included research on evaluation methods and settings, natural language processing within different domains and languages, multimedia and reflections on CLEF. Two keynote speakers highlighted important developments in the field of evaluation: the role of users in evaluation and a framework for the use of crowdsourcing experiments in the setting of retrieval evaluation.

**Handbook of Augmented Reality**

Augmented Reality (AR) refers to the merging of a live view of the physical, real world with context-sensitive, computer-generated images to create a mixed reality. Through this augmented vision, a user can digitally interact with and adjust information about their surrounding environment on-the-fly. Handbook of Augmented Reality provides an extensive overview of the current and future trends in Augmented Reality, and chronicles the dramatic growth in this field. The book includes contributions from world expert s in the field of AR from academia, research laboratories and private industry. Case studies and examples throughout the handbook help introduce the basic concepts of AR, as well as outline the Computer Vision and Multimedia techniques most commonly used today. The book is intended for a wide variety of readers including academicains, designers, developers, educators, engineers, practitioners, researchers, and graduate students. This book can also be beneficial for business managers,...

**Features**

Augmented Reality (AR) refers to the merging of a live view of the physical, real world with context-sensitive, computer-generated images to create a mixed reality. Through this augmented vision, a user can digitally interact with and adjust information about their surrounding environment on-the-fly. Handbook of Augmented Reality provides an extensive overview of the current and future trends in...
Computer Vision/Computer Graphics Collaboration Techniques

This book constitutes the refereed proceedings of the 5th International Conference on Computer Vision/Computer Graphics Collaboration Techniques, MIRAGE 2011, held in Rocquencourt, France, in October 2011. The 23 full papers presented were carefully reviewed and selected from numerous submissions. The papers cover a wide range of topics with focus on Computer Vision/Computer Graphics Collaboration Techniques involving image analysis/synthesis approaches especially concerning theoretical, computational, experimental or industrial aspects of model-based image analysis and image-based model synthesis.

Metadata and Semantic Research
5th International Conference, MTSR 2011, Izmir, Turkey, October 12-14, 2011. Proceedings

This volume constitutes the selected papers of the 5th International Conference on Metadata and Semantic Research, MTSR 2011, held in Izmir, Turkey, in October 2011. The 36 full papers presented together with 16 short papers and project reports were carefully reviewed and selected from 118 submissions. The papers are organized in topical sections on Tracks on Metadata and Semantics for Open Access Repositories and Infrastructures, Metadata and Semantics for Learning Infrastructures, Metadata and Semantics for Cultural Collections and Applications, Metadata and Semantics for Agriculture, Food and Environment.

Comparative Evaluation of Focused Retrieval

This book constitutes the thoroughly refereed post-workshop proceedings of the 9th International Workshop of the Initiative for the Evaluation of XML Retrieval, INEX 2010, held in Vught, The Netherlands, in December 2009. The aim of the INEX 2010 workshop was to bring together researchers in the field of XML IR who participated in the INEX 2010 campaign. During the past year, participating organizations contributed to the building of large-scale XML test collections by creating topics, performing retrieval runs and providing relevance assessments. The workshop concluded the results of this large-scale effort, summarized and addressed issues encountered, and devised a work plan for the future evaluation of XML retrieval systems. The 37 full papers presented were carefully reviewed and selected from 42 submissions; they are organized into sections corresponding to the nine tracks of the workshop, investigating various aspects of XML retrieval, from book search to entity.

Personal Satellite Services
Third International ICST Conference, PSATS 2011, Malaga, Spain, February 17-18, 2011, Revised Selected Papers

This book constitutes the thoroughly refereed post-conference proceedings of the Third International ICST Conference on Personal Satellite Services, PSATS 2011, held in Malaga, Spain, in February 2011. The 33 revised full papers presented were carefully reviewed and selected to cover a wide range of topics such as multimedia IP, next generation satellite networks, bandwidth allocation, aeronautic communications for air traffic management, DVB-S2, hybrid networks, delay tolerant networking, channel estimation and interference management, satellite antenna design, and localization systems.

Research and Advanced Technology for Digital Libraries

This book constitutes the refereed proceedings of the International Conference on Theory and Practice of Digital Libraries, TPDL 2011 - formerly known as ECDL (European Conference on Research and Advanced Technology for Digital Libraries) - held in Berlin, Germany, in September 2011. The 27 full papers, 13 short papers, 9 posters and 9 demos presented in this volume were carefully reviewed and selected from 162 initial submissions. In addition the book contains the abstract of 2 keynote speeches and an appendix stating information on the doctoral consortium, as well as the panel, which were held at the conference. The papers are grouped in topical sections on networked information, semantics and interoperability, systems and architectures, text and multimedia retrieval, collaborative information spaces, DL applications and legal aspects, user interaction and information visualization, user studies, archives and repositories, europeana, and preservation.

Machine Learning and Knowledge Discovery in Databases

This three-volume set LNLI 6911, LNAI 6912, and LNAI 6913 constitutes the refereed proceedings of the European conference on Machine Learning and Knowledge Discovery in Databases: ECML PKDD 2011, held in Athens, Greece, in September 2011. The 121 revised full papers presented together with 10 invited talks and 11 demos in the three volumes, were carefully reviewed and selected from about 600 paper submissions. The papers address all areas related to machine learning and knowledge discovery in databases as well as other innovative application domains such as supervised and unsupervised learning with some innovative contributions in fundamental issues; dimensionality reduction, distance and similarity learning, model learning and matrix/tensor analysis, graph mining, graphical models, hidden markov models, kernel methods, active and ensemble learning, semi-supervised and transductive learning, mining sparse representations, model learning, inductive logic programming, and statistical learning. Open Source Systems: Grounding Research

7th IFIP 2.13 International Conference, OSS 2011, Salvador, Brazil, October 6-7, 2011, Proceedings

This book constitutes the refereed proceedings of the 7th International IFIP WG 2.13 Conference on Open Source Systems, OSS 2010, held in Salvador, Brazil, in October 2011. The 20 revised full papers presented together with 4 industrial full papers and 8 lightning talks were carefully reviewed and selected from 56 submissions. The papers are organized in the following topical sections: OSS quality and reliability, OSS products, review of technologies of and for OSS, knowledge and research building in OSS, OSS reuse, integration, and compliance, OSS value and economics, OSS adoption in industry, and mining OSS repositories.

Perspectives on Soviet and Russian Computing

First IFIP WG 9.7 Conference, SoRuCom 2006, Petrozavodsk, Russia, July 3-7, 2006, Revised Selected Papers

This book contains a collection of thoroughly refereed papers derived from the First IFIP WG 9.7 Conference on Soviet and Russian Computing, held in Petrozavodsk, Russia, in July 2006. The 32 revised papers were carefully selected from numerous submissions; many of them were translated from Russian. They reflect much of the shining history of computing activities within the former Soviet Union from its origins in the 1950s with the first computers used for military decision-making problems up to the modern period where Russian ICT grew substantially, especially in the field of custom-made programming.

History of Nordic Computing 3
Third IFIP WG 9.7 Conference, HiNC3, Stockholm, Sweden, October 18-20, 2010, Revised Selected Papers

This book constitutes the refereed post-proceedings of the Third IFIP WG 9.7 Conference on the History of Nordic Computing, HiNC3, held in Stockholm, Sweden, in October 2010. The 50 revised full papers presented together with a keynote address and a panel discussion were carefully reviewed and selected from numerous submissions. The papers focus on the application and use of ICT and ways in which technical progress affected the conditions of the development and use of ICT systems in the Nordic countries covering a period from around 1970 until the beginning of the 1990s. They are organized in the following topical sections: computerizing public sector industries; computerizing management and financial industries; computerizing art, media, and schools; users and systems development; the making of a Nordic computing industry; Nordic networking; Nordic software development; Nordic research in software and systems development; teaching at Nordic universities; and new historiographical approaches and[...]

Patterns in Permutations and Words

There has been considerable interest recently in the subject of patterns in permutations and words, a new branch of combinatorics with its roots in the works of Rotem, Rogers, and Knuth in the 1970s. Consideration of the patterns in question has been extremely interesting from the combinatorial point of view, and it has proved to be a useful language in a variety of seemingly unrelated problems, including the theory of Kazhdan—Lusztig polynomials, singularities of Schubert varieties, interval orders, Chebyshev polynomials, models in statistical mechanics, and various sorting algorithms, including sorting stacks and sortable permutations. The author highlights significant achievements in the area, and points to research directions and open problems. The book will be of interest to researchers and graduate students in theoretical computer science and mathematics, in particular those working in algebraic-related problems.

Features

Computer Vision -- ACCV 2010 Workshops

ACCV 2010 International Workshops, Queenstown, New Zealand, November 8-9, 2010. Revised Selected Papers, Part I

The two-volume set LNCS 6468-6469 contains the carefully selected and reviewed papers presented at the eight workshops that were held in conjunction with the 10th Asian Conference on Computer Vision, in Queenstown, New Zealand, in November 2010. From a total of 167 submissions to all workshops, 89 papers were selected for publication. The contributions are grouped together according to the main workshops topics, which were: computational photography and aesthetics; computer vision in vehicle technology; from Earth to Mars; electronic cultural heritage; subspace-based methods; video event categorization, tagging and retrieval; visual surveillance; application of computer vision for mixed and augmented reality.

The two-volume set LNCS 6468-6469 contains the carefully selected and reviewed papers presented at the eight workshops that were held in conjunction with the 10th Asian Conference on Computer Vision, in Queenstown, New Zealand, in November 2010. From a total of 167 submissions to all workshops, 89 papers were selected for publication. The contributions are grouped together according to the main workshops topics, which were: computational photography and aesthetics; computer vision in vehicle technology; from Earth to Mars; electronic cultural heritage; subspace based methods; video event categorization, tagging and retrieval; visual surveillance; application of computer vision for mixed and augmented reality.

**Features**

**Knowledge-Based and Intelligent Information and Engineering Systems, Part I**

15th International Conference, KES 2011, Kaiserslautern, Germany, September 12-14, 2011, Proceedings, Part I

The four-volume set LNAI 6881-LNAI 6884 constitutes the refereed proceedings of the 15th International Conference on Knowledge-Based Intelligent Information and Engineering Systems, KES 2011, held in Kaiserslautern, Germany, in September 2011. Part 1: The total of 244 high-quality papers presented were carefully reviewed and selected from numerous submissions. The 61 papers of Part 1 are organized in topical sections on artificial neural networks, connectionist systems and evolutionary computation, machine learning and classical AI, agent, multi-agent systems, knowledge based and expert systems, intelligent vision, image processing and signal processing, knowledge management, ontologies, and data mining.

**Features**

Forensics in Telecommunications, Information and Multimedia

Third International ICST Conference, e-Forensics 2010, Shanghai, China, November 11-12, 2010, Revised Selected Papers

This book constitutes the thoroughly refereed post-conference proceedings of the Third International ICST Conference on Forensic Applications and Techniques in Telecommunications, Information and Multimedia, E-Forensics 2010, held in Shanghai, China, in November 2010. The 32 revised full papers presented were carefully reviewed and selected from 42 submissions in total. These, along with 5 papers from a collocated workshop of E-Forensics Law, cover a wide range of topics including digital evidence handling, data carving, records tracing, device forensics, data tamper identification, and mobile device locating.

Multimodal Brain Image Analysis

This book constitutes the refereed proceedings of the First International Workshop on Multimodal Brain Image Analysis, held in conjunction with MICCAI 2011, in Toronto, Canada, in September 2011. The 15 revised full papers presented together with 4 poster papers were carefully reviewed and selected from 24 submissions. The objective of this workshop is to facilitate advancements in the multimodal brain image analysis field, in terms of analysis methodologies, algorithms, software systems, validation approaches, benchmark datasets, neuroscience, and clinical applications.

UNIX Operating System

The Development Tutorial via UNIX Kernel Services

"UNIX Operating System: The Development Tutorial via UNIX Kernel Services" introduces the hierarchical structure, principles, applications, kernel, shells, development, and management of the UNIX operation systems multi-dimensionally and systematically. It clarifies the natural bond between physical UNIX implementation and general operating system and software engineering theories, and presents self-explanatory illustrations for readers to visualize and understand the obscure relationships and intangible processes in UNIX operating system. This book is intended for engineers and researchers in the field of applicable computing and engineering modeling. Yukun Liu is an Associate Professor at the Department of Computer Science and Technology, Hebei University of Science and Technology, China; Professor Yong Yue is Director of the Institute for Research of Applicable Computing and Head of the Department of Computer Science and Technology, University of Bedfordshire, UK; Professor Liwei Guo is Dean of[...]

Glazed Panel Construction with Human-Robot Cooperation

These days, construction companies are beginning to be concerned about a potential labor shortage by demographic changes and an aging construction work force. Also, an improvement in construction safety could not only reduce accidents but also decrease the cost of the construction, and is therefore one of the imperative goals of the construction industry. These challenges correspond to the potential for Automation and Robotics in Construction as one of solutions. Almost half of construction work is said to be material handling and materials used for construction are heavy and bulky for humans. To date, various types of robots have been developed for glared panel construction. Through the case studies on construction, to which the robots were applied, however, we identified difficulties to be overcome. In this study, a human-robot cooperative system is deduced as one approach to surmount these difficulties; then, considerations on interactions among the operator, robot and environment are applied to[...]

Image Analysis and Processing -- ICIAP 2011

16th International Conference, Ravenna, Italy, September 14-16, 2011, Proceedings, Part I

The two-volume set LNCS 6978 + LNCS 6979 constitutes the proceedings of the 16th International Conference on Image Analysis and Processing, ICIAP 2011, held in Ravenna, Italy, in September 2011. The total of 121 papers presented was carefully reviewed and selected from 175 submissions. The papers are divided into 10 oral sessions, comprising 44 papers, and three post sessions, comprising 77 papers. They deal with the following topics: image analysis and representation; image segmentation; pattern analysis and classification; forensics, security and document analysis; video analysis and processing; biometry; shape analysis; low-level color image processing and its applications; medical imaging; image analysis and pattern recognition; image and video analysis and processing and its applications.

Multiobjective Genetic Algorithms for Clustering

Applications in Data Mining and Bioinformatics
This is the first book primarily dedicated to clustering using multiobjective genetic algorithms with extensive real-life applications in data mining and bioinformatics. The authors first offer detailed introductions to the relevant techniques -- genetic algorithms, multiobjective optimization, soft computing, data mining and bioinformatics. They then demonstrate systematic applications of these techniques to real-world problems in the areas of data mining, bioinformatics and geoscience. The authors offer detailed theoretical and statistical notes, guides to future research, and chapter summaries. The book can be used as a textbook and as a reference book by graduate students and academic and industrial researchers in the areas of soft computing, data mining, bioinformatics and geoscience.

A Feature-Centric View of Information Retrieval

Commercial Web search engines such as Google, Yahoo, and Bing are used every day by millions of people across the globe. With their ever-growing refinement and usage, it has become increasingly difficult for academic researchers to keep up with the collection sizes and other critical research issues related to Web search, which has created a divide between the information retrieval research being done within academia and industry. Such large collections pose a new set of challenges for information retrieval researchers. In this work, Metzler describes highly effective information retrieval models for both smaller, classical data sets, and larger Web collections. In a shift away from heuristic, hand-tuned ranking functions and complex probabilistic models, he presents feature-based retrieval models. The Markov random field model he details goes beyond the traditional yet ill-suited bag of words assumption in two ways. First, the model can easily exploit various types of dependencies that exist [...] Features

Cartesian Genetic Programming

Cartesian Genetic Programming (CGP) is a highly effective and increasingly popular form of genetic programming. It represents programs in the form of directed graphs, and a particular characteristic is that it has a highly redundant genotype–phenotype mapping, in that genes can be noncoding. It has spawned a number of new forms, each improving on the efficiency, among them modular, or embedded, CGP, and self-modifying CGP. It has been applied to many problems in both computer science and applied sciences. This book contains chapters written by the leading figures in the development and application of CGP, and it will be essential reading for researchers in genetic programming and for engineers and scientists solving applications using these techniques. It will also be useful for advanced undergraduates and postgraduates seeking to understand and utilize a highly efficient form of genetic programming.

Pervasive Advertising

This book looks at the future of advertising from the perspective of pervasive computing. Pervasive computing encompasses the integration of computers into everyday devices, like the covering of surfaces with interactive displays and networked mobile phones. Advertising is the communication of sponsored messages to inform, convince, and persuade to buy. We believe that our future cities will be digital, giving us instant access to any information we need everywhere, like at bus stops, on the sidewalk, inside the subway and in shopping malls. We will be able to play with and change the appearance of our cities effortlessly, like making flowers grow along a building wall or changing the colour of the street we are in. Like the internet as we know it, this digitalization will be paid for by adverts, which unobtrusively provide us suggestions for nearby restaurants or cafes. If any content annoys us, we will be able to effortlessly say so and change it with simple gestures, and content providers [...] Features

Following decades of exciting developments in laboratories around the world, pervasive computing technologies are starting to reshape our world in real ways. Computers, visible and invisible, are everywhere: traditional signs and billboards are being replaced by digital signage, projections, and interactive surfaces. Communication is digital and ubiquitous—the majority of the world's population uses mobile [...] Contents

Transactions on Computational Collective Intelligence V

These Transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the Semantic Web, social networks and multi-agent systems. TCCI strives to cover new methodological, theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This 5th issue contains a collection of 10 carefully selected and thoroughly revised contributions. The articles deal with the following topics: web page language identification; a novel image edge detection approach using ant colony optimization techniques; component-based software; [...] Features

Encyclopedia of Parallel Computing

Containing over 300 entries in an A-Z format, the Encyclopedia of Parallel Computing provides easy, intuitive access to relevant information for professionals and researchers seeking access to any aspect within the broad field of parallel computing. Topics for this comprehensive reference were selected, written, and peer-reviewed by an international pool of distinguished researchers in the field. The Encyclopedia is broad in scope, covering machine organization, programming languages, algorithms, and applications. Within each area, concepts, designs, and specific implementations are presented. The highly-structured essays in this work comprise synonyms, a definition and discussion of the topic, bibliographies, and links to related literature. Extensive cross-references to other entries within the Encyclopedia support efficient, user-friendly searches for immediate access to useful information. Key concepts presented in the Encyclopedia of Parallel Computing include; laws and metrics; specific [...] Features

**Trends in Functional Programming**

11th International Symposium, TFP 2010, Norman, OK, USA, May 17-19, 2010. Revised Selected Papers

This book constitutes the thoroughly refereed post-conference proceedings of the 11th International Symposium on Trends in Functional Programming, TFP 2010, held in Norman, OK, USA, in May 2010. The 13 revised full papers presented were carefully reviewed and selected from 26 submissions during two rounds of reviewing and improvement. The papers cover new ideas for refactoring, managing source-code complexity, functional language implementation, graphical languages, applications of functional programming in pure mathematics, type theory, multitasking and parallel processing, distributed systems, scientific modeling, domain specific languages, hardware design, education, and testing.

**Features**

**Transactions on Edutainment VI**

This journal subline serves as a forum for stimulating and disseminating innovative research ideas, theories, emerging technologies, empirical investigations, state-of-the-art methods, and tools in all different genres of edutainment, such as game-based learning and serious games, interactive storytelling, virtual learning environments, VR-based education, and related fields. It covers aspects from educational and game theories, human-computer interaction, computer graphics, artificial intelligence, and systems design. The 6th volume in this series represents a selection of 7 contributions from DMDCM 2011, the 5th International Conference on Digital Media and Digital Content Management, held in Chengdu, China, in May 2011. The topics covered are: pen-based interface, urban heat island simulation, BR-based on-line expo, physically-based, [...]

Ontology-based Application Integration

Ontology-based Application Integration introduces UI-level (User Interface Level) application integration and discusses current problems which can be remedied by using ontologies. It shows a novel approach for applying ontologies in system integration. While ontologies have been used for integration of IT systems on the database and on the business logic layer, integration on the user interface layer is a novel field of research. This book also discusses how end users, not only developers, can benefit from semantic technologies. Ontology-based Application Integration presents the development of a software framework including a detailed ontology about user interfaces and interactions. This includes a running case study of a real world integrated emergency management system. The last section of this book discusses useful features that can be built on top of the framework for improving the user experience with future integrated information systems. Ontology-based Application Integration is designed as [...] Features

Advances in Digital Forensics VII
7th IFIP WG 11.9 International Conference on Digital Forensics, Orlando, FL, USA, January 31 - February 2, 2011, Revised Selected Papers

Digital forensics deals with the acquisition, preservation, examination, analysis and presentation of electronic evidence. Networked computing, wireless communications and portable electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations. Practically every crime now involves some aspect of digital evidence; digital forensics provides the techniques and tools to articulate this evidence. Digital forensics also has myriad intelligence applications. Furthermore, it has a vital role in information assurance – investigations of security breaches yield valuable information that can be used to design more secure systems. Advances in Digital Forensics VII describes original research results and innovative applications in the discipline of digital forensics. In addition, it highlights some of the major technical and legal issues related to digital evidence and electronic crime investigations. The areas of coverage include: Themes and Issues, Forensic[...]

AI*IA 2011: Artificial Intelligence Around Man and Beyond
XIIth International Conference of the Italian Association for Artificial Intelligence, Palermo, Italy, September 15-17, 2011. Proceedings

This book constitutes the refereed proceedings of the 12th International Conference of the Italian Association for Artificial Intelligence, AI*IA 2011, held in Palermo, Italy, in September 2011. The 31 revised full papers presented together with 3 invited talks and 13 posters were carefully reviewed and selected from 58 submissions. The papers are organized in topical sections on machine learning; distributed AI; robotics and MAS; theoretical issues; knowledge representation and reasoning; planning, cognitive modeling; natural language processing; and AI applications.

Markov Models for Handwriting Recognition

Since their first inception, automatic reading systems have evolved substantially, yet the recognition of handwriting remains an open research problem due to its substantial variation in appearance. With the introduction of Markovian models to the field, a promising modeling and recognition paradigm was established for automatic handwriting recognition. However, no standard procedures for building Markov model-based recognizers have yet been established. This text provides a comprehensive overview of the application of Markov models in the field of handwriting recognition, covering both hidden Markov models and Markov-chain or n-gram models. First, the text introduces the typical architecture of a Markov model-based handwriting recognition system, and familiarizes the reader with the essential theoretical concepts behind Markovian models. Then, the text reviews proposed solutions in the literature for open problems in applying Markov model-based approaches to automatic handwriting recognition.

Features
Since their first inception more than half a century ago, automatic reading systems have evolved substantially, thereby showing impressive performance on machine-printed text. The recognition of handwriting can, however, still be considered an open research problem due to its substantial variation in appearance. With the introduction of Markovian models to the field, a promising modeling and recognition paradigm was established for automatic handwriting recognition. However, no standard procedures for building Markov model-based recognizers have yet been established. This text provides a comprehensive overview of the application of Markov models in the field of handwriting recognition, covering both hidden Markov models and Markov-chain or n-gram models. First, the text introduces the typical architecture of a Markov model-based handwriting recognition system, and familiarizes the reader with the essential theoretical concepts behind Markovian models. Information Security and Cryptology - ICISC 2010
13th International Conference, Seoul, Korea, December 1-3, 2010, Revised Selected Papers

This book constitutes the thoroughly refereed post-conference proceedings of the 13th International Conference on Information Security and Cryptology, held in Seoul, Korea, in December 2010. The 28 revised full papers presented were carefully selected from 99 submissions during two rounds of reviewing. The conference provides a forum for the presentation of new results in research, development, and applications in the field of information security and cryptology. The papers are organized in topical sections on cryptanalysis, cryptographic algorithms, implementation, network and mobile security, symmetric key cryptography, cryptographic protocols, and side channel attack.

Human-in-the-Loop Simulations

Methods and Practice

Human-in-the-Loop Simulations is a compilation of articles from experts in the design, development, and use of human-in-the-loop simulations. The first section of the handbook consists of papers on fundamental concepts in human-in-the-loop simulations, such as object-oriented simulation development, interface design and development, and performance measurement. The second section includes papers from researchers who utilized HITL simulations to inform models of cognitive processes to include decision making and metacognition. The last section describes human-in-the-loop processes for complex simulation models in trade space exploration and epidemiological analyses.

Human-in-the-Loop Simulations is a useful tool for multiple audiences, including graduate students and researchers in engineering and computer science.

Features

Human-in-the-Loop Simulations is a compilation of articles from experts in the design, development, and use of human-in-the-loop simulations.

Contents

1. Interactive Simulations: History, Features, and Trends.
3. Virtual and Constructive Simulations with the GRIBIL Modeling Tool.
5. Determining the Number of Simulation Runs: Treating Simulations as Theories by Not Sampling Their Behavior.
7. Trade Space Exploration: Assessing the Benefits of Putting Designers “Back-in-the-Loop” During...

Principles of Compilers

A New Approach to Compilers Including the Algebraic Method

"Principles of Compilers: A New Approach to Compilers Including the Algebraic Method" introduces the ideas of the compilation from the natural intelligence of human beings by comparing similarities and differences between the compilations of natural languages and programming languages. The notation is created to list the source language, target languages, and compiler language, vividly illustrating the multilevel procedure of the compilation in the process. The book thoroughly explains the LL(1) and LR(1) parsing methods to help readers to understand the how and why. It not only covers established methods used in the development of compilers, but also introduces an increasingly important alternative — the algebraic formal method. This book is intended for undergraduates, graduates and researchers in computer science. Professor Yunlin Su is Head of the Research Center of Information Technology, Universitas Ma Chung, Indonesia and Department of Computer Science, Jinan University, Guangzhou, China. Dr. [...] Features

Intelligent Virtual Agents
10th International Conference, IVA 2011, Reykjavik, Island, September 15-17, 2011. Proceedings

This book constitutes the refereed proceedings of the 10th International Conference on Intelligent Virtual Agents, IVA 2011, held in Reykjavik, Island, in September 2011. The 18 revised full papers and 27 revised short papers presented together with 25 poster papers were carefully reviewed and selected from 91 submissions. The papers are organized in topical sections on social and dramatic interaction; guides and relational agents; nonverbal behavior; adaptation and coordination; listening and feedback; frameworks and tools; cooperation and copresence; emotion; poster abstracts.

Collaboration and Technology
17th International Conference, CRIWG 2011, Paraty, Brazil, October 2-7, 2011, Proceedings

This book constitutes the proceedings of the 17th International Conference on Collaboration Researchers’ International Working Group Conference on Collaboration and Technology, held in Paraty, Brazil, in October 2011. The 12 revised papers presented together with 6 short papers were carefully reviewed and selected from numerous submissions. They are grouped into four themes that represent current areas of interest in groupware research: theoretical foundation, empirical studies, methods and techniques, and tools for communication and cooperation.

Software Architecture
A Comprehensive Framework and Guide for Practitioners

As a software architect you work in a wide-ranging and dynamic environment. You have to understand the needs of your customer, design architectures that satisfy both functional and non-functional requirements, and lead development teams in implementing the architecture. And it is an environment that is constantly changing: trends such as cloud computing, service orientation, and model-driven procedures open up new architectural possibilities. This book will help you to develop a holistic architectural awareness and knowledge base that extends beyond concrete methods, techniques, and technologies. It will also help you to acquire or expand the technical, methodological, and social competences that you need. The authors place the spotlight on you, the architect, and offer you long-term architectural orientation. They give you numerous guidelines, checklists, and best practices to support you in your practical work. ‘Software Architecture’ offers IT students, software developers, and software [...] -

Contents
Introduction.- Architecture Orientation Framework.- Architectures and Architecture Disciplines (WHAT).- Architecture Perspectives (WHERE).- Architecture Requirements (WHY).- Architecture Means (WITH WHAT).- Architecture Method (HOW).-

Context and Semantics for Knowledge Management

Technologies for Personal Productivity

Knowledge and information are among the biggest assets of enterprises and organizations. However, efficiently managing, maintaining, accessing, and reusing this intangible treasure is difficult. Information overload makes it difficult to focus on the information that really matters; the fact that much corporate knowledge only resides in employees’ heads seriously hampers reuse. The work described in this book is motivated by the need to increase the productivity of knowledge work. Based on results from the EU-funded ACTIVE project and complemented by recent related results from other researchers, the application of three approaches is presented: the synergy of Web 2.0 and semantic technology, context-based information delivery; and the use of technology to support informal user processes. The contributions are organized in five parts. Part I comprises a general introduction and a description of the opportunities and challenges faced by organizations in exploiting Web 2.0 capabilities. Part II looks [...] -

Social Media Tools and Platforms in Learning Environments

Online social media have transformed the face of human interaction in the 21st century. Wikis, blogs, online groups and forums, podcasts, virtual worlds, and social tagging are but a few of the applications enabling innovative behaviors that support acquisition, access, manipulation, retrieval, and visualization of information. It is, therefore, no surprise that educational practitioners and theorists have begun to explore how social media can be harnessed to describe and implement new paradigms for communication, learning, and education. The editors’ goal in publishing this book was to identify original research on the application of online social media and related technologies in education as well as emerging applications in Web technologies that could provide and shape future educational platforms. The selected contributions deal with questions such as how social media can truly enrich and enhance learning and teaching experiences in ways not otherwise possible; how learning can be integrated in [...] -

Model Driven Engineering Languages and Systems

14th International Conference, MODELS 2011, Wellington, New Zealand, October 16-21, 2011, Proceedings

This book constitutes the refereed proceedings of the 14th International Conference on Model Driven Engineering Languages and Systems, MODELS 2011, held in Wellington, New Zealand, in October 2011. The papers address a wide range of topics in research (foundations track) and practice (applications track). For the first time a new category of research papers, vision papers, are included presenting ‘outside the box’ thinking. The foundations track received 167 full paper submissions, of which 34 were selected for presentation. Out of these, 3 papers were vision papers. The application track received 27 submissions, of which 13 papers were selected for presentation. The papers are organized in topical sections on model transformation, model complexity, aspect oriented modeling, analysis and comprehension of models, domain specific modeling, models for embedded systems, model synchronization, model based resource management, analysis of class diagrams, verification and validation, refactoring models, […]

Emerging Research in Web Information Systems and Mining

This book constitutes, together with LNCS 6987 and LNCS 6988, the refereed proceedings of the International Conference on Web Information Systems and Mining, WISM 2011, held in Taiyuan, China, in September 2011. The 112 revised full papers presented in the three volumes were carefully reviewed and selected from 472 submissions. The 61 papers presented in this volume are organized in topical sections on applications of artificial intelligence; applications of computational intelligence; automated problem solving; brain models/cognitive science; data mining and knowledge discovering; expert and decision support systems; fuzzy logic and soft computing; intelligent agents and systems; intelligent control; intelligent image processing; intelligent scheduling; intelligent signal processing; natural language processing; nature computation; neural computation; pattern recognition; rough set theory.

The Yamuna River Basin

Water Resources and Environment

This book is designed to provide concepts, methodologies, and approaches for river basin studies with respect to water resources and environment. The book is not limited to the Yamuna River basin, but will help in the study of various other river basins for integrated water resources management. The book covers the essential components of integrated water resources management, including analysis of climatic variables, climate change detection, analysis of natural resources, geology, geomorphology, socio-economics, water budgeting, flood estimation, river pollution, etc. Furthermore, the book addresses recent issues pertaining to water quality, water quality indices, environmental flows, water resources management through cropping pattern change, etc. along with methodologies and application to the Yamuna River system. However, the main objective of this book is to address important issues of water resources management of river basins.

Audience: The manuscript has been designed so that it can be [..]

Satellite Geology and Photogeomorphology

An Instructional Manual for Data Integration

The twin sets of figures in the manual are presented as examples that demonstrate how the interfacing of stereo airphotos and satellite images in visual qualitative photogeomorphology studies can yield more geospatial information than can be derived from either source independently. The airphoto coverage in each satellite image is indicated by a frame. The photos and images are ordered into eleven sections according to the author's taxonomic classification of genetic groups as used in his Atlas and Glossary of Geohazard-associated Geounits. The figure sets of each section are preceded by characterisations of their genetic classification context. Some airphotos are taken from those used in the Atlas, the satellite images have been downloaded from USGS Global Visualization Viewer.

Features

The twin sets of figures in the manual are presented as examples that demonstrate how the interfacing of stereo airphotos and satellite images in visual qualitative photogeomorphology studies can yield more geospatial information than can be derived from either source independently. The airphoto coverage in each satellite image is indicated by a frame. The photos and images are ordered into eleven [..]

Contents

Part I Introduction.- Purpose.- The data.- Advantages and limitations of airphotos for photogeological analysis, interpretation, and terrain mapping.- Airphotos used in the book.- Advantages and limitations of satellite imagery for photogeological analysis, interpretation, and terrain mapping.- Acquisition of satellite images used in the book.- Resolution of Geounits in downloaded images.- Classification of Photogeological Geounits.- Definition of photogeological Geounits and Variants as delineation Units for terrain mapping.- Classification of Geounits and Variants.- Examples of Data[..]

Gossans and Leached Cappings

Field Assessment

This text concentrates upon field observations concerning leached cappings and gossans, occurring as oxidised surface expressions of underlying ore zones. Although the advent of modern multielement geochemical sampling and easier mechanical excavation assist considerably in subsurface interpretation, there are still many occasions where the first observation and recognition are made by the lone field geologist. New exposures continue to be found in remote and often difficult terrains, where “on the spot” skills are of prime importance. In general terms the text has been arranged from the broad scale to the specific, and it should be realised that all scales provide valuable input for final interpretation. The topics covered include:- Theoretical perspectives - Initial recognition - General field observations - Detailed field observations (secondary minerals, boxworks) - Porphyry copper leached cappings

Features

This text concentrates upon field observations concerning leached cappings and gossans, occurring as oxidised surface expressions of underlying ore zones. Although the advent of modern multielement geochemical sampling and easier mechanical excavation assist considerably in subsurface interpretation, there are still many occasions where the first observation and recognition are made by the lone field geologist.

Contents

Introduction - Theoretical perspectives - Initial recognition - Broad scale - first impressions - Structure (layering and brecciation) - Secondary minerals - Boxworks and related features - Leached cappings in porphyry copper systems - Concluding comments.

The Tectonics of China

Data, Maps and Evolution

"The Tectonics of China: Data, Maps and Evolution" presents the regional geological and petroleum surveys of China, the author's original tectonic data, and research results of Chinese and international scientists (more than 1500 references) from the last three decades. It examines the main developments of geological evolution, a series of tectonic events in the overall geological history, 13 tectonic maps of the entire continent of Asia in different tectonic epochs, and a general discussion of the main tectonic characteristics of the Chinese continental plate. This book also intensively discusses the Mesozoic-Cenozoic tectonics and intraplate deformations, which control the majority of ore deposits and oil gas reservoirs and have a tremendous influence on the climates and natural disasters on the continent. Some important tectonic theory problems are discussed, such as the mechanisms of the widespread intraplate deformation, the variation of lithosphere thickness, the existence of mantle plumes, etc.

Submarine Mass Movements and Their Consequences

5th International Symposium

Submarine mass movements represent major offshore geohazards due to their destructive and tsunami-generation potential. This potential poses a threat to human life as well as to coastal, nearshore and offshore engineering structures. Recent examples of catastrophic submarine landslide events that affected human populations (including tsunami) are numerous; e.g., Nice airport in 1979, Papua New Guinea in 1998, Stromboli in 2002, Finnfjord in 1996, and the 2006 and 2009 failures in the submarine cable network around Taiwan. The Great East Japan Earthquake in March 2011 also generated submarine landslides that may have amplified effects of the devastating tsunami. Given that 30% of the World’s population live within 60 km of the coast, the hazard posed by submarine landslides is expected to grow as global sea level rises. This elevated awareness of the need for better understanding of submarine landslides is coupled with great advances in submarine mapping, sampling and monitoring technologies.

Features

Modelling of Hydrological Processes in the Narew Catchment

Since climate and land use strongly affect the runoff pattern and intensity of solute export, it is likely that some observations and conclusions formulated on the basis of investigations carried out in forested catchment may not be fully adequate to describe controls on solute export from agricultural watersheds. The primary objective of the present research is to better understand the flow paths that affect the fluxes of dissolved compounds from a small agricultural catchment during snowmelt. This book focuses on spring snowmelt, because this is the dominant hydrological event in many moderate and high latitude catchments and, thus, is regarded as a prominent factor influencing the quality of surface waters.

Contents
Operational Rainfall/Snowmelt-runoff Model for Upper Narew River.- Multi-site Calibration and Validation of the Hydrological Component of SWAT in a large Lowland Catchment.- Automatic Calibration of the WetSpa Distributed Hydrological Model for small Lowland Catchments.- Modelling Hydrological Flow Paths during Snowmelt induced high flow event

The Art of Integration

This, the first comprehensive academic volume on vocational education and training (VET) or career and technical education in the United States, features insights into a variety of issues in this field of research. The international reader will find an up-to-date synthesis as well as a critical analysis of the relevant history, philosophy, governance, legislation and organizational structures. The coverage is structured according to the benchmarks applied to, as well as the theoretical discussions around, VET. The topics covered all have a strong contemporary relevance and include education versus qualification, the American community college, the issue of localization versus globalization in governance, vocationalism in higher education, career guidance and career counselling, and apprenticeships in the U.S. This book supports the assertion of the relevance of career and technical education — both for the individual and the labour market. Scholars, policy makers and practitioners interested in...

**Active Ageing, Active Learning**

**Issues and Challenges**

This book is concerned with the general issues of ageing, learning and education for the elderly and then with the more specific issues of why, how and what elders want to learn. This monograph consists of 10 chapters written by various internationally renowned researchers and scholar-practitioners in the field.

**Features**

This book is concerned with the general issues of ageing, learning and education for the elderly and then with the more specific issues of why, how and what elders want to learn. This monograph consists of 10 chapters written by various internationally renowned researchers and scholar-practitioners in the field. The world’s population is ageing rapidly. Ageing has an impact on all aspects of human life. This monograph discusses the implications of these changes for education.

**Surgical Education**

**Theorising an Emerging Domain**

Surgical Education: Theorising an Emerging Domain delineates surgical (as opposed to medical) education as a new and emerging field of academic enquiry. This reflects profound changes in healthcare training and practice on an international basis. As such, this book introduces, examines and explores the contribution of selected concepts and theories to surgical learning and practice. The first four chapters consider core facets of surgical education, such as simulation, while subsequent chapters take a key idea, often well known in another field, and examine its relevance to surgical education. Of course, performing invasive procedures is no longer the exclusive preserve of ‘traditional’ surgeons. Boundaries between surgery and the interventional specialties (radiology, cardiology, intensive care) are becoming increasingly blurred, especially as technology continues to expand. Changing work patterns and the complexity of interventional procedures mark this out as a major growth area.

**Features**

This book delineates surgical education as a new and emerging field of academic enquiry. Surgical (as opposed to medical) education is emerging as a distinct field with its own identity. Surgeons have started to professionalise their educational role, and draw professional, non-surgeon educators into the field. Surgery is a near unique environment of medical practice. Surgical (as opposed to medical) education is emerging as a distinct field with its own identity. Surgeons have started to professionalise their educational role, and draw professional, non-surgeon educators into the field. Surgery is a near unique environment of medical practice.

**From Text to ‘Lived’ Resources**

**Mathematics Curriculum Materials and Teacher Development**

What kinds of curriculum materials do mathematics teachers select and use, and how? This question is complex, in a period of deep evolutions of teaching resources, with the proficieny of online resources in particular. How do teachers learn from these materials, and in which ways do they ‘tailor’ them for their use and pupil learning? Teachers collect resources, select, transform, share, implement, and revise them. Drawing from the French term « ingénierie documentaire », we call these processes « documentation ». The literal English translation is « to work with documents », but the meaning it carries is richer. Documentation refers to the complex and interactive ways that teachers work with resources; in-class and out-of-class, individually, but also collectively.

**Features**

Curriculum materials and the interaction with these materials and resources is central in teacher education and professional development. How teachers use and learn from materials fundamentally depends on the interactions between three components: the reader, the material and the context. Teachers’ use and learning from text-based materials depends to a large extent on the characteristics of the materials.

Research on e-Learning and ICT in Education

This book aims to serve as a multidisciplinary forum covering technical, pedagogical, organizational, instructional, as well as policy aspects of ICT in Education and e-Learning. Special emphasis is given to applied research relevant to educational practice guided by the educational realities in schools, colleges, universities and informal learning organizations. In a more generic scope, the volume aims to encompass current trends and issues determining ICT integration in practice, including learning and teaching, curriculum and instructional design, learning media and environments, teacher education and professional development, assessment and evaluation, etc.

Features
An essential text for researchers and academics seeking the most comprehensive and up-to-date coverage of all aspects of ICT in education and e-learning, this book is a multidisciplinary forum covering technical, pedagogical, organizational, instructional, and policy aspects of the topic. Special emphasis is given to applied research relevant to educational practice and guided by the educational realities [...] .

Advances in Nature of Science Research

Concepts and Methodologies

This book consolidates contemporary thinking and research efforts in teaching and learning about the nature of science in science education. The term 'Nature of Science' (NoS) has appeared in the science education literature for many decades. While there is still a controversy among science educators about what constitutes NoS, educators are unanimous in acknowledging the importance of this topic as well as the need to make it explicit in teaching science. The general consensus is that the nature of science is an intricate and multifaceted theme that requires continued scholarship. Recent analysis of research trends in science education indicates that investigation of the nature of science continues to be one of the most prevalent topics in academic publications. Advances in Nature of Science Research explores teaching and assessing the nature of science as a means of addressing and solving problems in conceptual change, developing positive attitudes toward science, promoting thinking habits, [...].

Queer Masculinities

A Critical Reader in Education

Queer Masculinities: A Critical Reader in Education is a substantial addition to the discussion of queer masculinities, of the interplay between queer masculinities and education, and to the political gender discourse as a whole. Enriching the discourse of masculinity politics, the cross-section of scholarly interrogations of the complexities and contradictions of queer masculinities in education demonstrates that any serious study of masculinity—hermeneutic or otherwise—must consider the theoretical and political contributions that the concept of queer masculinity makes to a more comprehensive and nuanced understanding of masculinity itself. The essays adopt a range of approaches from empirical studies to reflective theorizing, and address themselves to three separate educational realms: the K-12 level, the collegiate level, and the level in popular culture, which could be called ‘cultural pedagogy’. The wealth of detailed analysis includes, for example, the notion that normative expectations and[...].

Features
Queer Masculinities: A Critical Reader in Education makes a substantial contribution to contemporary scholarship on gender and sexuality studies in education. Collectively the essays in this volume illuminate a broad range of queer practices and representations of masculinity in education, demonstrating that any serious study of masculinity must consider the theoretical and political contributions that the [...].

Contents
Part 1: Queer Masculinities at the K-12 Level. 1. Queering Masculinities in Male Teachers’ Lives; Wayne Martino.- 2. Queer Masculinities: Gender Conformity; and the Secondary School; Mark McCormack.- 3. Phallic Girls?: Girls’ Negotiation of Phallogocentric Power; Emma Renold and Jessica Ringrose.- 4. The Queer in Masculinity: Schooling; Boys, and Identity Formation; Máirtín Mac an Ghaill and Chris Haywood.- 5. Tangling with Masculinity: Butchness; Trans; and Feminism; Cris Mayo.- 6. Queering Classes: Disrupting Hegemonic Masculinity and the Effects of Compulsory Heterosexuality in the[...].

Learning Trajectories, Innovation and Identity for Professional Development

Educators in the professions have always had unique demands placed upon them. These include the need to keep pace with rapidly evolving knowledge bases, developing skills and attitudes appropriate to practice, learning in the workplace and fostering public confidence. For twenty years, these new demands have created additional educational imperatives. Public accountability has become more intensive and extensive. Practitioners practice in climates more subject to scrutiny and less forgiving of error. The contexts in which professionals practice and learn have changed and these changes involve global issues and problems. Often, professionals are the first responders who are required to take an active stance in defining and solving problems. This book explores the pedagogic implications of these challenges internationally for a wide range of professions which include: accountants, military company commanders, surgeons, nurse practitioners, academic, managers, community physicians and dentists. The[...]

International Perspectives on Teaching and Learning with GIS in Secondary Schools

This, the first publication to collate a broad international perspective on the pedagogical value of GIS technology in classrooms, offers an unprecedented range of expert views on the subject. Geographic Information Systems (GISs) are now ubiquitous and relatively inexpensive. They have revolutionized the way people explore and understand the world around them. The capability they confer allows us to capture, manage, analyze, and display geographic data in ways that were undreamt of a generation ago. GIS has enabled users to make decisions and solve problems as diverse as designing bus routes, locating new businesses, responding to emergencies, and researching climate change. GIS is also having a major impact in the classroom. Students and teachers around the world are using this significant emerging technology in the secondary school classroom to study social and scientific concepts and processes, to broaden their technical skills, and to engage in problem solving and decision making about local[...]

**Spelling Morphology**

The Psycholinguistics of Hebrew Spelling

Modern Hebrew is a highly synthetic Semitic language—its lexicon is rich in morphemes. This volume supplies the first in-depth psycholinguistic analysis of the interaction between morphological knowledge and spelling in Hebrew. It also examines how far this model can be applied to other languages. Anchored to a connectionist, cognitive, cross-linguistic and typological framework, the study accords with today’s perception of spelling as being much more than a mere technical skill. Contemporary psycholinguistic literature views spelling as a window on what people know about words and their structure. The strong correlation between orthographies and morphological units makes linking consistent grammatical and lexical representation and spelling units in speaker-writers a key research goal. Hebrew’s wealth of morphological structures, reflected in its written form, promotes morphological perception and strategies in those who speak and write it, adding vitality and relevance to this work.

Ethohydraulik
Grundlagen, Methoden und Erkenntnisse
Wasserbauliche Maßnahmen und Bauwerke, die z. B. der Unterhaltung von Gewässern, der Energiegewinnung oder der Ausleitung von Wasser dienen, haben maßgeblichen Einfluss auf aquatische Lebensräume. Allerdings sind die genauen Auswirkungen vor allem auf Fische bislang kaum untersucht und verstanden, da sich die Tiere aufgrund von Störungen und Trübungen einer direkten Beobachtung entziehen. Vor diesem Hintergrund wurde die Ethohydraulik entwickelt, um mit Hilfe von Lebendtierbeobachtungen in großskaligen, verglasten Laborratten zu untersuchen, wie sich aquatische Organismen in hydraulischen Situationen verhalten, die durch wasserbauliche Anlagen erzeugt werden. Die so gewonnenen Erkenntnisse erlauben die Ableitung konkreter Regeln und Grenzwerte in Hinblick auf eine gewässerökologisch verträglichere wasserbauliche Praxis. Das Buch erläutert die transdisziplinären biologischen und ingenieurtechnischen Grundlagen, dokumentiert die benötigten methodischen Instrumente und stellt anhand zahlreicher Beispiele [...]

Features
The desire for knowledge is an abiding facet of human experience and cultural development. This work documents curiosity as a sociohistorical force initiating research across the disciplines. Projects generated by theoretical curiosity are presented as historical and material practices emerging as expressions of embodied knowledge and experience. The shifting cultural, philosophical and practical relations between theory and curiosity are situated within classical, medieval, early modern and contemporary communities of practice. The Practice of Theoretical Curiosity advocates for a critical, aesthetic engagement in everyday life. Its purpose is to examine the pedagogical funds and questions that motivate research programs in the sciences, education, technoculture and post-war social movements. Theoretical curiosity continually resists disciplinary limits. It is a core, embodied process uniting human pursuits of knowledge and power. This inquiry into inquiry itself offers an appreciation of the [...]

Memory Controllers for Real-Time Embedded Systems

B. Akesson, Eindhoven University of Technology, The Netherlands; K. Goossens, Eindhoven University of Technology, The Netherlands

Predictable and Composable Real-Time Systems
Verification of real-time requirements in systems-on-chip becomes more complex as more applications are integrated. Predictable and composable systems can manage the increasing complexity using formal verification and simulation. This book explains the concepts of predictability and composable and shows how to apply them to the design and analysis of a memory controller, which is a key component in any real-time system.

Low Power RF Circuit Design in Standard CMOS Technology

Low Power Consumption is one of the critical issues in the performance of small battery-powered handheld devices. Mobile terminals feature an ever increasing number of wireless communication alternatives including GPS, Bluetooth, GSM, 3G, WiFi or DVB-H. Considering that the total power available for each terminal is limited by the relatively slow increase in battery performance expected in the near future, the need for efficient circuits is now critical. This book presents the basic techniques available to design low power RF CMOS analogue circuits. It gives circuit designers a complete guide of alternatives to optimize power consumption and explains the application of these rules in the most common RF building blocks: LNA, mixers and PLLs. It is set out using practical examples and offers a unique perspective as it targets designers working within the standard CMOS process and all the limitations inherent in these technologies.

Features

Applications of Chaos and Nonlinear Dynamics in Engineering - Vol. 1

Chaos and nonlinear dynamics initially developed as a new emergent field with its foundation in physics and applied mathematics. The highly generic, interdisciplinary quality of the insights gained in the last few decades has spawned myriad applications in almost all branches of science and technology—and even well beyond. Wherever quantitative modeling and analysis of complex, nonlinear phenomena is required, chaos theory and its methods can play a key role. This volume concentrates on reviewing the most relevant contemporary applications of chaotic nonlinear systems as they apply to the various cutting-edge branches of engineering. The book covers the theory as applied to robotics, electronic and communication engineering (for example chaos synchronization and cryptography) as well as to civil and mechanical engineering, where its use in damage monitoring and control is explored. Featuring contributions from active and leading research groups, this collection is ideal both as a reference and as a[...]

Environmental Wind Engineering and Design of Wind Energy Structures

The book presents a state-of-the-art in environmental aerodynamics and the structural design of wind energy support structures, particularly from a modern computational perspective. Examples include real-life applications dealing with pollutant dispersion in the building environment, pedestrian-level winds, comfort levels, relevant legislation and remedial measures. Design methodologies for wind energy structures include reliability assessment and code frameworks.

Speech Enhancement in the STFT Domain

This work addresses this problem in the short-time Fourier transform (STFT) domain. We divide the general problem into five basic categories depending on the number of microphones being used and whether the interface or interband correlation is considered. The first category deals with the single-channel problem where STFT coefficients at different frames and frequency bands are assumed to be independent. In this case, the noise reduction filter in each frequency band is basically a real gain. Since a gain does not improve the signal-to-noise ratio (SNR) for any given subband and frame, the noise reduction is basically achieved by liftering the subbands and frames that are less noisy while weighing down on those that are more noisy. The second category also concerns the single-channel problem. The difference is that now the interframe correlation is taken into account and a filter is applied in each subband instead of just a gain. The advantage of using the interframe correlation is that we can[...]

## Learning Structure and Schemas from Documents

The rapidly growing volume of available digital documents of various formats and the possibility to access these through Internet-based technologies, has led to the necessity to develop solid methods to properly organize and structure documents in large digital libraries and repositories. Due to the extremely large volumes of documents and to their unstructured form, most of the research efforts in this direction are dedicated to automatically infer structure and schemas that can help to better organize huge collections of documents and data. This book covers the latest advances in structure inference in heterogeneous collections of documents and data. The book brings a comprehensive view of the state-of-the-art in the area, presents some lessons learned and identifies new research issues, challenges and opportunities for further research agenda and developments. The selected chapters cover a broad range of research issues, from theoretical approaches to case studies and best practices in the [...]

## Built-in-Self-Test and Digital Self-Calibration for RF SoCs

This book will introduce design methodologies, known as Built-in-Self-Test (BIST) and Built-in-Self-Calibration (BISC), which enhance the robustness of radio frequency (RF) and millimeter wave (mmWave) integrated circuits (ICs). These circuits are used in current and emerging communication, computing, multimedia and biomedical products and microchips. The design methodologies presented will result in enhancing the yield (percentage of working chips in a high volume run) of RF and mmWave ICs which will enable successful manufacturing of such microchips in high volume.

### Features

## Mechatronic Systems

### Analysis, Design and Implementation

This book deals with the analysis, the design and the implementation of the mechatronic systems. Classical and modern tools are developed for the analysis and the design for such systems. Robust control, H-Infinity and guaranteed cost control theory are also used for analysis and design of mechatronic systems. Different controller such as state feedback, static output feedback and dynamic output feedback controllers are used to stabilize mechatronic systems. Heuristic algorithms are provided to solve the design of the classical controller such as PID, phase lead, phase lag and phase lead-lag controllers while linear matrix inequalities (LMI) algorithms are provided for finding solutions to the state feedback, static output feedback and dynamic output feedback controllers. The theory presented in the different chapters of the volume is applied to numerical examples to show the usefulness of the theoretical results. Some case studies are also provided to show how the developed concepts apply for real [...]

Natural Computing in Computational Finance

Volume 4

This book follows on from Natural Computing in Computational Finance Volumes I, II and III. As in the previous volumes of this series, the book consists of a series of chapters each of which was selected following a rigorous, peer-reviewed, selection process. The chapters illustrate the application of a range of cutting-edge natural computing and agent-based methodologies in computational finance and economics. The applications explored include option model calibration, financial trend reversal detection, enhanced indexation, algorithmic trading, corporate payout determination and agent-based modeling of liquidity costs, and trade strategy adaptation. While describing cutting edge applications, the chapters are written so that they are accessible to a wide audience. Hence, they should be of interest to academics, students and practitioners in the fields of computational finance and economics. which was selected following a rigorous, peer-reviewed, selection process. The chapters (...)

Intelligent Distributed Computing V

Proceedings of the 5th International Symposium on Intelligent Distributed Computing - IDC 2011, Delft, the Netherlands - October 2011

This book represents the combined peer-reviewed proceedings of the Fifth International Symposium on Intelligent Distributed Computing -- IDC 2011 and of the Third International Workshop on Multi-Agent Systems Technology and Semantics -- MASTS 2011. Both events were held in Delft, The Netherlands during October 5-7, 2011. The 33 contributions published in this book address many topics related to theory and applications of intelligent distributed computing and multi-agent systems, including: adaptive and autonomous distributed systems, agent programming, ambient assisted living systems, business process modelling and verification, cloud computing, coalition formation, decision support systems, distributed optimization and constraint satisfaction, gesture recognition, intelligent energy management in WSNs, intelligent logistics, machine learning, mobile agents, parallel and distributed computational intelligence, parallel evolutionary computing, trust metrics and security, scheduling in distributed (...)

Robotics, Vision and Control

Fundamental Algorithms in MATLAB

This book presents the practice of robotics and computer vision both involve the application of computational algorithms to data. Over the fairly recent history of the fields of robotics and computer vision a very large body of algorithms has been developed. However this body of knowledge is something of a barrier for anybody entering the field — What is the right algorithm for a particular problem?, and importantly, How can I try it out without spending days coding and debugging it from the original research papers? The author has maintained two open-source MATLAB Toolboxes for more than 10 years: one for robotics and one for vision. The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems, not trivial examples. For the student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used — instant gratification in just a couple of lines of(...)
Reliability, Availability and Serviceability of Networks-on-Chip

This book presents an overview of the issues related to the test, diagnosis and fault-tolerance of Network on Chip-based systems. It is the first book dedicated to the quality aspects of NoC-based systems and will serve as an invaluable reference to the problems, challenges, solutions, and trade-offs related to designing and implementing state-of-the-art, on-chip communication architectures.

Fractional Order Signal Processing

Introductory Concepts and Applications

The book tries to briefly introduce the diverse literatures in the field of fractional order signal processing which is becoming an emerging topic among an interdisciplinary community of researchers. This book is aimed at postgraduate and beginning level research scholars who would like to work in the field of Fractional Order Signal processing (FOSP). The readers should have preliminary knowledge about basic signal processing techniques. Prerequisite knowledge of fractional calculus is not essential and is exposed at relevant places in connection to the appropriate signal processing topics. Basic signal processing techniques like filtering, estimation, system identification, etc. in the light of fractional order calculus are presented along with relevant application areas. The readers can easily extend these concepts to varied disciplines like image or speech processing, pattern recognition, time series forecasting, financial data analysis and modeling, traffic modeling in communication channels. [...] Features

Machining of Metal Matrix Composites

Machining of Metal Matrix Composites provides the fundamentals and recent advances in the study of machining of metal matrix composites (MMCs). Each chapter is written by an international expert in this important field of research. Machining of Metal Matrix Composites gives researchers the reader information on machining of MMCs with a special emphasis on aluminium matrix composites. Chapter 1 provides the mechanics and modelling of chip formation for traditional machining processes. Chapter 2 is dedicated to surface integrity when machining MMCs. Chapter 3 describes the machinability aspects of MMCs. Chapter 4 contains information on traditional machining processes and Chapter 5 is dedicated to the grinding of MMCs. Chapter 6 describes the dry cutting of MMCs with SiC particulate reinforcement. Finally, Chapter 7 is dedicated to computational methods and optimization in the machining of MMCs. Machining of Metal Matrix Composites can serve as a useful reference for academics, manufacturing and materials [...] Features

Analog Electronic Filters

Theory, Design and Synthesis

There are some very good textbooks in Filter Theory and Design so why do we need a new one? We have been active in researching and teaching the field of electronic filters for more than three decades at both undergraduate and postgraduate courses and from our experience the depth and coverage offered by the existing books falls short on several counts. Indeed, most of the existing books concentrate on the active filters alone even though many of the design principles may stem from passive filter theory. Our long experience and involvement in all facets of the subject have enabled us to provide a coherent and seamless framework that encompasses passive and active filters and includes the most modern and up to date design methodologies. Analogue Electronic Filters is suitable both for undergraduate and postgraduate students and also for professionals who wish to understand in depth and apply filter synthesis and design methods. Recently one of the authors published a similar book in Greek. The...[]

Features

Filters are essential subsystems in a huge variety of electronic systems. Filter applications are innumerable; they are used for noise reduction, demodulation, signal detection, multiplexing, sampling, sound and speech processing, transmission line equalization and image processing, to name just a few. In practice, no electronic system can exist without filters. They can be found in transmission line equalization and image processing, demodulation, signal detection, multiplexing, sampling, sound and speech processing, transmission line equalization and image processing, to name just a few. Recent Advances in Intelligent Engineering Systems

This volume is a collection of 19 chapters on intelligent engineering systems written by respectable experts of the fields. The book consists of three parts. The first part is devoted to the foundational aspects of computational intelligence. It consists of 8 chapters that include studies in genetic algorithms, fuzzy logic connectives, enhanced intelligence in product models, nature-inspired optimization technologies, particle swarm optimization, evolution algorithms, model complexity of neural networks, and fitness landscape analysis. The second part contains contributions to intelligent computation in networks, presented in 5 chapters. The covered subjects include the application of self-organizing maps for early detection of denial of service attacks, combating security threats via immunity and adaptability in cognitive radio networks, novel modifications in WSN network design for improved SNR and reliability, a conceptual framework for the design of audio based cognitive infocommunication […]

Methods and Tastes in Modern Continuum Mechanics

To the Memory of Donald E. Carlson

This book is dedicated to the memory of Donald E. Carlson, who enjoyed a long distinguished career as a Professor of Theoretical and Applied Mechanics at the University of Illinois at Urbana-Champaign; he influenced the mechanics community through his teachings, publications and interactions. The book disseminates unique research investigations which give breadth and depth to the field of continuum mechanics and provide a vision for future advancements. The common bond of Don’s publications was his sound theoretical developments and fundamental insight. He carefully delineated the principal roles of kinematics, conservation laws (including the second law of thermodynamics) and constitutive assumptions not only in his discussions and writings about fundamentals in mechanics but also in his work on the formulation of initial-boundary value problems that arise in modeling the behavior of elastic and thermoelastic bodies. This book expands this lucid practice by applying these roles to model a plethora […]

ECG Signal Processing, Classification and Interpretation

A Comprehensive Framework of Computational Intelligence

The book shows how the various paradigms of computational intelligence, employed either singly or in combination, can produce an effective structure for obtaining often vital information from ECG signals. The text is self-contained, addressing concepts, methodology, algorithms, and case studies and applications, providing the reader with the necessary background augmented with step-by-step explanation of the more advanced concepts. It is structured in three parts: Part I covers the fundamental ideas of computational intelligence together with the relevant principles of data acquisition, morphology and use in diagnosis; Part II deals with techniques and models of computational intelligence that are suitable for signal processing; and Part III details ECG system-diagnostic interpretation and knowledge acquisition architectures. Illustrative material includes: brief numerical experiments; detailed schemes, exercises and more advanced problems.

Features
- Electrocardiogram (ECG) signals are among the most important sources of diagnostic information in healthcare so improvements in their analysis may also have telling consequences. Both the underlying signal technology and a burgeoning variety of algorithms and systems developments have proved successful targets for recent rapid advances in research.

Network Reliability and Resilience

This book is devoted to the probabilistic description of the behavior of a network in the process of random removal of its components (links, nodes) appearing as a result of technical failures, natural disasters or intentional attacks. It is focused on a practical approach to network reliability and resilience evaluation, based on applications of Monte Carlo methodology to numerical approximation of network combinatorial invariants, including so-called multidimensional destruction spectra. This allows to develop a probabilistic follow-up analysis of the network in the process of its gradual destruction, to identify most important network components and to develop efficient heuristic algorithms for network optimal design. Our methodology works with satisfactory accuracy and efficiency for most applications of reliability theory to real-life problems in networks.

Features
This book is devoted to the probabilistic description of a network in the process of its destruction, i.e. removal of its components (links, nodes) appearing as a result of technical failures, natural disasters or intentional attacks. It is focused on a practical approach to network reliability, based on application of Monte Carlo methodology to numerical evaluation of network most important structural [...]

Supply Chain Disruptions

Theory and Practice of Managing Risk

One of the most critical issues facing supply chain managers in today’s globalized and highly uncertain business environments is how to deal proactively with disruptions that might affect the complicated supply networks characterizing modern enterprises. Supply Chain Disruptions: Theory and Practice of Managing Risk presents a state-of-the-art perspective on this particular issue. Supply Chain Disruptions: Theory and Practice of Managing Risk demonstrates that effective management of supply disruptions necessitates both strategic and tactical measures – the former involving optimal design of supply networks; the latter involving inventory, finance and demand management. It shows that managers ought to use all available levers at their disposal throughout the supply network – like sourcing and pricing strategies, providing financial subsidies, encouraging information sharing and incentive alignment between supply chain partners – in order to tackle supply disruptions. The editors combine up-to-date [...]

Human – Computer Systems
Interaction: Backgrounds and Applications 2

Part 1
The main contemporary human-system interaction (H-SI) problems consist in design and/or improvement of the tools for effective exchange of information between individual humans or human groups and technical systems created for humans aiding in reaching their vital goals. This book is a second issue in a series devoted to the novel in H-SI results and contributions reached for the last years by many research groups in European and extra-European countries. The preliminary (usually shortened) versions of the chapters were presented as conference papers at the 3rd International Conference on H-SI held in Rzeszow, Poland, in 2010. A large number of valuable papers selected for publication caused a necessity to publish the book in two volumes. The given, 1st Volume consists of sections devoted to I. Decision Supporting Systems, II. Distributed Knowledge Bases and WEB Systems and III. Impaired Persons Aiding Systems. The decision supporting systems concern various application areas, like enterprises.[...]

CMOS High Efficiency On-chip Power Management

This book will introduce various power management integrated circuits (IC) design techniques to build future energy-efficient "green" electronics. The goal is to achieve high efficiency, which is essential to meet consumers' growing need for longer battery lives. The focus is to study topologies amiable for full on-chip implementation (few external components) in the mainstream CMOS technology, which will reduce the physical size and the manufacturing cost of the devices.

Features
This book deals with the subject matter of power management integrated circuit (IC) design, or integrated power electronics, as a response to the growing need for energy-efficient electronics. The authors introduce various power management IC design techniques to build future energy-efficient “green” electronics. The goal is to achieve high efficiency, which is essential to meet consumers' growing need for [...]
Mechatronic Systems Design

Methods, Models, Concepts

In this textbook, fundamental methods for model-based design of mechatronic systems are presented in a systematic, comprehensive form. The method framework presented here comprises domain-neutral methods for modeling and performance analysis: multi-domain modeling (energy/port/signal-based), simulation (ODE/DAE/hybrid systems), robust control methods, stochastic dynamic analysis, and quantitative evaluation of designs using system budgets. The model framework is composed of analytical dynamic models for important physical and technical domains of realization of mechatronic functions, such as multi-body dynamics, digital information processing and electromechanical transducers. Building on the modeling concept of a technology-independent generic mechatronic transducer, concrete formulations for electrostatic, piezoelectric, electromagnetic, and electrodynamic transducers are presented. More than 50 fully worked out design examples clearly illustrate these methods and concepts and enable independent self-study.

Features

In this textbook, fundamental methods for model-based design of mechatronic systems are presented in a systematic, comprehensive form. The method framework presented here comprises domain-neutral methods for modeling and performance analysis: multi-domain modeling (energy/port/signal-based), simulation (ODE/DAE/hybrid systems), robust control methods, stochastic dynamic analysis, and quantitative evaluation of designs using system budgets.

Advances in Computer Science, Intelligent Systems and Environment

Vol.1

CSISE2011 is an integrated conference concentrating its focus upon Computer Science, Intelligent System and Environment. In the proceeding, you can learn much more knowledge about Computer Science, Intelligent System and Environment of researchers all around the world. The international conference will provide a forum for engineers, scientist, teachers and all researchers to discuss their latest research achievements and future research in the mentioned field. In order to meet high standard of Springer’s Advances in Intelligent and Soft Computing the organization committee has made their efforts to do the following things. Firstly, the organization has been selected the best and quality papers. After reviewing by anonymous referees, Secondly, periodically review meetings have been held around the reviewers about five times for exchanging reviewing suggestions. Finally, the conference organization had [...]

Logistic Core Operations with SAP

Procurement, Production and Distribution Logistics

“Logistic Core Operations with SAP” not only provides an overview of core logistics processes and functionality—it also shows how SAP’s Business Suite covers logistic core operations, what features are supported, and which systems can be used to implement end-to-end processes in the following logistic core disciplines: Procurement, Distribution, Transportation, Warehouse Logistics and Inventory Management, and Compliance and Reporting. In this context the authors not only explain their integration, the organizational set-up, and master data, but also which solution fits best for a particular business need. This book serves as a solid foundation for understanding SAP software. No matter whether you are a student or a manager involved in an SAP implementation, the authors go far beyond traditional function and feature descriptions, helping you ask the right questions, providing answers, and making recommendations. The book assists you in understanding SAP terminology, concepts and technological [...] Features

Multiphase Flow Dynamics 2

Mechanical Interactions

Multi-phase flows are part of our natural environment such as tornadoes, typhoons, air and water pollution and volcanic activities as well as part of industrial technology such as power plants, combustion engines, propulsion systems, or chemical and biological industry. The industrial use of multi-phase systems requires analytical and numerical strategies for predicting their behavior. In its fourth extended edition the successful monograph package “Multiphase Flow Dynamics” contains theory, methods and practical experience for describing complex transient multi-phase processes in arbitrary geometrical configurations, providing a systematic presentation of the theory and practice of numerical multi-phase fluid dynamics. In the present second volume the methods for describing the mechanical interactions in multiphase dynamics are provided. This fourth edition includes various updates, extensions, improvements and corrections. “The literature in the field of multiphase flows is numerous. Therefore, [...]”

Multiphase Flow Dynamics 5

Nuclear Thermal Hydraulics

The present Volume 5 of the successful book package "Multiphase Flow Dynamics" is devoted to nuclear thermal hydraulics which is a substantial part of nuclear reactor safety. It provides knowledge and mathematical tools for adequate description of the process of transferring the fission heat released in materials due to nuclear reactions into its environment. It step by step introduces into the heat release inside the fuel, temperature fields in the fuels, the "simple" boiling flow in a pipe described using ideas of different complexity like equilibrium, non equilibrium, homogeneity, non homogeneity. Then the "simple" three-fluid boiling flow in a pipe is described by gradually involving the mechanisms like entrainment and deposition, dynamic fragmentation, collisions, coalescence, turbulence. All heat transfer mechanisms are introduced gradually discussing their uncertainty. Different techniques are introduced like boundary layer treatments or integral methods. Comparisons with experimental data at...[ ]

Springer Handbook of Medical Technology

This concise, user-oriented and up-to-date desk reference offers a broad introduction to the fascinating world of medical technology, fully considering today's progress and further development in all relevant fields. The Springer Handbook of Medical Technology is a systemized and well-structured guideline which distinguishes itself through simplification and condensation of complex facts. This book is an indispensable resource for professionals working directly or indirectly with medical systems and appliances every day. It is also meant for graduate and post graduate students in hospital management, medical engineering, and medical physics.

Reliability Engineering
Basic Concepts and Applications in ICT

This book gives a practical guide for designers and users in Information and Communication Technology context. In particular, in the first Section, the definition of the fundamental terms according to the international standards are given. Then, some theoretical concepts and reliability models are presented in Chapters 2 and 3: the aim is to evaluate performance for components and systems and reliability growth. Chapter 4, by introducing the laboratory tests, puts in evidence the reliability concept from the experimental point of view. In ICT context, the failure rate for a given system can be evaluate by means of specific reliability prediction handbooks; this aspect is considered in Chapter 5, with practical applications. In Chapters 6, 7 and 8, the more complex aspects regarding both the Maintainability, Availability and Dependability are taken into account; in particular, some fundamental techniques such as FMECA (Failure Mode, Effects, and Criticality Analysis) and FTA (Fault Tree Analysis) are [...] Features
It is well known that reliability and dependability are assuming a strategic role in all contexts where product performance and safety are specific requirements. To this purpose this book represents a practical guide for designers and users in Information and Communication Technology area and for those that treat the different stages of the life cycle of products. Starting from the definition of [...]

Mechanics of Crustal Rocks

The mechanical behaviour of the earth’s upper crust enters into a great variety of questions in different areas of the geological and geophysical sciences as well as in the more applied geotechnical disciplines. This volume presents a selection of papers from a CISM course in Udine on this topic. While each of these chapters will make for a useful contribution in its own right, the present bundle also illustrates, by way of examples, the variety of theoretical concepts and tools that are currently brought to bear on earth deformation studies, ranging from reviews of poroelastic field theory to micro-mechanical and homogenization studies, chemomechanics and interfacial stability theory of soluble solids under stress, and finally to an introduction to the finite element method.

Features

Advances in Cell Mechanics

“Advances in Cell Mechanics” presents the latest developments in cell mechanics and biophysics, mainly focusing on interdisciplinary research in cell biology and the biophysics of cells. Moreover, a unique feature of the book is its emphasis on the molecular and complex continuum modeling and simulations of the cells. It may be the first work that brings rigorous and quantitative scientific analysis and state-of-the-art simulation technology into cell biology research. The book is intended for researchers and graduate students working in the fields of molecular cell biology, bio-engineering and bio-mechanics, soft matter physics, computational mechanics, bio-chemistry and bio-medicine. All contributors are leading scholars in their respective fields. Dr. Shaofan Li is a professor and an expert for computational mechanics at the University of California-Berkeley, USA; Dr. Bohua Sun is a professor at Cape Peninsula University of Technology, South Africa.

Understanding Violence
The Interwining of Morality, Religion and Violence: A Philosophical Stance

This volume sets out to give a philosophical "applied" account of violence, engaging with both empirical and theoretical debates in other disciplines such as cognitive science, sociology, psychiatry, anthropology, political theory, evolutionary biology, and theology. The book’s primary thesis is that violence is inescapably intertwined with morality and typically enacted for "moral" reasons. To show this, the book compellingly demonstrates how morality operates to trigger and justify violence and how people, in their violent behaviors, can engage and disengage with discrete moralities. The author’s fundamental account of language, and in particular its normative aspects, is particularly insightful as regards extending the range of what is to be understood as violence beyond the domain of physical harm. By employing concepts such as "coercion", "moral bubbles", "cognitive niches", "moral overmoralization", "military intelligence" and so on, the book aims to spell out how perpetrators and

Contents

Features
This volume sets out to give a philosophical "applied" account of violence, engaging with both empirical and theoretical debates in other disciplines such as cognitive science, sociology, psychiatry, anthropology, political theory, evolutionary biology, and theology. The book’s primary thesis is that violence, also understood as violence beyond the domain of physical harm, is inescapably intertwined with

Biomechanics and Mechatronics of Aneurysms
Cardiovascular disease is the leading cause of morbidity and premature death of modern era medicine. It is estimated that approximately 81 million people in the United States (US) currently have one or more of the many forms of cardiovascular disease, resulting in 1 in every 2.8 deaths, or 900,000 deaths per year. 40% of all deaths in Europe are a result of cardiovascular disease in people under the age of 75. Aneurysms form a significant portion of these cardiovascular related deaths and are defined as a permanent and irreversible localized dilation of a blood vessel greater than 50% of its normal diameter. Although aneurysms can form in any blood vessel, the more lethal aneurysms develop in the cranial arteries, and in the thoracic aorta and abdominal aorta. Frequently aneurysms are undetected and if left untreated may eventually expand until rupture with very high levels of morbidity and mortality. The biomechanics and mechatronics of aneurysmal diseases are not fully understood and this...

Modeling, Learning, and Processing of Text-Technological Data Structures

Researchers in many disciplines have been concerned with modeling textual data in order to account for texts as the primary information unit of written communication. The book “Modeling, Learning and Processing of Text-Technological Data Structures” deals with this challenging information unit. It focuses on theoretical foundations of representing natural language texts as well as on concrete operations of automatic text processing. Following this integrated approach, the present volume includes contributions to a wide range of topics in the context of processing of textual data. This relates to the learning of ontologies from natural language texts, the annotation and automatic parsing of texts as well as the detection and tracking of topics in texts and hypertexts. In this way, the book brings together a wide range of approaches to procedural aspects of text technology as an emerging scientific discipline.

Features

Ultra-Wideband Radio Frequency Identification Systems

Ultra-Wideband Radio Frequency Identification Systems describes the essentials of radio frequency identification systems as well as their target markets. The authors provide a study of commercially available RFID systems and characterizes their performance in terms of read range and reliability in the presence of conductive and dielectric materials. The capabilities and limitations of some commercial RFID systems are reported followed by comprehensive discussions of the advantages and challenges of using ultra-wideband technology for tag/reader communications. The book presents practical aspects of UWB RFID system such as: pulse generation, remote powering, tag and reader antenna design, as well as special applications of UWB RFIDs in a simple and easy-to-understand language.

**Fiber-Optic Transmission Networks**

Efficient Design and Dynamic Operation

Next generation optical communication systems will have to transport a significantly increased data volume at a reduced cost per transmitted bit. To achieve these ambitious goals optimum design is crucial in combination with dynamic adaptation to actual traffic demands and improved energy efficiency. In the first part of the book the author elaborates on the design of optical transmission systems. Several methods for efficient numerical simulation are presented ranging from meta-model based optimization to parallelization techniques for solving the nonlinear Schrödinger equation. Furthermore, fast analytical and semi-analytical models are described to estimate the various degradation effects occurring on the transmission line. In the second part of the book operational aspects of optical networks are investigated. Physical layer impairment-aware routing and regenerator placement are studied. Finally, it is analyzed how the energy efficiency of a multi-layer optical core network can be increased by...[–]

**Safety and Risk Modeling and Its Applications**

Safety and Risk Modeling presents the latest theories and methods of safety and risk with an emphasis on safety and risk in modeling. It covers applications in several areas including transportations and security risk assessments, as well as applications related to current topics in safety and risk. Safety and Risk Modeling is a valuable resource for understanding the latest developments in both qualitative and quantitative methods of safety and risk analysis and their applications in operating environments. Each chapter has been written by active researchers or experienced practitioners to bridge the gap between theory and practice and to trigger new research challenges in safety and risk. Topics include: safety engineering, system maintenance, safety in design, failure analysis, and risk concept and modelling. Postgraduate students, researchers, and practitioners in many fields of engineering, operations research, management, and statistics will find Safety and Risk Modeling a state-of-the-art...

**Solar Lighting**

Limited availability of grid-based electricity is a major challenge faced by many developing countries, particularly the rural population. Fuel-based lighting, such as the kerosene lantern, is widespread in these areas, but it is a poor alternative, contributing to global warming and causing serious health problems. Several developing countries are therefore now encouraging the use of sustainable lighting. Solar Lighting gives an in-depth analysis of energy-efficient light production through the use of solar-powered LED systems. The authors pay particular attention to the interplay between energy transformation and device efficiency. They also discuss diverse aspects of renewable energy, including how an improvement in the efficiency of appliances can reduce the cost of energy. Solar Lighting is written for physicists, environmental experts and lighting engineers. It is also suitable for undergraduate students in the fields of environmental science, electrical engineering and renewable energy.

Speech Processing and Soft Computing

Speech Processing and Soft Computing includes coverage of synergy between speech technology and bio-inspired soft computing methods. Through practical cases, the author explores, dissects and examines how soft computing may complement conventional techniques in speech enhancement and speech recognition in order to provide robust systems. The material is especially useful to graduate students and experienced researchers who are interested in expanding their horizons and investigating new research directions through review of the theoretical and practical settings of soft computing methods in very recent speech applications.

Principles of Mobile Communication

Principles of Mobile Communication, Third Edition, is an authoritative treatment of the fundamentals of mobile communications. This book stresses the "fundamentals" of physical-layer wireless and mobile communications engineering that are important for the design of "any" wireless system. This book differs from others in the field by stressing mathematical modeling and analysis. It includes many detailed derivations from first principles, extensive literature references, and provides a level of depth that is necessary for graduate students wishing to pursue research on this topic. The book's focus will benefit students taking formal instruction and practicing engineers who are likely to already have familiarity with the standards and are seeking to increase their knowledge of this important subject. Major changes from the second edition: 1. Updated discussion of wireless standards (Chapter 1). 2. Updated treatment of land mobile radio propagation to include space-time correlation functions. [...] Features

This mathematically rigorous overview of physical layer wireless communications is now in a third, fully revised and updated edition. Along with coverage of basic principles sufficient for novice students, the volume includes plenty of finer details that will satisfy the requirements of graduate students aiming to research the topic in depth. It also has a role as a handy reference for wireless engineers. [...] Contents

Introduction to Hardware Security and Trust

This book provides the foundations for understanding hardware security and trust, which have become major concerns for national security over the past decade. Coverage includes security and trust issues in all types of electronic devices and systems such as ASICs, COTS, FPGAs, microprocessors/DSIs, and embedded systems. This serves as an invaluable reference to the state-of-the-art research that is of critical significance to the security of, and trust in, modern society's microelectronic-supported infrastructures.

Features

The emergence of a globalized, horizontal semiconductor business model raises a set of concerns involving the security and trust of the information systems on which modern society is increasingly reliant for mission-critical functionality. Hardware-oriented security and trust issues span a broad range including threats related to the malicious insertion of Trojan circuits designed, e.g., to act as a 'kill'. [...] Contents

Test and Diagnosis for Small-Delay Defects

This book will introduce new techniques for detecting and diagnosing small-delay defects in integrated circuits. Although this sort of timing defect is commonly found in integrated circuits manufactured with nanometer technology, this will be the first book to introduce effective and scalable methodologies for screening and diagnosing small-delay defects, including important parameters such as process variations, crosstalk, and power supply noise.

Features

This book introduces new techniques for detecting and diagnosing small-delay defects (SDD) in integrated circuits. Although this sort of timing defect is commonly found in integrated circuits manufactured with nanometer technology, this will be the first book to introduce effective and scalable methodologies for screening and diagnosing small-delay defects, including important parameters such as process[...]

Contents

Introduction to VLSI Testing. - Delay Test and System-Delay Defects. - Long Path-Based Hybrid Method. - Process Variations. - Crosstalk-Induced SDDs by Using Dynamic SDF. - Faster-than-at-speed Test. - Introduction to Diagnosis. - Diagnosing Noise-Induced SDDs by Using Dynamic SDF.

Functional Observers for Dynamical Systems

The theory of linear functional observers, which is the subject of this book, is increasingly becoming a popular researched topic because of the many advantages it presents in state observation and control system design. This book presents recent information on the current state of the art research in this field. This book will serve as a useful reference to researchers in this area of research to understand the fundamental concepts relevant to the theory of functional observers and to gather most recent advancements in the field. This book is useful to academics and postgraduate students researching into the theory of linear functional observers. This book can also be useful for specialized final year undergraduate courses in control systems engineering and applied mathematics with a research focus.

Embedded Automation in Human-Agent Environment

This research book proposes a general conceptual framework for the development of automation in human-agents environments that will allow human-agent teams to work effectively and efficiently. We examine various schemes to implement artificial intelligence techniques in agents. The text is directed to the scientists, application engineers, professors and students of all disciplines, interested in the agency methodology and applications.

Optimization Based Clearance of Flight Control Laws

A Civil Aircraft Application

This book summarizes the main achievements of the EC funded 6th Framework Program project COFCLUO – Clearance of Flight Control Laws Using Optimization. This project successfully contributed to the achievement of a top-level objective to meet society’s needs for a more efficient, safer and environmentally friendly air transport by providing new techniques and tools for the clearance of flight control laws. This is an important part of the certification and qualification process of an aircraft – a costly and time-consuming process for the aeronautical industry. The overall objective of the COFCLUO project was to develop and apply optimization techniques to the clearance of flight control laws in order to improve efficiency and reliability. In the book, the new techniques are explained and benchmarked against traditional techniques currently used by the industry. The new techniques build on mathematical criteria derived from the certification and qualification requirements together with suitable [...]
Multi-objective Evolutionary Optimisation for Product Design and Manufacturing

With the increasing complexity and dynamism in today's product design and manufacturing, more optimal, robust and practical approaches and systems are needed to support product design and manufacturing activities. Multi-objective Evolutionary Optimisation for Product Design and Manufacturing presents a focused collection of quality chapters on state-of-the-art research efforts in multi-objective evolutionary optimisation, as well as their practical applications to integrated product design and manufacturing. Multi-objective Evolutionary Optimisation for Product Design and Manufacturing consists of two major sections. The first presents a broad-based review of the key areas of research in multi-objective evolutionary optimisation. The second gives in-depth treatments of selected methodologies and systems in intelligent design and integrated manufacturing. Recent developments and innovations in multi-objective evolutionary optimisation make Multi-objective Evolutionary Optimisation for Product Design and Manufacturing a unique focus on the capabilities of fast spectrum reactors to address nuclear waste transmutation issues, in addition to the well-known capabilities of breeding new fuel, this volume describes how fast spectrum reactors contribute to the wide application of common properties.

Managing Temperature Effects in Nanoscale Adaptive Systems

This book discusses new techniques for detecting, controlling, and exploiting the impacts of temperature variations on nanoscale circuits and systems. A new sensor system is described that can determine the temperature dependence as well as the operating temperature to improve system reliability. A new method is presented to control a circuit’s temperature dependence by individually tuning pull-up and pull-down networks to their temperature-insensitive operating points. This method extends the range of supply voltages that can be made temperature-insensitive, achieving insensitivity at nominal voltage for the first time.

Features
This book discusses new techniques for detecting, controlling, and exploiting the impacts of temperature variations on nanoscale circuits and systems. It provides a holistic discussion of temperature management, including physical phenomena (reversal of the MOSFET temperature dependence) that have recently become problematic, along with circuit techniques for detecting, controlling, and adapting to these [...]

Atomic Force Microscopy Based Nanorobots

Modelling, Simulation, Setup Building and Experiments

The atomic force microscope (AFM) has been successfully used to perform nanorobotic manipulation operations on nanoscale entities such as particles, nanotubes, nanowires, nanocrystals, and DNA since 1990s. There have been many progress on modeling, imaging, teleoperated or automated control, human-machine interfacing, instrumentation, and applications of AFM based nanorobotic manipulation systems in literature. This book aims to include all of such state-of-the-art progress in an organized, structured, and detailed manner as a reference book and also potentially a textbook in nanorobotics and any other nanoscale dynamics, systems and controls related research and education. Clearly written and well-organized, this text introduces designs and prototypes of the nanorobotic systems in detail with innovative principles of three-dimensional manipulation force microscopy and parallel imaging/manipulation force microscopy.

Features
The atomic force microscope (AFM) has been successfully used to perform nanorobotic manipulation operations on nanoscale entities such as particles, nanotubes, nanowires, nanocrystals, and DNA since 1990s. There have been many progress on modeling, imaging, teleoperated or automated control, human-machine interfacing, instrumentation, and applications of AFM based nanorobotic manipulation systems in [...]
Theory of Periodic Conjugate Heat Transfer

This book presents the theory of periodic conjugate heat transfer in a detailed way. The effects of thermophysical properties and geometry of a solid body on the commonly used and experimentally determined heat transfer coefficient are analytically presented from a general point of view. The main objective of the book is a simplified description of the interaction between a solid body and a fluid as a boundary value problem of the heat conduction equation for the solid body. At the body surface, the true heat transfer coefficient is composed of two parts: the true mean value resulting from the solution of the steady state heat transfer problem and a periodically variable part, the periodic time length to describe the oscillatory hydrodynamic effects. The second edition is extended by (i) the analysis of stability boundaries in helium flow at supercritical conditions in a heated channel with respect to the interaction between a solid body and a fluid; (ii) a periodic model and a method of heat transfer.\[\ldots]\]

Features

This book presents the theory of periodic conjugate heat transfer in a detailed way. The effects of thermophysical properties and geometry of a solid body on the commonly used and experimentally determined heat transfer coefficient are analytically presented from a general point of view. The main objective of the book is a simplified description of the interaction between a solid body and a fluid as a boundary.\[\ldots]\]

Advances in Numerical Modeling of Adhesive Joints

This book deals with the most recent numerical modeling of adhesive joints. Advances in damage mechanics and extended finite element method are described in the context of the Finite Element method with examples of application. The book also introduces the classical continuum mechanics and fracture mechanics approach and discusses the boundary element method and the finite difference method with indication of the cases they are most adapted to. At the moment there is a numerical technique that can solve any problem and the analyst needs to be aware of the limitations involved in each case.

Environment

Challenging Legitimacy at the Precipice of Energy Calamity

Human history has often been described as a progressive relinquishment from environmental constraints. Now, it seems, we have come full circle. The ecological irrationalities associated with industrial societies have a lengthy history, and our purpose in the proposed book is not to catalogue this litany of wrongs. Rather, this book is about political responses to global environmental crisis at a crucial turning point in history, by focusing on the political discourses surrounding the tar sands in Alberta, Canada.

Features

Two intersecting moments of the Twenty-first Century define our politics, economics, and future prospects for civilization: the mounting evidence for global climate change, now unequivocally attributed to socio-economic activities, and its de-stabilizing effects on our biosphere, combined with the end of easy oil and the easy wealth it generates. On the energy question, non-conventional fossil fuels have [...]

**Metaphorical Management**

**Using Intuition and Creativity as a Guiding Mechanism for Complex Systems**

In times of general instability change management is a great challenge. Our fossil mental patterns are not sufficient any more to be able to navigate sensibly the global scenario of complexity. Metaphorical thinking is a method which releases creative impulses into every change process and is of practical use, activating collective knowledge as a new network resource at the same time. This book reflects modern economy, ecology, sustainability and perception from an artistic perspective. However, it is not so much about “art”, but rather how the modern artist takes on a serving role in the social arena again. He makes his creative knowledge available to connect processes of large-scale social development, he extends the boundaries of our scientifically limited world view and creates inspired playgrounds where the sensory-visionary can freely interact with the technically-necessary. This is no new aesthetic theory but rather a practical application of the creative process in operation at the...[

**Teaching Environmental Health to Children**

**An Interdisciplinary Approach**

Every day we are exposed to toxins and toxicants that can impact our health. Yet we rarely teach elementary and secondary students about these exposures and how they can reduce their risk to them. In this book we highlight activities and curriculum developed at nine universities in the United States from a grant funded by the National Institute of Environmental Health Sciences. Our goal is to extend these lessons to a global audience and for classroom teachers of all subjects and age levels to include environmental health in their teaching. ‘An invaluable tool for equipping informed citizens to think about the environment and its human impacts – both the science, and equally important, the social and ethical dimensions’, Howard Frumkin, M.D., Dr. P.H., Dean, School of Public Health, University of Washington, Seattle, WA, USA

**Experimental and Theoretical Advances in Fluid Dynamics**

The book is comprised of lectures and selected contributions presented at the Enzo Levi and XVI Annual Meeting of the Fluid Dynamic Division of the Mexican Physical Society in 2010. It is aimed at fourth year undergraduate and graduate students, as well as scientists in the fields of physics, engineering and chemistry with an interest in fluid dynamics from the experimental and theoretical point of view. The lectures are introductory and avoid the use of complicated mathematics. The other selected contributions are also geared to fourth year undergraduate and graduate students. The fluid dynamics applications include multiphase flow, convection, diffusion, heat transfer, rheology, granular material, viscous flow, porous media flow, geophysics and astrophysics. The material contained in the book includes recent advances in experimental and theoretical fluid dynamics and will be of great use to those involved in either teaching and/or research.

It is aimed at fourth year undergraduate and graduate students, as well as scientists in the fields of physics, engineering and chemistry with an interest in fluid dynamics from the experimental and theoretical point of view. The lectures are introductory and avoid the use of complicated mathematics. The other selected contributions are also geared to fourth year undergraduate and graduate students. The fluid dynamics applications include multiphase flow, convection, diffusion, heat transfer, rheology, granular material, viscous flow, porous media flow, geophysics and astrophysics. The material contained in the book includes recent advances in experimental and theoretical fluid dynamics and will be of great use to those involved in either teaching and/or research.

**Contents**

Invited Lectures; Geophysics and Astrophysics; Multiphase Flow and Porous Media; Convection, Diffusion and Heat Transfer; Rheology and Granular Media; Viscous Flow; Gallery of Fluids.

**Fields of interest**

Environment (general); Geophysics and Environmental Physics

**Target groups**

Polyfluorinated Chemicals and Transformation Products

Due to their unparalleled effectiveness and efficiency, polyfluorinated chemicals (PFCs) have become essential in numerous technical applications. However, many PFCs brought to market show limited biodegradability, and their environmental persistence combined with toxic and bioaccumulative potential have become a matter of concern in some instances. This volume highlights the synthesis of PFCs, focusing on substances with improved application and environmental properties, which are a challenge for synthetic chemists. Further, modern mass spectrometric techniques for the detection and identification of biotransformation products of PFCs are described. The sorption and leaching behavior of PFC in soil is also addressed in order to predict their fate in the environment. Several contributions discuss the monitoring of PFCs in European surface, ground and drinking waters, treatment options for PFC removal from drinking water, occurrence in food, and the human biomonitoring of PFCs.

Features

### Environmental Sensing

**Analytical Techniques for Earth Observation**

Remote sensing has witnessed a renaissance as new sensor systems, data collection capabilities and image processing methodologies have expanded the technological capabilities of this science into new and important applications areas. Perhaps nowhere has this trend been more evident than in the study of earth environments. Within this broad application area remote sensing has proven to be an invaluable asset supporting timely data gathering at a range of synoptic scales, facilitating the mapping of complex landscapes and promoting the analysis of environmental process. Yet remote sensing’s contribution to the study of human/environmental interaction is scattered throughout a rich and diverse literature spanning the social and physical sciences, which frustrates access to, and the sharing of the knowledge gained through, these recent advances, and inhibits the operational use of these methods and techniques in day to day environmental practice, a recognized gap that reduces the effectiveness of [...]  

**Features**  
Remote sensing is a mature technology that has been largely under-utilized in a world increasing focus on Geographic Information Systems. With the goal of encouraging a wider appreciation of what this science can achieve, Environmental Sensing: Analytical Techniques for Earth Observation introduces the scope and method of remote sensing within the context of environmental analysis and assessment. [...]

### Environmental Protection Strategies for Sustainable Development

**The environment of our planet is degrading at an alarming rate because of non-sustainable urbanization, industrialization and agriculture.**  
Unsustainable trends in relation to climate change and energy use, threats to public health, poverty and social exclusion, demographic pressure and ageing, management of natural resources, biodiversity loss, land use and transport still persist and new challenges are arising. Since these negative trends bring about a sense of urgency, short term action is required, whilst maintaining a longer term perspective. The main challenge is to gradually change our current unsustainable consumption and production patterns and the nonintegrated approach to policy-making. This book covers the broad area including potential of rhizospheric microorganisms in the sustainable plant development in anthropogenic polluted soils, bioremediation of pesticides from soil and waste water, toxic metals from soil, biological treatment of pulp and paper industry wastewater, sustainable[...]

### Drilling Down

**The Gulf Oil Debacle and Our Energy Dilemma**

For more than a century, oil has been the engine of growth for a society that delivers an unprecedented standard of living to many. We now take for granted that economic growth is good, necessary, and even inevitable, but also feel a sense of unease about the simultaneous growth of complexity in the processes and institutions that generate and manage that growth. As societies grow more complex through the bounty of cheap energy, they also confront problems that seem to increase in number and severity. In this era of fossil fuels, cheap energy and increasing complexity have been in a mutually-reinforcing spiral. The more energy we have and the more problems our societies confront, the more we grow complex and require still more energy. How did our demand for energy, our technological prowess, the resulting need for complex problem solving, and the end of easy oil conspire to make the Deepwater Horizon oil spill increasingly likely, if not inevitable? This book explains the real causal factors leading[...]

Reviews of Environmental Contamination and Toxicology

Reviews of Environmental Contamination and Toxicology attempts to provide concise, critical reviews of timely advances, philosophy and significant areas of accomplished or needed endeavor in the total field of xenobiotics, in any segment of the environment, as well as toxicological implications.

Features
- CONTENTS
  - Foreword
  - Preface
  - Evaluating Risks of Acquired Clinical Vulnerability Among Subjects Exposed to E-waste
  - Aerospace Toxicology Overview: Aerial Application and Cabin Air Quality
  - Land Application of Sewage Sludge: Physico-chemical and Microbial Response
  - The Accumulation of Heavy Metals in Selected Medicinal Plants
  - Effects of Organic Herbicides on Phototrophic Microbial Communities in Freshwater Ecosystems
  - Essential Roles and Hazardous Effects of Nickel in Plants

Modeling the Dynamics and Consequences of Land System Change

"Modeling the Dynamics and Consequences of Land System Change" introduces an innovative three-tier architecture approach for modeling the dynamics and consequences of land system change. It also describes the principle, modules and the applications of the three-tier architecture model in detail. The approach holds strong potential for accurate predictions of the land use structure at the regional level, simulating the land use pattern at pixel level and evaluating the consequences of land system change. The simulation results can be used for the planning of land use, urban development, regional development, environmental protection, and also serve as valuable information for decision making concerning land management and optimal utilization of land resources. The book is intended for the researchers and professionals in land use or land systems, regional environmental change, ecological conservation, as well as the land resource administrative agencies and environmental protection agencies.

Features
- "Modeling the Dynamics and Consequences of Land System Change" introduces an innovative three-tier architecture approach for modeling the dynamics and consequences of land system change.
- It also describes the principle, modules and the applications of the three-tier architecture model in detail.
- The approach holds strong potential for accurate predictions of the land use structure at the regional level.

Contents
- Land System and Land System Change
- Modeling Frameworks for the Dynamics and Consequence of Land System Change
- Three-tier Architecture Model for Simulating the Land System Change
- Predicting the Land Use Structure at Regional Level Using CGELUC
- Simulating the Land Use Pattern at Pixel Level Using DLS
- Evaluating the Consequences of Land System Change Using ESAP
- Modeling the Dynamics of Land System in the Agriculture-Pasture Transition Zone of China
- Estimating the Impacts of the Land System Change on the Agricultural Production at the North China Plain

Geographie

Physische Geographie und Humangeographie

Features

Das Studien- und Schulbuch Geographie bietet Studierenden, Schülerinnen und Schülern die Möglichkeit, die „Welt“ und ihre Zukunftsperspektiven aus einer breiteren Perspektive verstehen zu lernen, als viele der rein natur- oder kulturwissenschaftlichen Nachbardisziplinen sie vermitteln. Die Geographie setzt sich mit Fragen zur Umwelt und zur Gesellschaft im weitesten Sinne auseinander. In dem von Hans [...]
The Three Paths of Justice
Court Proceedings, Arbitration, and Mediation in England

This book presents a concise account of the English system of civil litigation, covering court proceedings in England and Wales. It is an original and important study of a system which is the historical root of the US litigation system. The volume offers a comprehensive and properly balanced account of the entire range of dispute resolution techniques. As the first book on this subject to be published in the USA, it enables American lawyers to gain an overview of the main institutions of English Civil Procedure, including mediation and arbitration. It will render the English system of civil justice accessible to law students in the US, practitioners of law, professors, judges, and policy-makers.

Outer Space in Society, Politics and Law

Spacelift is a rational undertaking, yet full of emotions. It is a dream of mankind and a multi-billion industry likewise. It is subject to a distinct branch of law – and moreover part of modern pop culture. In short: spacelift is fascinating. “Outer Space in society, politics and law” is an inter-disciplinary approach to the understanding of modern space law. Technical, cultural and historical aspects lay the foundation for a sound comprehension why space law norms have been established and what they mean in practice. The reader will realize the impact space and spacelift have on society – from Stonehenge to climate change. A new approach to presenting space law: comprehensive and illustrative. “We live in a society absolutely dependent on science and technology and yet have cleverly arranged things so that almost no one understands science and technology. That’s a clear prescription for disaster.” Carl Sagan

The Europeanisation of International Family Law

Choice of law determines which national legal system applies to an international case. Currently many choice of law rules in the field of family law are regulated by national law. However, these national rules of the EU Member States are more and more displaced by common European rules. This book describes the changes brought by the Europeanisation of the choice of law on divorce. From the conclusions drawn in the field of divorce the concluding chapter discusses the changes of Europeanisation of international family law in a broader perspective.

Features
International family law is an area that is predominantly regulated by national law. Currently the national choice of law rules of the EU Member States are more and more displaced by common European rules, which will entail considerable changes. In this book, the nature and reasons of the changes brought about by the transition from a national to a supranational choice of law approach are discussed in […]

Contents
Introduction. - The Dutch choice of law rules on divorce. - The Dutch choice of law rules on the termination of registered partnerships. - The Europeanisation of international family law: the EU legislature’s competence. - The proposed European choice of law rules on divorce. - The failure of the establishment of a common European choice of law on divorce. - The Dutch and the European choice of law rules on divorce compared. - A unified system of international family law in the European Union: which way forward?

Integration by Cooperation
A Constructivist Social Theory and a Theory of the State and the Law

The last thirty years were lost years. The neoliberal revolution and its economic absolutism have led to injustice and to a loss of freedom. Every realm of life has become subordinated to economic criteria as the competitive homo oeconomicus has been made the exclusive concept of humankind. This book proposes an alternative that’s based on cooperation. To overcome the supremacy of the economy, with its isolated individuals who lack solidarity, a new social theory is developed, one that’s grounded on an interactive understanding of freedom and enriched by solidarity, responsibility, and justice. It is a constructivist approach that makes us responsible for the “reality” we live in and invites us to rethink the way individual and collective identities are created in order to prevent violence in its direct, structural, or cultural form. Using historical and current examples, the thesis discusses the advantages of a cooperative social structure and the integrative roles the law and the state can play.

The Need for an Integrated Regulatory Regime for Aviation and Space

ICAO for Space?

In the new space age after the end of the Cold War, orbit and frequency allocations, traffic control, safety, and a number of support services such as space weather forecast and orbital debris monitoring need to be coordinated transparently and effectively by clear rules at an international level. The establishment of an international civil space regulatory framework is the central theme of this book, in particular, the possible extension to space of the international regulatory framework model adopted for aviation more than 60 years ago with the establishment of the International Civil Aviation Organization (ICAO). The book also highlights the increased reliance of aviation safety on space-based navigation and communication systems, the increasing space systems traffic through the international airspace under the jurisdiction of the ICAO, and the emerging hybrid systems such as aero-spacecraft and space planes, to advocate the practical benefits of directly expanding the ICAO Convention domain.[...]

Public Services and the European Union

Healthcare, Health Insurance and Education Services

Politically sensitive and economically important, welfare services such as health care, health insurance and education have opened up a heated debate in the EU. The application of EU law to welfare services raises discontent from the part of the Member States who perceive their systems to be under threat. Resisting to the application of the EU law is sometimes seen as part of protecting those values. This book suggests that this resistance is largely unjustified. EU law is not damaging to welfare systems, but it provides adequate balancing mechanisms to ensure that all interests are protected. The approach taken in analysing the impact of EU law on welfare services is to look at the negative integration process and answer the questions related to the extent to which EU law applies to welfare services and the kinds of safeguards the Court offers for these services. The proportionality principle distinguishes itself as the central element in balancing national and Community interests. Being part of [...]
Poker und Pokerspielsalons in der Glücksspielgesetzgebung

Dokumentation und Analyse der Glücksspielgesetzgebung mit kritischen Anmerkungen aus verfassungsrechter Sicht

Diese Studie hat zum Ziel, Sinn und Zweck der vom Gesetzgeber beschlossenen Gesetzesänderungen des GSpG 1989 aus dem Jahr 2010 aufzudecken, ihre rechtstaatliche Eignung und Tragweite auszuloten und auf ihre formelle und materielle Vereinbarkeit mit den Grundprinzipien der Verfassung zu überprüfen. Im Hinblick auf die Eigenarten der Glücksspiele, gemäß den verfassungsrechtlichen Bestimmungsgründen für das Finanzmonopol des Staates, und im Hinblick auf die ordnungs- und sicherheitspolizeilichen Anforderungen des Staates und der EU wird auch noch die Frage geprüft, ob für die Unterwerfung der traditionellen Kartenspiele des Poker unter das wettbewerbsbedingte Konzessionsystem des Finanzmonopols des Staates unmittelbar kraft Gesetzes, und für die damit angestrebte Beendigung der bisher geltenden Regelungen für freie Pokerspiele in frei gewerblichen Unternehmen von Kartenspielsalons (Pokerspielsalons) gemäß den Bestimmungsgründen der Kompetenzvorschriften für die Angelegenheiten des Gewerbes und für das [...] Features

These studies comprise a vast literature currently scattered in numerous, often obscure, journals and books. The Pollination Biology of North American Orchids brings together, for the first time, a comprehensive treatment of this information for all native and introduced North American orchids found north of Florida and Mexico. It provides detailed information on genetic compatibility, breeding systems, pollinators, pollination mechanisms, fruiting success, and limiting factors for each species. Distribution, habitat, and floral morphology are also summarized. In addition, detailed line drawings emphasize orchid reproductive organs and their adaptation to known pollinators. This, the second of two volumes, treats the subfamily Orchidoideae with the tribe Cranichideae. This is followed by examination of the seven North American tribes of subfamily Epidendroideae and the single North American tribe off [...] Features

Frontiers in Sensing

From Biology to Engineering

Biological sensory systems, fine-tuned to their specific tasks with remarkable perfection, have an enormous potential for technical, industrial, and medical applications. This applies to sensors specialized for a wide range of energy forms such as optical, mechanical, electrical, and magnetic, to name just a few. This book brings together first-hand knowledge from the frontiers of different fields of research in sensing. It aims to promote the interaction between biologists, engineers, physicists, and mathematicians and to pave the way for innovative lines of research and cross-disciplinary approaches. The topics presented cover a broad spectrum ranging from energy transformation and transduction processes in animal sensing systems to the fabrication and application of bio-inspired synthetic sensor arrays. The various contributions are linked by the similarity of what sensing has to accomplish in both biology and engineering.

Innovations as Key to the Green Revolution in Africa

Exploring the Scientific Facts

Africa can achieve self sufficiency in food production through adoption of innovations in the agriculture sector. Numerous soil fertility and crop production technologies have been generated through research, however, wide adoption has been low. African farmers need better technologies, more sustainable practices, and fertilizers to improve and sustain their crop productivity and to prevent further degradation of agricultural lands. The agricultural sector also needs to be supported by functional institutions and policies that will be able to respond to emerging challenges of globalization and climate change.

Features

Africa urgently needs a uniquely African Green Revolution - a revolution that is long overdue, a revolution that will help the continent in its quest for dignity and peace. Mr. Koit Annan, Former Secretary General of the United Nations (UN), currently the Board Chair of Alliance for a Green Revolution in Africa [...] Online orders shipping within 2-3 days.

Tissue Engineering in Regenerative Medicine

Over the past decade, significant advances in the fields of stem cell biology, bioengineering, and animal models have converged on the discipline of regenerative medicine. Significant progress has been made leading from pre-clinical studies through phase 3 clinical trials for some therapies. This volume provides a state-of-the-art report on tissue engineering toward the goals of tissue and organ restoration and regeneration. Examples from different organ systems illustrate progress with growth factors to assist in tissue remodeling; the capacity of stem cells for restoring damaged tissues; novel synthetic biomaterials to facilitate cell therapy; transplantable tissue patches that preserve three-dimensional structure; synthetic organs generated in culture; aspects of the immune response to transplanted cells and materials; and suitable animal models for non-human clinical trials. The chapters of this book are organized into six sections: Stem Cells, Biomaterials and the Extracellular Environment, [...] Online orders shipping within 3 to 5 business days.

Aralum - a Man-Made Desert
The Desiccated Floor of the Aral Sea (Central Asia)

Having been the fourth largest lake on the globe roughly 50 years ago, today the Aral Sea no longer exists. Human activities caused its desiccation and the formation of a huge new desert, the Aralkum, which can be regarded as one of the greatest ecological catastrophes and - at the same time - the largest primary succession experiment of mankind. This volume brings together the results of international and interdisciplinary long-term studies on the new desert ecosystem and is divided into four main sections. The first section provides an overview of the physical characteristics of the area and covers geological, pedological, geomorphological and climatological aspects and their dynamics, especially dust-storm dynamics. The second focuses on the biotic aspects and highlights the spatial and temporal patterns of the flora and fauna. In the third section studies and projects aiming to combat desertification by phytomelioration and to develop strategies for the conservation of biodiversity are[...]

Functional Genomics and Evolution of Photosynthetic Systems

New possibilities have been brought about by the stunning number of genomic sequences becoming available for photosynthetic organisms. This new world of whole genome sequence data spans the phyla from photosynthetic microbes to algae to higher plants. These whole genome projects are intrinsically interesting, but also involve the variety of other molecular sequence databases including the recent `meta-genomic' sequencing efforts that analyze entire communities of organisms. As impressive as they are, are obviously only the beginning of the effort to decipher the biological meaning encoded within them. This book aims to highlight progress in this direction. This book aims toward a genome-level understanding of the structure, function, and evolution of photosynthetic systems and the advantages accrued from the availability of phyletically diverse sets of gene sequences for the major components of the photosynthetic apparatus. While not meant to be fully comprehensive in terms of the topics, [...]

Network Biology

Methods and Applications

While extremely large datasets describing gene sequences, mRNA transcripts, protein abundance, and metabolite concentrations are increasingly commonplace, these represent only starting 'parts lists' that are usually insufficient to unlock mechanistic insights on their own right. Fortunately, as Network Biology: Methods and Applications examines, concepts emerging from the study of biological entities such as networks (e.g. functional interactions linking genes, proteins, metabolites, etc.) suggest that order rather than chaos prevails, with such principles as modular and hierarchical organization, reactive information-driven causal-response behaviours, systems robustness, co-evolution, and self-organization guiding the way. This volume presents detailed, practical descriptions of the experimental and computational approaches currently prevalent in network biology as written by practiced experts in the field. Written in the highly successful Methods in Molecular Biology™ series format, relevant [..]

Molecular Chaperones

Methods and Protocols

The proteome consists of a complex mixture of proteins each of which need to be folded correctly in order to function for the health of the organism, and many of these proteins require molecular chaperones to reach the correct conformation and, in some cases, to remain in a folded form. In Molecular Chaperones: Methods and Protocols, expert researchers address a wide variety of approaches to the study these mechanisms, featuring the workings of heat shock proteins and heat shock transcription factors, in vitro and in vivo. Written in the highly successful Methods in Molecular Biology™ series format, chapters features introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, Molecular Chaperones: Methods and Protocols serves as an ideal guide for all scientists who wish to pursue this vital biological action and its impact on [..]

Principles of Terrestrial Ecosystem Ecology

Humans have directly modified half of the ice-free terrestrial surface and use 40% of terrestrial production. We are causing the sixth major extinction event in the history of life on Earth. With the Earth’s climate, flora, and fauna changing rapidly, there is a pressing need to understand terrestrial ecosystem processes and their sensitivity to environmental and biotic changes. This book offers a framework to do just that. Ecosystem ecology regards living organisms, including people, and the elements of their environment as components of a single integrated system. The comprehensive coverage in this textbook examines the central processes at work in terrestrial ecosystems, including their freshwater components. It traces the flow of energy, water, carbon, and nutrients from their abiotic origins to their cycles through plants, animals, and decomposer organisms. As well as detailing the processes themselves, the book goes further to integrate them at various scales of magnitude—those of the...[ ]

Electrophoretic Deposition of Nanomaterials

This book provides a comprehensive overview of contemporary basic research, emerging technology, and commercial and industrial applications associated with the electrophoretic deposition of nanomaterials. This presentation of the subject includes an historical survey, as well as discussions of the underlying theory of electrophoresis, dielectrophoresis, and the colloidal deposition of materials. This is followed by an assessment of the experimental equipment and procedures for electrophoretic and dielelectrophoretic aggregation, manipulation, and deposition of nanoparticles, nanotubes, and other nanomaterials. Additional chapters explore the specific science and technology of electrophoretic film formation, using widely studied and application-driven nanomaterials, such as carbon nanotubes, luminescent nanocrystals, and nano-ceramics. The concluding chapters explore industrial applications and procedures associated with electrophoretic deposition of nanomaterials.

Features

Metal Toxicity in Plants: Perception, Signaling and Remedia

Heavy metal accumulation in soil and water from natural sources or anthropogenic activities has produced severe environmental contamination in some parts of the world due to the persistence of metals in the environment by their accumulation throughout the food chain. The purpose of this book is to present the most recent advances in this field, mainly concerning the uptake and translocation of heavy metals in plants, mechanisms of toxicity, perception of metal and regulation of cell response under metal stress. Another key feature of this book is to relate the studies on signaling and remediation processes in recent years, which have taken advantage of recent technological advances including ‘omic’ approaches. In recent years transcriptomic, proteomic and metabolomic studies have become very important tools for analyzing both the dynamics of changes in gene expression and the profiles of protein and metabolites under heavy metal stress. This information is also very useful for plotting the complex[…]

Tropical and Sub-Tropical Reservoir Limnology in China

Theory and practice

Reservoirs are specific aquatic ecosystems and have complex behaviors of both natural lakes and rivers, regulated significantly by their functions such as flood controlling, hydropower generation, irrigation and fishery. This volume offers a general description of reservoir limnology in tropical and subtropical China. It functions as a window opening to all the aquatic scientists with a main focus on reservoirs in southern China and at the same time also covering several important, large reservoirs such as the Three Gorge Reservoir and Danjiangkou Reservoir. Topics discussed are zooplankton, phytoplankton and zoobenthos communities, cyanobacteria, nutrient budget, sediments, biogeochemical cycling of mercury, fishery and eutrophication.

Himalayan Biodiversity in the Changing World

This book presents some results on selected taxa in the Himalayan region (mainly Nepal), pinpoints the threats to their survival and suggests ways how to avoid their extinction. Most chapters are based on graduate research projects - relatively long-term field studies. The data presented here can be a good source of updated information on the subject and will prove to be a very useful reference in future studies of Himalayan biodiversity. They also tend to pinpoint the existing gaps in our knowledge of this region. All the chapters are based on recent trends of biodiversity and conservation vision, so the book can be a potential alternative to the existing relatively older books with outdated vision and information. Its main goal, however, is to disseminate the information about biodiversity conservation problems in the Himalayan region among the people in the developed world.

Features

Wild Crop Relatives: Genomic and Breeding Resources

C. Kole, Clemson University, Clemson SC, USA (Ed.)

Plantation and Ornamental Crops

Wild crop relatives are now playing a significant part in the elucidation and improvement of the genomes of their cultivated counterparts. This work includes comprehensive examinations of the status, origin, distribution, morphology, cytology, genetic diversity and available genetic and genomic resources of numerous wild crop relatives, as well as of their evolution and phylogenetic relationship. Further topics include their role as model plants, genetic erosion and conservation efforts, and their domestication for the purposes of bioenergy, phytomedicines, nutraceuticals and phytoremediation. Wild Crop Relatives: Genomic and Breeding Resources comprises 10 volumes on Cereals, Millets and Grasses; Oilseeds, Legume Crops and Forages; Vegetables, Temperate Fruits, Tropical and Subtropical Fruits, Industrial Crops, Plantation and Ornamental Crops, and Forest Trees. It contains 125 chapters written by nearly 400 well-known authors from about 40 countries.

Noise-Induced Hearing Loss

C.G. Le Prell, University of Florida, Gainesville, FL, USA; D. Henderson, State University of New York at Buffalo, NY, USA; R.R. Fay, Loyola University of Chicago, IL, USA; A.N. Popper, University of Maryland, College Park, MD, USA (Eds.)

Exposure to loud noise continues to be the largest cause of hearing loss in the adult population. The problem of NIHL impacts a number of disciplines. US standards for permissible noise exposure were originally published in 1968 and remain largely unchanged today. Indeed, permissible noise exposure for US personnel is significantly greater than that allowed in numerous other countries, including for example, Canada, China, Brazil, Mexico, and the European Union. However, there have been a number of discoveries and advances that have increased our understanding of the mechanisms of NIHL. These advances have the potential to impact how NIHL can be prevented and how our noise standards can be made more appropriate.

Recent Advances in Entomological Research

From Molecular Biology to Pest Management

In recent years the field of entomology, due in part to the penetration of other disciplines, has made rapid progress. “Recent Advances in Entomological Research: From Molecular Biology to Pest Management” includes 25 chapters contributed by more than 40 distinguished entomologists and introduces the latest progress in entomology, from molecular biology, insect-plant interactions and insecticide toxicology, to emerging technologies in pest management. Not only is the book interesting and informative, but it provides useful, innovative research advances and will serve as a valuable resource for entomologists, zoologists, botanists and other researchers in the field of plant protection. Tong-Xian Liu is a professor of entomology at the College of Plant Protection, Northwest A & F University, China. Le Kang is a professor of entomology at the Institute of Zoology, Chinese Academy of Sciences, China.

Microbial Stress Tolerance for Biofuels

Systems Biology

The development of sustainable and renewable biofuels is attracting growing interest. It is vital to develop robust microbial strains for biocatalysts that are able to function under multiple stress conditions. This Microbiology Monograph provides an overview of methods for studying microbial stress tolerance for biofuels applications using a systems biology approach. Topics covered range from mechanisms to methodology for yeast and bacteria, including the genomics of yeast tolerance and detoxification; genetics and regulation of glycerol and trehalose metabolism; programmed cell death; high gravity fermentations; ethanol tolerance; improving biomass sugar utilization by engineered Saccharomyces; the genomics on tolerance of Zymomonas mobilis; microbial solvent tolerance; control of stress tolerance in bacterial host organisms; metabolomics for ethanologenic yeast; automated proteomics work cell systems for strain improvement; and unification of gene expression data for comparable analyses under[].

Cotton, Water, Salts and Soums

Economic and Ecological Restructuring in Khorezm, Uzbekistan

This book summarizes a long-term research project addressing land and water use in the irrigated areas of the Aral Sea basin. In an interdisciplinary approach, natural and human sciences are combined to elucidate challenges of economic transition that affect the use of land, water and biological resources, ecological sustainability, economic efficiency and the livelihoods of the local population. The research focuses on Khorezm, a region in Uzbekistan, located on the Amudarya river, in the heart of Central Asia. A series of chapters describes the biophysical environment and the aspects of society and institutions that shape land and water use. The book discusses options and tools to improve land and water management, and to reform the economic system management, based on agronomic, hydrological, economic and social studies and modeling. The insights are not only important for Uzbekistan, but for all countries in transitions and irrigated dryland areas elsewhere.

Features

This book summarizes results from a long-term research project addressing land and water use in irrigated areas of the Aral Sea basin. In an interdisciplinary approach, natural and human sciences are combined to elucidate challenges of economic transition that affect the use of land, water and biological resources, ecological sustainability, economic efficiency and the livelihoods of the local population. [...]

Contents

1. INTRODUCTION.- Preface.- 1.1 Cotton, water, salt and Soums – research and capacity building for decision-making in Khorezm, Uzbekistan.- 2. THE BACKGROUND (PHYSICAL SETTING).- 2.1 Agro-meteorological trends of recent climate development in Khorezm.- 2.2 Soils and soil ecology in Khorezm.- 2.3 Spatial distribution of cotton yield and its relationship to environmental, irrigation infrastructure and water management factors on a regional scale in Khorezm, Uzbekistan.- 2.4 Water management in Khorezm: current situation and options for improvement (hydrological perspective).- 3. THE SYSTEM[...]

The Nucleolus

Within the past two decades, extraordinary new functions for the nucleolus have begun to appear, giving the field a new vitality and generating renewed excitement and interest. These new discoveries include both newly-discovered functions and aspects of its conventional role. The Nucleolus is divided into three parts: nucleolar structure and organization, the role of the nucleolus in ribosome biogenesis, and novel functions of the nucleolus.

Features
Within the past two decades, extraordinary new functions for the nucleolus have begun to appear, giving the field a new vitality and generating renewed excitement and interest. These new discoveries include not only the novel functions of the nucleolus, but also numerous breakthroughs on its conventional role. Consequently, a large part of this volume is devoted to traditional functions of the nucleolus.

Contents
Nucleolar Structure and Organization. Structural organization of the nucleolus as a consequence of the dynamics of ribosome biogenesis. The dynamic proteome of the nucleolus. The Structure of rDNA Chromatin. The epigenetics of the nucleolus: structure and function of active and silent ribosomal RNA genes. UBF, an Essential Player in Maintenance of Active NORs and nucleolar formation. Role of the Nucleolus in Ribosome Biogenesis. The RNA Polymerase I Transcription Machinery. Small Ribonucleoproteins in Ribosome Biogenesis. Crosstalk between ribosome synthesis and cell cycle progression and its...

**Signaling and Communication in Plant Symbiosis**

A multiplicity of biotrophic micro-organisms interact with plants in nature, forming symbiotic relationships that range from mutualism to antagonism. Microorganisms that have adopted biotrophy as a lifestyle are able to colonize the plant and often to cross the plant cell boundaries by forming intracellular structures that are the site of nutrient uptake/exchange. To establish themselves within plant tissues, both mutualistic and pathogenic biotrophs need to overcome the plant defense response through an exchange of molecular signals. Our knowledge of the nature of these signals and their function in the interaction has rapidly increased over the last few years. This volume focuses on the genetic, molecular and cellular components involved in the communication between partners of well-known symbioses, but also reports on the advances for less studied systems.

**Features**

- A multiplicity of biotrophic micro-organisms interact with plants in nature, forming symbiotic relationships that range from mutualism to antagonism. Microorganisms that have adopted biotrophy as a lifestyle are able to colonize the plant and often to cross the plant cell boundaries by forming intracellular structures that are the site of nutrient uptake/exchange. To establish themselves within plant tissue. [...]  

**Contents**

- The role of diffusible signals in the establishment of rhizobial and mycorrhizal symbioses. - Infection of Lotus japonicus roots by Mesorhizobium loti. - Signalling and re-structuring of the plant cell architecture in AM symbiosis. - Common pathways in legume and arbuscular mycorrhizal symbioses. - Signalling and communication in the actinorhizal symbiosis. - Signalling in the cyanobacterial-plant symbiosis. - Signalling in the ectomycorrhizal symbiosis. - Signalling in the Epichloë festucae – perennial ryegrass mutualistic symbiotic interaction. - Plant infection by biotrophic fungal and oomycete [...].

**Single Molecule Analysis**

**Methods and Protocols**

Life scientists believe that life is driven, directed, and shaped by biomolecules working on their own or in concert. It is only in the last few decades that technological breakthroughs in sensitive fluorescence microscopy and single-molecule manipulation techniques have made it possible to observe and manipulate single biomolecules and measure their individual properties. The methodologies presented in this book are being applied more and more to the study of biologically relevant molecules, such as DNA, RNA, binding proteins, and motor proteins, and are becoming commonplace in molecular biophysics, biochemistry, and molecular and cell biology. The aim of Single Molecule Techniques: Methods and Protocols is to provide a broad overview of single-molecule approaches applied to biomolecules on the basis of clear and concise protocols, including a solid introduction to the most widely used single-molecule techniques, such as optical tweezers, single-molecule [...]

Human Cell Transformation

Role of Stem Cells and the Microenvironment

Rhim and Kremer’s state-of-the-art volume on Human Cell Transformation: Role of Stem Cells and the Microenvironment highlights the latest findings on the current state of human cell transformation model systems and provides the insight into the molecular and cellular changes involved in the conversion of normal cells to neoplastic cells. Chapters cover all recently developed novel human cell models. In addition, the rapidly growing field of knowledge regarding not only stem cells in cancer progression, but also the role of the microenvironmets in human carcinogenesis are discussed. A wealth of topics is presented including: - Derivation of epithelial, fibroblastic, and hematopoietic in vitro model systems - Oncogenes - Tumor suppressor genes - Viral transformation - In vitro model systems for viral, chemical and radiation carcinogenesis - Cell aging - The multistep nature of human carcinogenesis - The role of stem cells and the...[...

Adhesive Interactions in Normal and Transformed Cells

Adhesive Interactions in Normal and Transformed Cells describes the basic mechanisms of the ability of tissue cells to attach to each other and to the extracellular matrix. These adhesive interactions are pivotal regulators of main cellular functions, such as proliferation, survival and migration. The adhesive interactions are involved in embryonic development, regeneration, and also in inflammation and degeneration processes, which are at the basis of many diseases. Serious alterations in cell adhesion caused by the oncogenic transformation play a key role in cancer invasion and metastasis. This volume provides comprehensive information about structural, mechanistic and signaling aspects of adhesive interactions in both normal and cancer cells in comparison. Integration of such aspects of the adhesive process as structure, relation to cell systems of receptors and cytoskeleton, function, signaling pathways, and the alterations in tumor cells constitutes the strongest point of this work. The results...[...

Humans on Earth
From Origins to Possible Futures

This is a wide-ranging and persuasive book written by an undisputed expert. Beginning with a broad history of the Universe, Earth, Life, and Man, it considers the origins and rise of science and technology, before moving on to discuss the present state of the world and its/our possible futures. Humans on Earth then addresses the main challenges for social and economic development in the 21st century in the context of global change. It presents a detailed but non-technical analysis of questions relating to climate change, our dependence on fossil fuels, deforestation, loss of biodiversity, desertification, and air, water, soil, and ocean pollution, as well as problems related to overpopulation, poverty, social and economic inequalities, and conflict potential. The three main, but largely mutually exclusive, discourses on human development and the environment are described and discussed. The main emphasis is on the risks and uncertainties of the short-term future – the next 50 to 100 years – with [...] Features

Detoxification of Heavy Metals

Heavy metals are severe environmental pollutants, and many of them are toxic even at very low concentrations. With industrial development, soil pollution with heavy metal elements has dramatically increased. The uptake of heavy metals via plants that are exposed to contaminated soils is a risk for human health and a major hazard for the ecosystem as a whole, including soil microorganisms. On the other hand, plants may be used in the decontamination of soils. The topics presented in this book include: sources of heavy metals contaminant in soils; plant species that can grow on contaminated soils; the phytoremediation of contaminated soils; tolerance, accumulation and detoxification mechanisms of zinc, copper, arsenic, cadmium and vanadium in plants; the critical role of sulfur metabolism in heavy metal tolerance; the role of aquatic macrophytes, plant growth-promoting bacteria, sugar crops and earthworms in detoxification; and heavy metal stabilization by promoting zeolite synthesis in soils.

Features

Heavy metals are severe environmental pollutants, and many of them are toxic even at very low concentrations. Integrin and Cell Adhesion Molecules

Methods and Protocols

Integrins play pivotal roles not only across a wide range of physiological processes including tissue morphogenesis, immune responses, wound healing, and regulation of cell growth and differentiation, but also in numerous pathological phenomena such as autoimmunity, thrombosis, and cancer metastasis/progression. Therefore, investigations on integrins often demand multi-disciplinary approaches, making researchers long for a handy collection of comprehensive and practical protocols that detail experimental methods for studying integrin and related cell adhesion molecule functionality. Integrin and Cell Adhesion Molecules: Methods and Protocols aims to provide readers not only with basic protocols in studying integrin functions, but also with summaries on those state-of-the-art technologies that have been utilized for understanding integrin functionality at the cellular, molecular, structural, and organismal levels. Divided into six convenient sections, this detailed volume covers basic protocols for [...] Features

Stress Ecology

Environmental Stress as Ecological Driving Force and Key Player in Evolution

Not all stress is stressful; instead, it appears that stress in the environment, below the mutation threshold, is essential for many subtle manifestations of population structures and biodiversity, and has played a substantial role in the evolution of life. Intrigued by the behavior of laboratory animals that contradicted our current understanding of stress, the author and his group studied the beneficial effects of stress on animals and plants. The seemingly “crazy” animals demonstrated that several stress paradigms are outdated and have to be reconsidered. The book describes the general stress responses in microorganisms, plants, and animals to abiotic and biotic, to natural and anthropogenic stressors. These stress responses include the activation of oxygen, the biotransformation system, the stress proteins, and the metal-binding proteins. The potential of stress response lies in the transcription of genes, whereas the actual response is manifested by proteins and metabolites. Yet, not all...

Rainfed Farming Systems

While a good grasp of the many separate aspects of agriculture is important, it is equally essential for all those involved in agriculture to understand the functioning of the farming system as a whole and how it can be best managed. It is necessary to re-assess and understand rain-fed farming systems around the world and to find ways to improve the selection, design and operation of such systems for long term productivity, profitability and sustainability. The components of the system must operate together efficiently; yet many of the relationships and interactions are not clearly understood. Appreciation of these matters and how they are affected by external influences or inputs is important for decision making and for achieving desirable outcomes for the farm as a whole. This book analyses common rain-fed farming systems and defines the principles and practices important to their effective functioning and management.

Features

While agriculturists need a good grasp of the many separate aspects of agriculture, it is essential that they also understand the functioning of farming systems as a whole and how they can be best managed. This book takes such a combined approach. It analyses common rainfed farming systems around the world and discusses both their strengths and ways of improving their operation and management for long term...[–]

Permeability Barrier

The significant biological subject, the permeability barrier, is incredibly diverse and vital for a vast assortment of crucial functions in the body. The Permeability Barrier: Methods and Protocols serves as an ideal guide for all scientists seeking to further our understanding of this vital area of research.

Features

The significant biological subject, the permeability barrier, is incredibly diverse and vital for a vast assortment of crucial functions in the body. The Permeability Barrier: Methods and Protocols, a variety of experienced researchers contribute techniques to study this complex system in its many forms. Written in the highly successful Methods in Molecular Biology™ series format, chapters include brief introductions to their respective topics, detailed lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and key tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, Permeability Barrier: Methods and Protocols serves as an ideal guide for all scientists seeking to further our understanding of this vital area of research.

Contents

Computational Modeling of the Skin Barrier.- In Vitro Human Skin Segmentation and Drug Concentration-Skin Depth Profiles.- Transcriptional Regulation of Epidermal Barrier Formation.- Epidermal Permeability Barrier (EPB) Measurement in Mammalian Skin.- Assessment of Permeability Barriers to Macromolecules in the Rodent Endometrium at the Onset of Implantation.- Assessment of Intestinal Permeability in (Premature) Neonates by Sugar Absorption Tests.- Analysis of Epithelial Cell Shedding and Gaps in the Intestinal Epithelium.- Studying Permeability in a Commonly Used Epithelial Cell Line...[–]

Human Embryonic and Induced Pluripotent Stem Cells

Lineage-Specific Differentiation Protocols

Because of the huge potential of human embryonic stem (hES) cells, especially the newly developed human induced pluripotent stem (hiPS) cells, in disease treatment and life quality improvement, enormous efforts have been made to develop new methodologies to translate lab discoveries in stem cell research into bedside clinical technologies. In Human Embryonic and Induced Pluripotent Stem Cells: Lineage-Specific Differentiation Protocols, experts in the field present a comprehensive collection of protocols designed for labs around the world. The topics covered in this detailed volume include techniques used for maintenance of hES and IPS cells in either small or large scale, techniques for directing hES and IPS cell lineage specification, techniques for enhancing the maturity of differentiated hES and IPS cells within three-dimensional scaffolds, techniques for reprogramming adult cells into IPS cells, techniques for generating patient-specific IPS cells, and techniques for translating hES and IPS.[…]

Biodiversity Hotspots

Distribution and Protection of Conservation Priority Areas

Biodiversity and its conservation are among the main global topics in science and politics and perhaps the major challenge for the present and coming generations. This book written by international experts from different disciplines comprises general chapters on diversity and its measurement, human impacts on biodiversity hotspots on a global scale, human diversity itself and various geographic regions exhibiting high levels of diversity. The areas covered range from genetics and taxonomy to evolutionary biology, biogeography and the social sciences. In addition to the classic hotspots in the tropics, the book also highlights various other ecosystems harbouring unique species communities including coral reefs and the Southern Ocean. The approach taken considers, but is not limited to, the original hotspot definition sensu stricto and presents a chapter introducing the 35th hotspot, the forests of East Australia. While, due to a bias in data availability, the majority of contributions on particular[…]

Weed Science - A Plea for Thought - Revisited

Weed scientists are confident of increasing production through agricultural technology, including herbicides, but do not must ask if the moral obligation to feed people is sufficient justification for the benefits and harms achieved. A continuing, rigorous examination of the science’s goals that leads to appropriate change is advocated. Weed scientists have a research consensus - a paradigm - Weeds must be controlled. Herbicides are the best control technology. Agriculture’s practitioners should discuss the necessity and risks of their technology. Discussion must include scientific evidence and value-laden arguments.

Multiscale Fabrication of Functional Materials for Regenerative Medicine

Regenerative medicine demands new concepts and fabrication tools to improve our common knowledge about cell-cell and cell-environment interactions. In this work, Michele Bianchi shows that different kinds of signals, such as chemical, topographical, and electrical signals, can be arranged in a highly-controlled way. Furthermore, Michele uses scale lengths ranging from several micrometers to a few nanometers, through the employment of unconventional fabrication techniques. For each signal, Michele chose properly designed materials and fabrication methods. The external signals are capable of controlling cell adhesion and growth, opening the way for a systematic investigation of the environmental features affecting cell behaviour.

Werkstoffe

Aufbau und Eigenschaften von Keramik-, Metall-, Polymer- und Verbundwerkstoffen

Das Standardwerk zur Werkstoffkunde hat sich für die Studierenden der Ingenieurwissenschaften bestens bewährt. Ausgehend von einer einheitlichen werkstoffwissenschaftlichen Darstellung der Mikrostrukturen von Werkstoffen, ihren Bildungsbedingungen und den sich daraus ergebenden Stoffeigenschaften, werden die keramischen, metallischen sowie die Polymer- und Verbundwerkstoffe systematisch und praxisnah behandelt. Dabei werden neue Entwicklungen berücksichtigt, wie z.B. Supraleiter, Formgedächtnislegierungen, Biopolymere, Piezoelektrika und Nanostrukturen. Ebenso behandelt werden einige Aspekte der Werkstofftechnik sowie Stoffkreisläufe und Nachhaltigkeit. Für die 10. Auflage wurde das Text- und Bildmaterial aktualisiert und die Ausführungen zu Nanostrukturen erheblich erweitert. Das Buch bietet für Studierende an Universitäten und Fachhochschulen eine kompakte und systematische Darstellung der Werkstoffkunde auf neuestem Stand. Es wird ergänzt durch den Übungsband "Fragen und Antworten".

NanoBiosensing
Principles, Development and Application

This book will cover the full scope of nanoBiosensing, which combines the newest research results in the cross-disciplines of chemistry, biology, and materials science with biosensing and bioanalysis to develop novel detection principles, sensing mechanisms, and device engineering methods. It not only covers the important types of nanomaterials for biosensing applications, including carbon nanotubes, carbon nanofiber, quantum dots, fullerenes, fluorescent and biological molecules, etc., but also illustrates a wide range of sensing principles, including electrochemical detection, fluorescence, chemiluminescence, antibody-antigen interactions, and magnetic detection. The book details novel developments in the methodology and devices of biosensing and bioanalysis combined with nanoscience and nanotechnology, as well as their applications in biomedicine and environmental monitoring. Furthermore, the reported works on the application and biofunction of nanoparticles have attracted extensive attention and [...]
Energetic Materials at Extreme Conditions

David I.A. Millar’s thesis explores the effects of extreme conditions on energetic materials. His study identifies and structurally characterises new polymorphs obtained at high pressures and/or temperatures. The performance of energetic materials (pyrotechnics, propellants and explosives) can depend on a number of factors including sensitivity to detonation, detonation velocity, and chemical and thermal stability. Polymorphism and solid-state phase transitions may therefore have significant consequences for the performance and safety of energetic materials. In order to model the behaviour of these important materials effectively under operational conditions it is essential to obtain detailed structural information at a range of temperatures and pressures.

Modeling of Physiological Flows

This book offers a mathematical update of the state of the art of the research in the field of mathematical and numerical models of the circulatory system. It is structured into different chapters, written by outstanding experts in the field. Many fundamental issues are considered, such as: the mathematical representation of vascular geometries extracted from medical images, modelling blood rheology and the complex multilayer structure of the vascular tissue, and its possible pathologies, the mechanical and chemical interaction between blood and vascular walls, and the different scales coupling local and systemic dynamics. All of these topics introduce challenging mathematical and numerical problems, demanding for advanced analysis and efficient simulation techniques, and pay constant attention to applications of relevant clinical interest. This book is addressed to graduate students and researchers in the field of bioengineering, applied mathematics and medicine, wishing to engage themselves in the...
Mathematical Olympiad Treasures

This second edition of Mathematical Olympiad Treasures contains a stimulating collection of problems in geometry and trigonometry, algebra, number theory, and combinatorics. It encourages readers to think creatively about techniques and strategies for solving real-world problems, with new sections, revisions, and many more Olympiad-like problems at various levels of difficulty. The problems are clustered by topic into three self-contained chapters. The book begins with elementary facts, followed by carefully selected problems and detailed, step-by-step solutions, which then lead to more complicated, challenging problems and their solutions. Reflecting the vast experience of two professors and Mathematical Olympiad coaches, the text will be invaluable to teachers, students, and puzzle enthusiasts. The advanced reader is challenged to find alternative solutions and extensions of the proposed problems.

Features

"I had great pleasure in reading Mathematical Olympiad Treasures, by Titu Andreescu and Bogdan Enescu. This book is the fruit of the prodigious activity of two well-known creators of mathematics problems in various mathematical journals. . . . In all the chapters, the reader can find numerous challenging problems. All featured solutions are interesting, given in increasing level of difficulty. []."

Hamiltonian Structures and Generating Families

This book is an enhanced version of an earlier Russian edition. Besides thorough revisions, more emphasis was put on reordering the topics according to a category-theoretical view. This allows the mathematical results to be stated, proved, and understood in a much easier and elegant way. From the reviews of the Russian edition: "The main accent is shifted to the application . . . in geometrical optics, thermostatics and control theory, and not to the Hamiltonian mechanics only. . . . To make the book fairly self-contained, full details of basic definitions and all proofs are included. In this way, the majority of the text can be read without the prerequisite of a course in geometry. The excellent collection of examples illustrates the relatively hard and highly abstract mathematical theory and its hidden difficulties. . . . The book can rise real interest for specialists. . . . The . . . book is a significant input in the modern symplectic geometry and its applications." (Andrey Tiganov, Sr. []

Notions of Positivity and the Geometry of Polynomials

The book consists of solicited articles from a select group of mathematicians and physicists working at the interface between positivity and the geometry, combinatorics or analysis of polynomials of one or several variables. It is dedicated to the memory of Julius Borcea (1968-2009), a distinguished mathematician, Professor at the University of Stockholm. With his extremely original contributions and broad vision, his impact on the topics of the planned volume cannot be underestimated. All contributors knew or have exchanged ideas with Dr. Borcea, and their articles reflect, at least partially, his heritage.

Numerical Approximation Methods

This book presents numerical and other approximation techniques for solving various types of mathematical problems that cannot be solved analytically. In addition to well-known methods, it contains a collection of non-standard approximation techniques that appear in the literature but are not otherwise well known. This text also contains original methods developed by the author. It includes an extensive treatment of approximate solutions to problems that are only approximately solvable. It is also appropriate for students taking courses in computational mathematics classes. At the same time, the book opens many directions for possible future research.

Contents
- Preface
- 1 INTERPOLATION and CURVE FITTING
- 2 ZEROS of a FUNCTION

Asymptotics in Dynamics, Geometry and PDEs; Generalized Borel Summation

Proceedings of the conference held in CRM Pisa, 12-16 October 2009, Vol. II

These are the proceedings of a one-week international conference centered on asymptotic analysis and its applications. They contain major contributions dealing with: mathematical physics: PT symmetry, perturbative quantum field theory, WKB analysis, local dynamics: parabolic systems, small denominator questions, new aspects in mould calculus, with related combinatorial Hopf algebras and application to multizeta values, a new family of resurgent functions related to knot theory.

Features

Newton Methods for Nonlinear Problems

Affine Invariance and Adaptive Algorithms

This book deals with the efficient numerical solution of challenging nonlinear problems in science and engineering, both in finite dimension (algebraic systems) and in infinite dimension (ordinary and partial differential equations). Its focus is on local and global Newton methods for direct problems or Gauss-Newton methods for inverse problems. The term ‘affine invariance’ means that the presented algorithms and their convergence analysis are invariant under one out of four subclasses of affine transformations of the problem to be solved. Compared to traditional textbooks, the distinguishing affine invariance approach leads to shorter theorems and proofs and permits the construction of fully adaptive algorithms. Lots of numerical illustrations, comparison tables, and exercises make the text useful in computational mathematics classes. At the same time, the book opens many directions for possible future research.

**Mathematical Concepts of Quantum Mechanics**

The book gives a streamlined introduction to quantum mechanics while describing the basic mathematical structures underpinning this discipline. Starting with an overview of key physical experiments illustrating the origin of the physical foundations, the book proceeds with a description of the basic notions of quantum mechanics and their mathematical content. It then makes its way to topics of current interest, specifically those in which mathematics plays an important role. The more advanced topics presented include many-body systems, modern perturbation theory, path integrals, the theory of resonances, quantum statistics, mean-field theory, second quantization, the theory of radiation (non-relativistic quantum electrodynamics), and the renormalization group. With different selections of chapters, the book can serve as a text for an introductory, intermediate, or advanced course in quantum mechanics. The last four chapters could also serve as an introductory course in quantum field theory.

**Edmond Halley’s Reconstruction of the Lost Book of Apollonius’s Conics**

Apollonius’s Conics was one of the greatest works of advanced mathematics in antiquity. The work comprised eight books, of which four have come down to us in their original Greek and three in Arabic. By the time the Arabic translations were produced, the eighth book had already been lost. In 1710, Edmond Halley, then Savilian Professor of Geometry at Oxford, produced an edition of the Greek text of the Conics of Books I-IV, a translation into Latin from the Arabic versions of Books V-VII, and a reconstruction of Book VIII. The present work provides the first complete English translation of Halley’s reconstruction of Book VIII with supplementary notes on the text. It also contains 1) an introduction discussing aspects of Apollonius’s Conics 2) an investigation of Edmond Halley’s understanding of the nature of his venture into ancient mathematics, and 3) an appendices giving a brief account of Apollonius’s approach to conic sections and his mathematical techniques. This book will be of interest to...

Mathematik für Naturwissenschaftler

Was Sie im Bachelor wirklich brauchen und in der Schule nicht lernen

Features
Mathematik ist ein ziemliches Schreckgespenst für viele Studienanfänger in den Naturwissenschaften. Dabei muss das gar nicht sein. In diesem Buch geht der Autor einen neuen Weg. Statt alte Schulstoffe zu wiederholen, kann er die gewonnene Zeit nutzen, um Sie mit vielen anschaulichen Beispielen in die höhere Mathematik zu führen. Ohne Zahnweh lernen Sie so die mehrdimensionale Analyse kennen. […]

Falling Liquid Films

Falling Liquid Films gives a detailed review of state-of-the-art theoretical, analytical and numerical methodologies, for the analysis of dissipative wave dynamics and pattern formation on the surface of a film falling down a planar inclined substrate. This prototype is an open-flow hydrodynamic instability, that represents an excellent paradigm for the study of complexity in active nonlinear media with energy supply, dissipation and dispersion. It will also be of use for a more general understanding of specific events characterizing the transition to spatio-temporal chaos and weak/dissipative turbulence. Particular emphasis is given to low-dimensional approximations for such flows through a hierarchy of modeling approaches, including equations of the boundary layer type, averaged formulations based on weighted residuals approaches and long-wave expansions. Whenever possible the link between theory and experiment is illustrated, and, as a further bridge between the two, the development of […]

Stochastic Stability of Differential Equations

Since the publication of the first edition of the present volume in 1980, the stochastic stability of differential equations has become a very popular subject of research in mathematics and engineering. To date exact formulas for the Lyapunov exponent, the criteria for the moment and almost sure stability, and for the existence of stationary and periodic solutions of stochastic differential equations have been widely used in the literature. In this updated volume, readers will find important new results on the moment Lyapunov exponent, stability index and some other fields, obtained after publication of the first edition, and a significantly expanded bibliography. This volume provides a solid foundation for students in graduate courses in mathematics and its applications. It is also useful for those researchers who would like to learn more about this subject, to start their research in this area or to study the properties of concrete mechanical systems subject to random perturbations.

Features
Since the publication of the first edition of the present volume in 1980, the stochastic stability of differential equations has become a very popular subject of research in mathematics and engineering. To date exact formulas for the Lyapunov exponent, the criteria for the moment and almost sure stability, and for the existence of stationary and periodic solutions of stochastic differential equations have […]

Regression Analysis Under A Priori Parameter Restrictions

This monograph focuses on the construction of regression models with linear and non-linear constrain inequalities from the theoretical point of view. Unlike previous publications, this volume analyses the properties of regression with inequality constraints, investigating the flexibility of inequality constraints and their ability to adapt in the presence of additional a priori information. The implementation of inequality constraints improves the accuracy of models, and decreases the likelihood of errors. Based on the obtained theoretical results, a computational technique for estimation and prognostication problems is suggested. This approach lends itself to numerous applications in various practical problems, several of which are discussed in detail. The book is useful for graduate students, PhD students, as well as for researchers who specialize in applied statistics and optimization. This book may also be useful to specialists in other branches of applied mathematics, technology, etc.

Features
- Construction of various models of objects under uncertainty is one of the most important problems in modern decision making theory. Regression models are some of the most prevalent tools for modeling under uncertainty and are widely applied in different branches of science such as in industrial research, agriculture, medicine, and business and economics.

Green's Functions and Infinite Products

Bridging the Divide

This textbook accounts for two seemingly unrelated mathematical topics drawn from two separate areas of mathematics that have no evident points of contiguity. Green’s function is a topic in partial differential equations and covered in most standard texts, while infinite products are used in mathematical analysis. For the two-dimensional Laplace equation, Green’s functions are conventionally constructed by either the method of images, conformal mapping, or the eigenfunction expansion. The present text focuses on the construction of Green’s functions for a wide range of boundary-value problems. Green’s Functions and Infinite Products provides a thorough introduction to the classical subjects of the construction of Green’s functions for the two-dimensional Laplace equation and the infinite product representation of elementary functions. Every chapter begins with a review guide, outlining the basic concepts covered. A set of carefully designed challenging exercises is available at the end of each chapter.

Contents
- INTRODUCTION.
- CHAPTER 1: Infinite Products & Elementary Functions.
- 1.1 Classical Euler representations.
- 1.2 Alternative derivations.
- 1.3 Other elementary functions.
- 1.4 Chapter exercises.
- CHAPTER 2: Green’s Functions for the Laplace Equation.
- 2.1 Construction by the method of images.
- 2.2 Conformal mapping method.
- 2.3 Chapter exercises.
- CHAPTER 3: Green’s Functions for ODE.
- 3.1 Construction by defining properties.
- 3.2 Method of variation of parameters.
- 3.3 Chapter exercises.
- CHAPTER 4: Method of Eigenfunction Expansion.
- 4.1 Hilbert’s theorem.
- 4.2 Cartesian coordinates.

Rational Number Theory in the 20th Century

From PNT to FLT

The last one hundred years have seen many important achievements in the classical part of number theory. After the proof of the Prime Number Theorem in 1896, a quick development of analytical tools led to the invention of various new methods, like Brun’s sieve method and the circle method of Hardy, Littlewood and Ramanujan; developments in topics such as prime and additive number theory, and the solution of Fermat’s problem. Rational Number Theory in the 20th Century: From PNT to FLT offers a short survey of 20th century developments in classical number theory, documenting between the proof of the Prime Number Theorem and the proof of Fermat’s Last Theorem. The focus lays upon the part of number theory that deals with properties of integers and rational numbers. Chapters are divided into five time periods, which are then further divided into subject areas. With the introduction of each new topic, developments are followed through to the present day. This book will appeal to graduate researchers.

Features
The last one hundred years have seen many important achievements in the classical part of number theory. After the proof of the Prime Number Theorem in 1896, a quick development of analytical tools led to the invention of various new methods, like Brun’s sieve method and the circle method of Hardy, Littlewood and Ramanujan. These methods were the driving force behind new advances in prime and additive number theory.

A Sequence of Problems on Semigroups

This text consists of a sequence of problems which develop a variety of aspects in the field of semigroups or operators. Many of the problems are not found easily in other books. Written in the Socratic/Moore method, this is a problem book without the answers presented. To get the most out of the content requires high motivation from the reader to work out the exercises. The reader is given the opportunity to discover important developments of the subject and to quickly arrive at the point of independent research. The compactness of the volume and the reputation of the author lends this consider set of problems to be a ‘classic’ in the making. This text is highly recommended for us as supplementary material for 3 graduate level courses.

Features
A Sequence of Problems on Semigroups consists of an arrangement of problems which are designed to develop a variety of aspects to understanding the area of one-parameter semigroups of operators. Written in the Socratic/Moore method, this is a problem book with neither the proofs nor the answers presented. To get the most out of the content requires high motivation to work out the exercises. However, [...] Contents

2011 International Symposium on Computational Models for Life Sciences (CMLS-11)

This conference aims to bring biologists, medical and health-science researchers together with computational scientists to focus on problems at the frontier of computational life sciences. The conference proceedings consists of research papers addressing novel applications of computer, physical, engineering and mathematical models for solving modern challenging problems in life sciences. Topics include image analysis, computer vision, pattern analysis and classification, information visualization, signal processing, control theory, information theory, statistical analysis, numerical analysis, fractals and chaos, optimization, simulation and modeling, computational intelligence methods, machine learning, data mining, decision support systems, database integration and management.

Functional Equations in Mathematical Analysis

The stability problem for approximate homomorphisms, or the Ulam stability problem, was posed by S. M. Ulam in the year 1941. The solution of this problem for various classes of equations is an expanding area of research. In particular, the pursuit of solutions to the Hyers-Ulam and Hyers-Ulam-Rassias stability problems for sets of functional equations and inequalities has led to an outpouring of recent research. This volume, dedicated to S. M. Ulam, presents the most recent results on the solution to Ulam stability problems for various classes of functional equations and inequalities. Comprised of invited contributions from notable researchers and experts, this volume presents several important types of functional equations and inequalities and their applications to problems in mathematical analysis, geometry, physics and applied mathematics. "Functional Equations in Mathematical Analysis" is intended for researchers and students in mathematics, physics, and other computational and applied sciences.

Neutral and Indifference Portfolio Pricing, Hedging and Investing

This book is written for quantitative finance professionals, students, educators, and mathematically inclined individual investors. It is about some of the latest developments in pricing, hedging, and investing in incomplete markets. With regard to pricing, two frameworks are fully elaborated: neutral and indifference pricing. With regard to hedging, the most conservative and relaxed hedging formulas are derived. With regard to investing, the neutral pricing methodology is also considered as a tool for connecting market asset prices with optimal positions in such assets. Srdjan D. Stojanovic is Professor in the Department of Mathematical Sciences at University of Cincinnati (USA) and Professor in the Center for Financial Engineering at Suzhou University (China).

Linear and Nonlinear Integral Equations

Linear and Nonlinear Integral Equations: Methods and Applications

Linear and Nonlinear Integral Equations: Methods and Applications is a self-contained book divided into two parts. Part I offers a comprehensive and systematic treatment of linear integral equations of the first and second kinds. The text brings together newly developed methods to reinforce and complement the existing procedures for solving linear integral equations. The Volterra integral and integro-differential equations, the Fredholm integral and integro-differential equations, the Volterra-Fredholm integral equations, singular and weakly singular integral equations, and systems of these equations, are handled in this part by using many different computational schemes. Selected worked-through examples and exercises will guide readers through the text. Part II provides an extensive exposition on the nonlinear integral equations and their varied applications, presenting in an accessible manner a systematic treatment of ill-posed Fredholm problems, bifurcation points, and singular points. Selected ([- [ ]]

Numerical Methods with Worked Examples: Matlab Edition

This book is for students following an introductory course in numerical methods, numerical techniques or numerical analysis. It introduces MATLAB as a computing environment for experimenting with numerical methods. It approaches the subject from a pragmatic viewpoint; theory is kept at a minimum commensurate with comprehensive coverage of the subject and it contains abundant worked examples which provide easy understanding through a clear and concise theoretical treatment. This edition places even greater emphasis on 'learning by doing' than the previous edition. Fully documented MATLAB code for the numerical methods described in the book will be available as supplementary material to the book on http://extras.springer.com

Creating Infrastructures for Latino Mental Health

Latinos are the fastest growing and largest minority group in the United States. In 2008, this group numbered over 47 million; by 2050, the population is expected to triple, reaching 133 million. Traditionally, Latinos have immigrated to large urban centers (e.g., New York, Los Angeles) that over long periods of time developed a complex infrastructure to receive new immigrants. Increasingly, new Spanish-speaking immigrants are moving into areas of the country previously unfamiliar to them. Although urban co-ethnic communities continue to be the destination of many newcomers, immigrants from Mexico, Central America, and South America in pursuit of low-skilled labor opportunities are settling in small towns and rural areas of the South and Midwest. This new demographic trend has resulted in the creation of the term “new growth communities,” which refers to small rural areas that are now home to a small but rapidly growing Hispanic population. Unfortunately, these communities, which are now present in[...]

Features
The growing Latino population of the United States stands poised to shape the nation’s future throughout the twenty-first century, yet serious obstacles hinder the full participation of the Latino community in American society. Access to mental health care poses a particular challenge for many segments of the population. Although significant scholarship has focused on the delivery of culturally competent[...]

Treatment of Esophageal and Hypopharingeal Squamous Cell Carcinoma

Squamous cell carcinoma of the esophagus has a lower incidence than other gastrointestinal tract cancer; however, there are many difficult issued related to the choice of appropriate therapy for these patients. In recent years, the use of multimodal treatment has greatly improved the prognosis of patients affected by this disease but several aspects of the oncological and surgical management are still controversial. This book aims to give a homogeneous approach to esophageal cancer treatment, based on the author’s lifetime experience in conjunction with exhaustive review of recent literature. In each chapter surgeons and oncologists will find appropriate tools for correct management of the diagnosis and therapy of this difficult disease. The book analyzes all the aspects of staging and treatment, such as modern diagnostic and staging techniques (MRI or PET-CT), endoscopic treatment of early cancer, new minimally invasive and open surgical techniques, and combined treatment. In addition, there are[...]

Endemic Cretinism

Responding to a renewed interest in the growing problem of iodine deficiency worldwide, Drs. Charles Oxnard and Peter Obendorf, along with experienced translator and anatomist John Dennison, take a fresh look at the classic text, Der endemische Kretinismus, published in 1936 by Springer. Translated here for the first time into English, this landmark text will be a welcome resource for researchers confronting the problem of iodine deficiency. Oxnard and Obendorf point out that there is very little detailed knowledge or numerical data on cretinism available in the English-speaking world. In addition, highly-renowned Professor Basil S. Hetzel, recently-retired World Health Organization Chairman of the International Council for Control of Iodine Deficiency Disorders, published in 2009 with Dr Chen Zu-poi on the resurgence of iodine deficiency in China. Indeed, throughout the entire developing world there may be as many as two billion people at risk to iodine deficiency; perhaps three quarters of[...]

Forensic Histopathology

Fundamentals and Perspectives

This book, which combines the features of an atlas and a textbook, presents findings in forensic histology, immunohistochemistry, and cytology based on microscopic investigations using different stainings and different antibodies. The principal aim is to provide practitioners with detailed information and guidance on how microscopy can help to clarify the cause of sudden and unexpected death. Many of the topics will be of interest not only to forensic pathologists but also to general pathologists, whether practitioners or researchers. Examples include the pathology of drug abuse, wound age determination, adverse drug reactions, histopathology of the sudden infant death syndrome, and age determination of myocardial infarction. Both typical and unusual findings are demonstrated with the aid of numerous high-quality color illustrations, and other key literature in forensic histology and immunohistochemistry is highlighted for each topic.

Brain Mapping

From Neural Basis of Cognition to Surgical Applications

The goal of this book is to make a link between fundamental research in the field of cognitive neurosciences, which now benefits from a better knowledge of the neural foundations of cerebral processing, and its clinical application, especially in neurosurgery — itself able to provide new insights into brain organization. The anatomical bases are presented, advances and limitations of the different methods of functional cerebral mapping are discussed, updated models of sensorimotor, visuospatial, language, memory, emotional, and executive functions are explained in detail. In the light of these data, new strategies of surgical management of cerebral lesions are proposed, with an optimization of the benefit-risk ratio of surgery. Finally, perspectives about brain connectivity and plasticity are discussed on the basis of translational studies involving serial functional neuroimaging, intraoperative cortico-subcortical electrical mapping, and biomathematical modeling of interactions between parallel.[…]

Color Atlas of Fetal and Neonatal Histology

Color Atlas of Fetal and Neonatal Histology serves as a comprehensive atlas of the developmental histology of the major organs from 15 weeks gestation to the neonatal period. Each section includes text on basic embryologic processes that influence the development of each organ and highlight major histologic features that correspond with certain developmental periods. In addition, there are many color photomicrographs at key developmental stages to assist the reader in identifying appropriate histologic changes at each developmental stage. This book will be of great value to students of embryology, pathology residents and fellows, and attending pathologists who perform fetal autopsies.

Atlas of SPECT-CT

The field of nuclear medicine has evolved rapidly in recent years, and one very important aspect of this progress has been the introduction of hybrid imaging systems. PET-CT has already gained widespread acceptance in many clinical settings, especially within oncology, and now SPECT-CT promises to emulate its success. Useful applications of this new approach have been identified not only in oncology but also in endocrinology, cardiology, internal medicine, and other specialties. This atlas, which includes hundreds of high-quality images, is a user-friendly guide to the optimal use and interpretation of SPECT-CT. The full range of potential SPECT-CT applications in clinical routine is considered and assessed by acknowledged experts.

The book is designed to serve as a reference text for technologists, and nuclear medicine and radiology residents.

Neurofibromatoses in Clinical Practice

Neurofibromatoses in Clinical Practice provides a succinct, accessible guide to the neurofibromatoses including diagnosis, management protocols and indications for referral to specialist centers. Neurocutaneous diseases are complex to diagnose and treat and many patients require specialist multidisciplinary management and surveillance. Due to multiple disease manifestations, patients can present to different clinicians without specialist expertise - general practitioners, pediatricians, neurologists, geneticists, surgeons and ophthalmologists. The clinically focused format will enable rapid consultation during clinics, facilitate disease pattern recognition, and indicate care pathways. The clinical quiz highlights common pitfalls in diagnosis and management and a glossary and reference section provide details for access to specialist NF clinics throughout the UK and internationally. Written by experts in the field Neurofibromatoses in Clinical Practice is a succinct and practical guide for.[…]

Sjögren’s Syndrome

Practical Guidelines to Diagnosis and Therapy

The key knowledge assembled in this book comprises today’s most comprehensive resource on Sjögren’s syndrome. Sjögren’s patients require the care of a wide variety of clinical and surgical specialists to treat their disease and improve their quality of life. This volume presents a broad multidisciplinary approach, enlisting the expertise of well-respected authors from around the world, covering the specialties of rheumatology, ophthalmology, oral medicine, oral surgery, otolaryngology, hematology, and others. This practical clinical resource begins with an overview of Sjögren’s myths, pearls and tips, information for referring physicians, and diagnostic and classification and criteria. The second section covers pathogenesis, providing the backbone for our understanding current diagnostics and therapeutics. The third section is devoted to clinical manifestations and therapeutic considerations. It covers the entire spectrum of symptoms and treatment, infused with the experience and astute[…]

Antibiotic Policies
Controlling Hospital Acquired Infection

The first book was on "Theory and Practice" of antibiotic stewardship in its broadest sense - the how to do it and the do's and don'ts. The second, on 'Controlling resistance' was very much on the relationships between use and resistance and beginning to home in on the hospital as the main generator of resistance, but mainly looking at it from a disease/c clinical perspective. The last 3 chapters on MRSA, ended where the 3rd book will take off. "Controlling HAI" will concentrate on specific MDR organisms highlighting their roles in the current pandemic of HAI and emphasizing that the big issue is not so much infection control but antibiotic control, in the same way that antibiotic over-reliance/over-use has caused the problem in the first place. Up till now the emphasis for controlling MRSA, C difficile and all the other MDROs has very much been on IC, which clearly isn't working. This book will gather all the evidence for the increasingly popular view that much more must be done in the area of...

Features: Hospitals worldwide are currently suffering an epidemic of infections, generated in and spreading in those institutions whose very "raison d'être" is to protect and improve the health of their patients. This paradox comes at a time of possibly unprecedented investment in preventative measures (infection control). To better control these infections, however, we need to understand their causes, many of which...

Contents: Healthcare Associated Infections - The Size of the Problem. - The Antibiotic Paradox. - The Epidemiology of Pan/Extreme Drug Resistance. - Hospital Antibiotic Stewardship to Control Resistance - how should it be done?. - Controlling C. difficile infection and the role of antibiotic stewardship. - The control of MRSA. - The role of antibiotic policies in controlling VRE. - The control of ESBL producing bacteria. - Controlling Hospital-Acquired Infection due to Carbapenem-Resistant Enterobacteriaceae (CRE). - Control of multi-drug-resistant Acinetobacter infections. - The control of...

Diabetes Care for the Older Patient
A Practical Handbook

The management of older people with diabetes requires careful attention to the specific needs of this age group. This practical handbook addresses the issues surrounding the care of older diabetic patients, including dementia, frailty, depression and cardiovascular risk. Intended for day-to-day use in clinical practice, each chapter closes with a list of salient practical points in the clinical management of older patients with diabetes. Concisely written by authorities in the field, this book is a valuable resource for all those involved in the diabetes care of older people.

Ischemic Optic Neuropathies

Ischemic optic neuropathy, often referred to as a stroke of the optic nerve, is one of the major causes of visual impairment or loss of vision. Yet it is a highly controversial and confusing subject because of the general lack of in-depth scientific understanding of the subject. In this book the leading authority in the field describes in detail the current knowledge about the different forms of the often devastating disease. Insights into the underlying pathogenesis and peculiar clinical features are given, leading the reader to the most appropriate way of management. This information will help any physician dealing with patients who suffer from sudden loss of vision.

Cardiology in Family Practice

A Practical Guide

A concise summary of the most important medical and scientific topics concerning cardiovascular medicine in the primary care environment, this new edition of Cardiology in Family Practice has been updated with cutting-edge information and useful tips. Written in an easy-to-read format (background, diagnosis and disease management) and emphasizing practical techniques for evaluation and treatment, the authors explain the basic mechanisms underlying cardiovascular disease states and the treatment strategies that arise from them. Topics include stable angina, acute coronary syndromes, arrhythmias, hypertension, pericardial and valvular diseases, and hyperlipidemia. New figures have been added to each chapter in this edition. This book is a must-have for primary care physicians who wish to keep up to date with the rapidly changing field of cardiology.

Contents
Stable Angina:.- Acute Coronary Syndromes:.- Arrhythmias:.- Hypertension:.- Congestive Heart Failure:.- Valvular Disease:.- Pericardial Disease:.- Prevention of Bacterial Endocarditis:.- Hyperlipidemia.

Features
The second edition of Cardiology In Family Practice: A Practical Guide offers a clear description of state-of-the-art approaches to cardiovascular illnesses specifically tailored for family physicians and primary care practitioners. Comprehensively updated from the first edition in 2006, this revision includes discussion of: -stable angina-acute coronary coronary

La cancérologie au quotidien

Médecine et patients alliés face au cancer

À côté des connaissances et techniques spécialisées propres aux oncologues – radiothérapeutes, médicaux ou chirurgiens –, les « rencontres singulières » avec des patients préoccupés, menacés ou atteints par un cancer et leur prise en charge demandent une grande variété de compétences pratiques. Elles sont nécessaires aux praticiens spécialisés en médecine générale ou d’autres disciplines, et à tous les autres professionnels de santé impliqués, à un titre ou à un autre, face aux cancers : infirmières, dentistes, kinésithérapeutes, diététiciennes, pharmaciens, travailleurs sociaux, etc. De plus en plus, les patients eux-mêmes et leurs proches sont mis à contribution. C’est à toutes ces personnes que s’adresse cet ouvrage fondé sur la large expérience d’un des plus grands centres français de lutte contre le cancer. Face à ce fléau, qui représente une maladie « totale », essentiellement organique mais à fort retentissement psychologique et social, cet ouvrage oppose une approche globale,

Adipose Stem Cells and Regenerative Medicine

The therapeutic potential of the use of adipose stem cells in regenerative medicine has been increasingly recognized, and in recent years concrete clinical benefits have accrued as these cells have been explored for a variety of applications. This readable and informative textbook tracks the progress that has been made in this fascinating new area of biomedicine. All aspects of the subject are considered, with particular attention to adipose cell biology, adipose tissue engineering strategies, and the diverse clinical applications of adipose stem cells. Funding issues, industrial approaches, regulatory challenges, and future directions are also examined. The two editors have vast experience in the field and have chosen leading experts from different countries to write on each topic. This book will excite the interest of all researchers, clinicians, and students wishing to gain an in-depth understanding of adipose stem cells and their flourishing role in regenerative medicine.

Features

Adipose tissue represents an abundant and accessible source of adult stem cells with the ability to differentiate along multiple lineage pathways, including cardiac, neural, cartilage, muscle, and bone tissue. The therapeutic potential of the use of adipose stem cells in regenerative medicine has been increasingly recognized, and in recent years concrete clinical benefits have accrued as these cells have...

Contents

ADIPOSE CELL BIOLOGY.- ADIPOSE STEM CELL ENGINEERING.- From Liposuction to Adipose Stem Cell Engineering.- Isolation of Stem Cells from Human Adipose Tissue: Technique, Problems & Pearls.- Engineered Scaffolds and Matrices: Tailored Biomaterials for Adipose Stem Cell Engineering.- Fundamentals and Principles of Biomolecules in Adipose Stem Cell Engineering.- Gene Therapy Used for Adipose Stem Cell Engineering Applications.- CLINICAL PERSPECTIVE OF ADIPOSE STEM CELL ENGINEERING IN REGENERATIVE MEDICINE.- The role of Adipose Stem Cell Engineering in Cardiology Diseases.- The role of...

Advances in Radiation Oncology in Lung Cancer

This is the second, completely updated edition of a comprehensive book in which many of the world’s leading lung cancer specialists discuss the recent advances in the radiation oncology of lung cancer and reflect on the latest research findings. The first three sections cover the basic science of lung cancer, clinical investigations, including histology and staging, and a wide range of fundamental treatment considerations. Current treatment strategies for small cell and non-small cell lung cancer are then explained and evaluated in detail, with due attention to novel approaches that promise further improvements in outcome. The various types of treatment-related toxicity are discussed, and quality of life studies and prognostic factors are also considered. After evaluating the latest technological and biological advances, including IMRT, IMAT, cyber knife treatment, and tomotherapy, the book concludes by thorough consideration of specific aspects of clinical research in lung cancer.

Features

Although decades of laboratory and clinical research have led to incremental improvement in treatment outcome, lung cancer remains one of the most deadly diseases. In the second, completely updated edition of this comprehensive book, many of the world’s leading lung cancer specialists discuss the recent advances in the radiation oncology of lung cancer and reflect on the latest research findings. The first...

The Ethics of Screening in Health Care and Medicine

Serving Society or Serving the Patient?

Medical or health-oriented screening programs are amongst the most debated aspects of health care and public health practices in health care and public health ethics, as well as health policy discussions. In spite of this, most treatments of screening in the research literature restrict themselves to isolated scientific aspects, sometimes complemented by economic analyses or loose speculations regarding policy aspects. At the same time, recent advances in medical genetics and technology, as well as a rapidly growing societal focus on public health concerns, inspires an increase in suggested or recently started screening programs. This book involves an in-depth analysis of the ethical, political and philosophical issues related to health-oriented screening programs. It explores the considerations that arise when health care interacts with other societal institutions on a large scale, as is the case with screening. What values may be promoted or compromised by screening programs? What conflicts off...

Contents

Acknowledgements.- Chapter 1: Introduction.- 1.1 The Wilson and Jungner Criteria.- 1.2 Point and Plan.- 1.3 The Concept of Screening.- Chapter 2: Why Screening?.- 2.1 Screening, Treatment and Prevention: Preliminary Remarks.- 2.2 Health: Life and Well being.- 2.2.1 Health and Counselling.- 2.2.2 The Good of People and of the Population.- 2.3 Autonomy: - 2.3.1 Respecting and Promoting Autonomy: - 2.3.2 Promoting Autonomy through Screening.- 2.4 Justice.- 2.5 Summary.- Chapter 3: Screening - What, When and Whom?.- 3.1 Diseases and Groups.- 3.1.1 Prenatal Screening.- 3.1.2 Neonatal Screening.- ...

Imaging of Acute Appendicitis in Adults and Children

This book is a comprehensive account of imaging of acute appendicitis and other appendiceal diseases. Background information is first provided on clinical presentation, perforation and negative appendectomy rates, and treatment options. The role of each imaging modality – radiography, ultrasound, CT, and MRI – is then considered separately in adults and children with suspected acute appendicitis. Many high-quality illustrations are included, and detailed information is provided on appropriate protocols and radiation saving. Further chapters addresses the spontaneously resolving and chronic appendicitis as well as other appendiceal lesions and review the findings of evidence-based medicine and cost-effectiveness analyses. Emergency physicians, pediatricians, surgeons, and radiologists will all find this book to be an excellent source of information and guidance.

Oncolytic Viruses

Methods and Protocols

Since the first report of an engineered oncolytic virus, there has been a continuing and steady increase of interest in the field, and while bench research remains vital for the translation of research in this field, its success depends on breakthroughs in clinical studies. Oncolytic Viruses: Methods and Protocols describes the construction and purification of capsid-modified adenoviruses as well as oncolytic adenoviruses, presents protocols for many individual virus species including engineering and preparation of oncolytic HSV, propagation, purification, and in vivo testing of oncolytic VSV, details properties of oncolytic reovirus and NDV, and describes the generation and testing of next generation of oncolytic vaccinia virus. As the host immune system plays a critical role in determining efficacy of oncolytic viruses, two chapters are devoted to the study of immune response. Recent advances in stem cell research have led the field in two distinct directions: the use of stem cells as carrier[...]

The Role of Laparoscopy in Emergency Abdominal Surgery

This is the first time a book about laparoscopy in emergency abdominal surgery has been published. Numerous articles have been published in specific surgical journals, but, until now, there has not been a book that collates all the aspects of this little-known field. The aim of this volume is to achieve a complete and easy presentation of all the implications associated with laparoscopy in emergency abdominal surgery. The book should be a manual that can be easily consulted by digestive, general, and specialized surgeons, especially in an emergency. The authors’ contributions are founded on evidence-based medicine, which give the book scientific credibility, but this is coupled with their experience of daily practice, which adds an important complementary dimension to evidence-based medicine. This is balanced by an emphasis on clarity and accessibility, because the ultimate aim of the book is educational. We hope this book will be frequently consulted, in depth, not only by specialist practitioners [...]”

Orthopedic Sports Medicine

Principles and Practice

Aim of this book is to give an update on the main issues in sports traumatology and orthopedics, involving different body sections. Exploring the most important aspects of sports medicine - from anatomy to normal movements description, from diagnosis to sports injuries treatment, from conservative to surgical treatments - it gives a global overview of the field, describing also diagnostic tools recently introduced in this field, such as hip arthroscopy, and taking into consideration related areas like nutrition, prevention, training and rehabilitation. The single chapters deal with relevant problems such as emergencies on the field, pathologies of the upper and lower extremity, spine problems in athletes. Each injury is approached on the basis of both the specific body area and of the different sports/activities. Written by a multidisciplinary team of experts, this volume will be a fundamental book for orthopedic surgeons, physiotherapists, general practitioners, personal and athletic trainers.

Pediatric Sedation Outside of the Operating Room

A Multispecialty International Collaboration

This comprehensive guide provides tips and instruction for the entire range of specialists that utilize pediatric sedation. Each specialty receives tailored coverage that focuses on its unique patient population, challenges, potential solutions, and sedation techniques. Each chapter is written by a leading specialist in the field. A comprehensive spectrum of pediatric sedation will be covered, which will be of interest to oncologists, pediatricians, hospitalists, intensivists, radiologists, emergency medicine specialists, anesthesiologists, nurses, dentists, and gastroenterologists. Background chapters cover pharmacology as well as pediatric anatomy, with special focus on the airway and respiratory mechanics. The future of pediatric sedation is also reviewed as well as the cutting-edge research that is being done in the field.

Features
Pediatric sedation has evolved to include many specialties. This is the first book which is directed towards the broad range of specialists who deliver pediatric sedation outside of the operating room.

The contributing authors are internationally recognized leaders in sedation and in their specialty. The specialty-specific chapters are designed to be applicable to all sedation providers [...]

Master Techniques in Blepharoplasty and Periorbital Rejuvenation

Master Techniques in Blepharoplasty and Eyelid Reconstruction is a comprehensive, multi-specialty textbook and surgical atlas on blepharoplasty and eyelid reconstruction, presenting multiple competing and complementary techniques by the leading experts in the field of plastic surgery, ophthalmic plastic surgery, and oculoplastic surgery. Only the most pioneering and time-tested surgical procedures are presented in step-by-step, illustrative detail. All areas of eyelid surgery are covered in a balanced and systematic approach. An accompanying online surgical atlas shows digitally videotaped procedures by the leading authors, extremely useful to any surgeon interested in blepharoplasty. Master Techniques in Blepharoplasty and Eyelid Reconstruction is the definitive textbook and atlas for any surgeon who interested in this topic.

Features
The eyes are a central feature of facial appearance, expression and provide us the ability to see, our most important sensory function. For this reason, rejuvenation of the eyelids and adjacent areas is master critical to all surgeons who operate on these very delicate and interconnected structures. Master Techniques in Blepharoplasty and Periorbital Rejuvenation focuses on mastering the evaluation and execution of aesthetic procedures by the leading authors, extremely useful to any surgeon interested in blepharoplasty. The book offers a comprehensive understanding rooted in Catholic anthropology and moral theory of the meaning and limits of informed and proxy consent to experimentation on human subjects. In particular, it seeks to articulate the rationale for proxy consent in both therapeutic and nontherapeutic settings. As to the former, the book proposes that the Golden Rule, recognizing the basic inclinations of human nature toward objective goods perfective of human persons, should underpin the notion of proxy consent to experimentation on humans. As to the latter, an additional scrutiny of the amount of risk involved is necessary, since the risk-benefit ratio frequently invoked to justify higher-risk therapeutic research does not exist in its nontherapeutic counterpart. This study discusses a number of possible solutions to this question and develops a position that builds upon the objective notion of the human good.

Knee Arthroscopy

Arthroscopic procedures are a welcome alternative to total joint replacement and, with millions of procedures performed each year, the field of knee arthroscopy is rapidly advancing as instrumentation and applications are developed and refined. Knee Arthroscopy is a technique-oriented ‘how-to’ guide, written by internationally renowned authorities who present the latest advances in the field in a clear, step-by-step format. Chapters discuss issues such as meniscal transplantation, articular cartilage repair, anterior cruciate ligament treatment and other surgical procedures, and the text is supplemented throughout by case studies, clinical pearls and a wealth of illustrations. Knee Arthroscopy is a comprehensive reference sure to be invaluable for anyone involved in care of the knee, from the general orthopedist to the most skilled knee surgeon.

Le malattie infiammatorie croniche dell’intestino Colloquio con Silvio Danese e Marco Greco

Colpiscono circa 170 mila italiani, con un trend in forte ascesa. Si chiamano Malattia di Crohn e colite ulcerosa: malattie autoimmuni, ovvero causate da un errore del sistema immunitario che si scatena contro se stesso. Perché? Come faremo queste furia distruttive? Sono stati fatti grandi passi avanti ma molto resta ancora da scoprire e molte sono le questioni controversie: dalle cause della malattia ai metodi di diagnosi più tempestive, alle terapie. Le malattie autoimmuni dell’intestino colpiscono in giovane età, tra i 15 e i 45 anni, hanno un impatto molto negativo sulla qualità della vita di chi si ammala e pongono questioni di primissimo piano: come si convive con una diagnosi di questo tipo, qual è il migliore accesso alle cure, quali le disposizioni di legge che facilitano la vita dei malati. Questo libro vuole raccontare la vita e la battaglia quotidiana delle persone colpite da queste malattie, le scelte che devono fare e gli ostacoli che si trovano ad affrontare, dal punto di vista di uno[...]

Innovative Surgical Techniques in Oncology

I chirurghi oncologici nella loro pratica clinica quotidiana spesso sono chiamati ad affrontare situazioni particolari o molto complesse che devono quindi essere in grado di individuare e di saper gestire. L’aggiornamento qui offerto sulle più recenti evoluzioni tecniche in chirurgia oncologica è necessario per raggiungere i migliori risultati possibili in termini di remissione e di qualità della vita del paziente. L’introduzione delle nuove tecniche presentate nel volume è fondamentale per superare i limiti imposti dalle procedure standard. Nuove tecnologie chirurgiche in oncologia è un efficace strumento di aggiornamento che copre tutte le opzioni terapeutiche nel trattamento delle neoplasie e sottolinea la centralità del coordinamento interdisciplinare nella cura delle patologie oncologiche. Chirurghi, oncologi, radiologi, chirurghi estetici e personale infermieristico sono chiamati a lavorare in squadra e ad adottare un approccio integrato alla cura del paziente.

Preventive Dermatology in Infectious Diseases

The physician’s responsibility continues to increase daily while providing health care in the 21st century; not only in keeping up with the increase of information, but also having to pay more attention to patient compliance. In addition, patients are educated, and often appreciate participation with a provider about treatment and medication choice. Often they have access to the Internet and other medical information and want to make informed choices along with their physician. Preventive Dermatology in Infectious Diseases will convey prevention and medication information to patients and thus help them reap the benefits of participating in their own health care and disease reduction.

Features
We live in a world between expectation and reality, and the goal for dermatologists is to help ourselves and our patients anticipate problems and provide solutions. Preventive Dermatology in Infectious Diseases is the first book fully dedicated to prevention of these types of skin disease. It seems almost counter-intuitive to take on this task, because so much of what we do in dermatology is [...]

Common Treatments in Preventive Dermatology

How to treat your patient

The physician’s responsibility continues to increase daily while providing health care in the 21st century; not only in keeping up with the increase of information, but also having to pay more attention to patient compliance. In addition, patients are educated, and often appreciate participation with a provider about treatment and medication choice. Often they have access to the Internet and other medical information and want to make informed choices along with their physician. Common Treatments in Preventive Dermatology will convey prevention and medication information to patients and thus help them reap the benefits of participating in their own health care and disease reduction.

Features
Chronic age takes a toll on all and is especially visible on the most recognizable features of our facial skin. As the population ages it is demanding more help, including prevention of skin problems. We live in a world between expectation and reality, and the goal for dermatologists is to help ourselves and our patients anticipate problems and provide solutions.Common Treatments in [...]

Lasers in Dermatology and Medicine

Laser technology is constantly evolving and progressing. The use of laser therapy is vastly expanding and for this reason a medical book of this magnitude is necessary. Lasers and Light Therapy includes an up-to-date comprehensive look at lasers and light therapy not only in the field of Cutaneous Laser Surgery, but in other medical specialties as well.

Features
Laser technology is quickly evolving with developments in laser technology and new indications in their use. Laser medicine has become a major discipline in its own right, with applications in dermatology, plastic surgery, ophthalmology, cardiology, gynecology, otolaryngology, neurology and neurosurgery. Lasers in Dermatology and Medicine offers a comprehensive review of all the major [...]"
Nutrition and Skin

Lessons for Anti-Aging, Beauty and Healthy Skin

The book will educate and decode the role of vitamins, essential fatty acids and other nutraceuticals on skin health and their tremendous impact to the current needs of the skin care industry. Focus on conditions, as acne, dermatitis, dry scaly skin or alopecia will provide a comprehensive knowledge of the relationship of nutrition and skin as well as the current attempts in nutritional or dermatological research. It will stimulate food professionals to brainstorm for new products and opportunities that will target the emerging antiaging and wellness trends and modern consumer needs.

Features
Nutrition and skin health are often linked in the mind of the consumer. The last few years have produced excellent nutritional studies addressing the effects of nutrients on skin. This book aims to summarize these studies and discuss the relationship between certain nutrients and skin health in the hope of encouraging and enabling food and skin care professionals to create products that promote skin health. [...]
Aesthetic Medicine
Art and Techniques

The Aesthetic Medicine: Art and Techniques provides step-by-step instructions in the procedures and techniques commonly employed in aesthetic medicine. The book is divided into four parts, the first two of which offer an introduction to aesthetic medicine and discuss preoperative assessment and treatment. Detailed guidance is then given on a wide range of cutaneous procedures, including the use of botulinum toxins, dermabrasion and microdermabrasion, cryotherapy, chemical peel skin resurfacing, laser treatments, mesotherapy, sclerotherapy, capacitive radiofrequency treatment, and the use of dermarollers. The final part of the book is devoted to techniques employed in shaping the face and body, such as breast and facial augmentation, penile enhancement, liposuction, and Management of hair loss or excess hair. All procedures are depicted with the aid of numerous high-quality illustrations and color photographs. This book will serve as an excellent guide for both beginners and experienced practitioners.

Quick Reference Handbook for Surgical Pathologists

This book is a compilation of high yield, at-a-glance summaries for various topics on which pathologists frequently need information in a quick reference format while at the microscope (or when cramping for the boards). The authors are early-career pathologists who have compiled this book from the perspective of pathologists-in-training. The focus is not organ-based histologic criteria, but rather everything else that goes into pathologic diagnoses but is difficult to keep committed to memory. The emphasis is on immunohistochemistry, special stains, grading systems, molecular markers, tumor syndromes, and helpful clinical references. The book has a unique format in that the information is presented primarily in tables and diagrams accompanied by minimal explanatory text. It is intended to serve as a ’peripheral brain’ for pathology residents and also practicing pathologists, where frequently needed information is readily accessible and easy to navigate.

Features

Clinical Neuroimmunology
Multiple Sclerosis and Related Disorders

Clinical Neuroimmunology: Multiple Sclerosis and Related Disorders serves as an indispensable resource for physicians interested in, and dealing with, this very complex and evolving branch of neurology. This comprehensive title provides an introduction to basic neuroimmunology and principles of immunotherapy and also serves as a thorough guide to immune-mediated disorders of the central and peripheral nervous system, as well as other systemic disorders with a significant neuroimmunologic component. The chapters are written by experts in their fields and include the most up to date scientific information. This volume is made to simplify complex immunological mechanisms and to focus on practical patient related issues. Clinical Neuroimmunology: Multiple Sclerosis and Related Disorders is an invaluable addition to the literature and will be of significant interest to neurologists, residents and fellows, internists, and general practitioners who treat patients with neurologic disorders and other...
Une histoire du cancer du sein en Occident

Enseignements et réflexions

Si selon Soljenitsyne, le mélanome est la reine des tumeurs malignes, depuis toujours le cancer du sein en est le modèle. Qu’il s’agisse de l’épidémiologie, de l’étiologie, de la pathogénie, du diagnostic et du traitement, l’évolution des idées à l’âge des siècles explique bien souvent les nôtres. Certes le diagnostic et le traitement de ce fléau ont fait en moins de deux siècles des progrès extraordinaires mais certaines questions restent toujours sans réponse et beaucoup d’idées que l’on croit modernes sont en fait fort anciennes. Le propos de l’auteur n’est pas ici celui de l’historien, mais celui du médecin recherchant le fil conducteur à savoir comment l’application plus ou moins consciente du modèle des maladies infectieuses à celui des cancers a conduit à bien des désillusions. Mais aussi, comment les nouvelles données de la biologie moléculaire vont sans doute amener à un démembrement de cette affection et font déjà naître de nouveaux espaces thérapeutiques.

Features

Depuis toujours, le cancer du sein est le modèle des cancers. L’importante augmentation de sa fréquence, liée essentiellement à l’allongement de la durée de vie et aux modes de vie, en a fait un vrai problème de santé publique. Heureusement, les progrès des méthodes diagnostiques, la précocité de leur mise en œuvre et les avancées considérables en matière de thérapeutique ont grandement diminué le risque [...]
Coma et états de conscience altérée

Features
En dépit des progrès de la médecine, la prise en charge des patients récupérant d’un coma constitue toujours un réel challenge. Depuis plus d’une dizaine d’années, les membres du Coma Science Group n’ont cessé de travailler sur cette thématique que ce soit à des fins scientifiques ou cliniques. Cet ouvrage est le fruit de leur travail. L’objectif est d’offrir aux cliniciens comme aux chercheurs un […]

Diagnostic Molecular Pathology in Practice

A Case-Based Approach

This entirely case-based book covers a broad cross-section of the practical issues frequently encountered in the day-to-day activities of a molecular genetic pathologist. The book is divided into four sections on the principal areas addressed in molecular genetic pathology (MGP): inherited diseases, hematopathology, solid tumors, and infectious diseases. The topics covered by the cases in each section include test selection, qualitative and quantitative laboratory techniques, test interpretation, prognostic and therapeutic considerations, ethical considerations, technical troubleshooting, and result reporting. This book will be ideal for trainees in MGP and clinical molecular genetics who require a practice-based preparation for board examinations. It will also be very useful for residents and fellows in medical specialties to which MGP is pertinent, and for practicing pathologists who want to learn more about the current practice of molecular diagnostics.

Features
The specialty of molecular genetic pathology (MGP) focuses on the molecular identification of inherited genetic conditions, acquired genetic diseases, and infectious diseases. This entirely case-based book covers a broad cross-section of the practical issues frequently encountered in the day-to-day activities of a molecular genetic pathologist. The book is divided into four sections on the principal areas […]

Minimally Invasive Surgery in Orthopedics

Upper Extremity Handbook

Minimally Invasive Surgery in Orthopedics: The Upper Extremity Handbook contains all of the valuable chapters from Section I of Scuderi and Tria's 2010 hardcover reference. Newly available in an affordable softcover format, this book covers minimally invasive procedures and techniques for the shoulder, elbow, wrist and other topics applicable to the upper extremity. The book is fully illustrated with more than one hundred pictures and clearly written for ease of understanding. Surgeons, residents, and fellows alike will find this thorough and focused handbook invaluable.

Minimally Invasive Surgery in Orthopedics: The Upper Extremity Handbook
**Fertility Preservation**

**Emerging Technologies and Clinical Applications**

A growing majority of women in the western hemisphere have been delaying initiation of childbearing to later in life. Consequently, more women in their late 30s to early 40s are attempting to get pregnant for the first time than ever before. Since the incidence of most cancers increases with age, delayed childbearing results in more female cancer survivors interested in fertility preservation. In this book, the editors provide strategies for fertility preservation in women and men who require gonadotoxic treatment. In addition, epidemiological, ethical, medico-legal, psychologic, and social aspects of fertility preservation are discussed. Using a format that combines concise scientific background with practical methodological information and easy-to-grasp algorithms, the chapters all conform to a uniform structure, including a brief abstract, keyword glossary, step by step protocol of laboratory procedures, key issues in commentary and a list of references. The result is a unique, practical reference.[…]

Coronary Artery CTA
A Case-Based Atlas

Coronary Artery CTA: A Case-Based Atlas presents the reader with a review of a broad range of cardiac CT angiography (CCTA) cases from the teaching file of Dr. Claudio Smuclovisky. Each case consists of extensive CCTA images, a brief history, diagnosis, discussion, and pearls and pitfalls. The goal of the book is to provide the reader with a broad range of CCTA cases that include normal anatomy, congenital coronary anomalies, coronary artery disease, percutaneous coronary intervention, postsurgical coronary revascularization, and extra-coronary abnormalities. Dr. Smuclovisky is the Director of the South Florida Medical Imaging Cardiovascular Institute in Boca Raton, Florida, which has achieved the successful integration of radiology, cardiology, and cardiothoracic surgery. Close collaboration among specialties has been the major cause of their success in achieving CCTA reports that are clinically relevant and cost effective, and their results are presented here. The discussions and pearls and [...] Features

CT of the Acute Abdomen

CT of the Acute Abdomen provides a comprehensive account of the use of CT in patients with acute abdomen. Recent important developments in CT, including multislice CT and multiplanar reconstructions, receive particular attention. CT features are clearly illustrated, and pitfalls and differential diagnoses are discussed. The first section of the book presents epidemiological and clinical data in acute abdomen. The second and third sections discuss the key CT findings and their significance and discuss the technological background. The fourth and fifth sections, which form the main body of the book, examine in detail the various clinical applications of CT in nontraumatic and traumatic acute abdomen. This book will serve as an ideal guide to the performance and interpretation of CT in the setting of the acute abdomen; it will be of value to all general and gastrointestinal radiologists, as well as emergency room physicians and gastrointestinal surgeons.

Rural Surgery

Challenges and Solutions for the Rural Surgeon

Incorporating and balancing advancing specialization is a significant challenge of modern surgery. The changes of surgical education and early specialization is a smaller spectrum of experience of graduating surgeons joining the rural workforce. Surgeons working in rural and remote hospitals, however, must be proficient in the great breadth of current surgical practice and face a number of challenges and demands that are specific to rural surgery. This textbook provides an update on the evidence and surgical techniques for the experienced rural surgeon and most importantly is a guideline for younger surgeons and surgical trainees joining the rural workforce in rural and remote areas around the world.

Nutrition Guide for Physicians

Nutrition Guide for Physicians is a desktop reference guide on nutrition and its clinical implications for health and disease through the lifecycle. Presented in a new softcover format and user-friendly style, it serves as a valuable resource of practical information on nutrition for physicians in their daily practice. Nutrition Guide for Physicians is divided into three parts that cross the spectrum of nutritional concerns for improving the practice of medicine. Part One provides basic nutritional principles for physicians. Part Two covers nutrition through the lifecycle and optimal nutrition patterns through all stages of development. Part Three covers diet and its role in prevention, cause and treatment of disease. All chapters include figures and tables that provide useful descriptive and visual reviews. "Key points" and succinct "conclusions" are also provided for each topic. Nutrition Guide for Physicians provides a wide perspective of the impact that nutrition has upon medical practice and [..]

Auditory Prostheses

New Horizons

Cochlear implants are currently the standard treatment for profound sensorineural hearing loss. In the last decade, advances in auditory science and technology have not only greatly expanded the utility of electric stimulation to other parts of the auditory nervous system in addition to the cochlea, but have also demonstrated drastic changes in the brain in responses to electric stimulation, including changes in language development and music perception. Volume 20 of SHAR focused on basic science and technology underlying the cochlear implant. However, due to the newness of the ideas and technology, the volume did not cover any emerging applications such as bilateral cochlear implants, combined acoustic-electric stimulation, and other types of auditory prostheses, nor did it review brain plasticity in responses to electric stimulation and its perceptual and language consequences. This proposed volume takes off from Volume 20, and expands the examination of implants into new and highly exciting [...]

Philosophy

Niels Bohr's Complementarity

Its Structure, History, and Intersections with Hermeneutics and Deconstruction

This book explores the modern physicist Niels Bohr's philosophical thought, specifically his pivotal idea of complementarity, with a focus on the relation between the roles of what he metaphorically calls "spectators" and "actors." It seeks to spell out the structural and historical complexity of the idea of complementarity in terms of different modes of the 'spectator-actor' relation, showing, in particular, that the reorganization of Bohr's thought starting from his 1935 debate with Einstein and his collaborators is characterized by an extension of the dynamic conception of complementarity from non-physical contexts to the very field of quantum theory. Further, linked with this analysis, the book situates Bohr's complementarity in contemporary philosophical context by examining its intersections with post-Heideggerian hermeneutics as well as Derridean deconstruction. Specifically, it points to both the close affinities and the differences between Bohr's idea of the 'actor-spectator' relation and […]

Law, Order and Freedom
A Historical Introduction to Legal Philosophy

The central question in legal philosophy is the relationship between law and morality. The legal systems of many countries around the world have been influenced by the principles of the Enlightenment: freedom, equality and fraternity. The position is similar in relation to the accompanying state ideal of the democratic constitutional state as well as the notion of a welfare state. The foundation of these principles lies in the ideal of individual autonomy. The law must in this view guarantee a social order which secures the equal freedom of all. This freedom is moreover fundamental because in modern pluralistic societies a great diversity of views exist concerning the appropriate way of life. This freedom ideal is however also strongly contested. In Law, Order and Freedom, a historical overview is given pertaining to the question of the extent to which the modern Enlightenment values can serve as the universal foundation of law and society.

Contents
Chapter 1 Legal Philosophy: The Most Important Controversies; Maris.- Chapter 2 Antiquity and the Middle Ages; Van der Vliet (2.1-2.4, with contributions by Van der Vliet). - Chapter 3 The Commencement of the Modern Age; Den Hartogh, with an introduction by Maris.- Chapter 4 Hobbes, Locke and Spinoza; Den Hartogh (4.1, 4.2, 4.4), Jacobs (4.3). - Chapter 5 Eighteenth-Century French Enlightenment; Kaptein (5.1-5.7; 5.6 partly by Maris).- Chapter 6 The Synthesis of Kant; Maris (6.1, 6.2, 6.5), Jacobs (6.3, 6.4.3, 6.6), Van der Vliet (6.4.1, [...]}

Integrating History and Philosophy of Science
Problems and Prospects

Though the publication of Kuhn’s Structure of Scientific Revolutions seemed to herald the advent of a unified study of the history and philosophy of science, it is a hard fact that history of science and philosophy of science have increasingly grown apart. Recently, however, there has been a series of workshops on both sides of the Atlantic (called ‘&HPS’) intended to bring historians and philosophers of science together to discuss new integrative approaches. This is therefore an especially appropriate time to explore the problems with and prospects for integrating history and philosophy of science. The original essays in this volume, all from specialists in the history of science or philosophy of science, offer such an exploration from a wide variety of perspectives. The volume combines general reflections on the current state of history and philosophy of science with studies of the relation between the two disciplines in specific historical and scientific cases.

Features

The Realism-Antirealism Debate in the Age of Alternative Logics

The relation between logic and knowledge has been at the heart of a lively debate since the 1960s. On the one hand, the epistemic approaches based their formal arguments in the mathematics of Brouwer and intuitionistic logic. Following Michael Dummett, they started to call themselves ‘antirealists’. Others persisted with the formal background of the Frege-Tarski tradition, where Cantorian set theory is linked via model theory to classical logic. Jaakko Hintikka tried to unify both traditions by means of what is now known as ‘explicit epistemic logic’. Under this view, epistemic contents are introduced into the object language as operators yielding propositions from propositions, rather than as metalogical constraints on the notion of inference. The Realism-Antirealism debate has thus had three players: classical logicians, intuitionists and explicit epistemicians. The editors of the present volume believe that in the age of Alternative Logics, where manifold developments in logic happen at a[...]}

Handbook of Analytic Philosophy of Medicine

Medical practice is practiced morality, and clinical research belongs to normative ethics. The present book elucidates and advances this thesis by: 1. analyzing the structure of medical language, knowledge, and theories; 2. inquiring into the foundations of the clinical encounter; 3. introducing the logic and methodology of clinical decision-making; 4. suggesting comprehensive theories of organism, life, and psyche; of health, illness, and disease; of etiology, diagnosis, prognosis, prevention, and therapy; and 5. investigating the moral and metaphysical issues central to medical practice and research.

The Fullness of the Logos in the Key of Life

Book II. Christo-Logos: Metaphysical Rhapsodies of Faith (Itinerarium mentis in deo)

This highly personal account of a lifetime's spiritual and philosophical inquiry charts the author's journey of faith through contemporary culture. Distinguishing between what she posits as the 'universal' and the 'rhapsodic' logos, Tymieniecka interrogates concepts as varied as creativity and the media, joy and suffering, and truth and ambiguity. She contemplates the possibilities and limits of communication between human beings, and outlines what she calls the 'transnatural destiny' of the human soul. The book asks that unlike theory, which unfolds a logical continuity, and unlike dialogue, which is directed sequentially upward toward intellectual conclusions, the mode of reflection of the 'rhapsodic logos' imposes no limits or caps upon its understanding. Instead, the 'logoi' flow interlaces the rhapsodic cadences of our reflections on reality, in all their innumerable fluctuations, and sifts them to mold the intimate mind/soul inwardness that we experience as faith. The radiative meditations...

The Importance of Assent

A Theory of Coercion and Dignity

The view that persons are entitled to respect because of their moral agency is commonplace in contemporary moral theory. What exactly this respect entails, however, is far less uncontroversial. In this book, Van der Rijt argues powerfully that this respect for persons' moral agency must also encompass respect for their subjective moral judgments - even when these judgments can be shown to be fundamentally flawed. Van der Rijt scrutinises the role persons' subjective moral judgments play within the context of coercion and domination. His fresh, original analysis of Kant's third formulation of the Categorical Imperative reveals how these judgments are intimately connected to a person's dignity. The result is an insightful new account of coercion, a novel Kantian reformulation of the republican notion of non-domination and a compelling, innovative argument in favour of retributive justice. In this admirably clear and insightful work, Van der Rijt develops an original account of coercion and dignity...

Rethinking Virtue Ethics

Rethinking Virtue Ethics offers a model of Aristotelian virtue ethics based on a deductive paradigm. This book argues that, contrary to what many contemporary thinkers are inclined to believe, Aristotelian virtue ethics is consistent with at least some action-guiding moral principles being true unconditionally, and that a justification for general moral principles can be grounded in fundamental concepts within Aristotle's theory. An analysis of ethical propositions that hold for the most part is proposed that fits well within the deductive paradigm developed. This unique interpretation of virtue ethics has implications for recent discussions of the virtues in social psychology, issues about how fundamental moral principles are known, questions about the justification of inalienable rights, debates about moral particularism and generalism, and discussions of moral realism and anti-realism.

Features

Advances in the Physics of Particles and Nuclei - Volume 31

The series Advances in the Physics of Particles and Nuclei (APPN) is devoted to the archiving, in printed high-quality book format, of the comprehensive, long shelf-life reviews published in The European Physical Journal A and C. APPN will be of benefit in particular to those librarians and research groups, who have chosen to have only electronic access to these journals. Occasionally, original material in review format and refereed by the series’ editorial board will also be included. This volume contains the following two reviews:Nora Brambilla et al.: Heavy Quarkonium: Progress, Puzzles and Opportunities Daniel Wicke: Properties of the Top Quark

International Symposium on New Faces of Atomic Nuclei

Festschrift in Honour of Akito Arima’s 80th Birthday

The conference was about basic nuclear science (nuclear physics), with emphasis on theoretical models used in nuclear structure physics. Some interdisciplinary links to astrophysics, medical physics and the use of nuclear energy were also discussed. The purpose of this symposium was to celebrate the 80th birthday of Prof. Akito Arima, who is one of the most famous nuclear physicists in the world, and his award of the Order of Culture.

A Concise Introduction to the Statistical Physics of Complex Systems

This concise primer (based on lectures given at summer schools on complex systems and on a masters degree course in complex systems modeling) will provide graduate students and newcomers to the field with the basic knowledge of the concepts and methods of statistical physics and its potential for application to interdisciplinary topics. Indeed, in recent years, statistical physics has begun to attract the interest of a broad community of researchers in the field of complex system sciences, ranging from biology to the social sciences, economics and computer science. More generally, a growing number of graduate students and researchers feel the need to learn some basic concepts and questions originating in other disciplines without necessarily having to master all of the corresponding technicalities and jargon. Generally speaking, the goals of statistical physics may be summarized as follows: on the one hand to study systems composed of a large number of interacting ‘entities’, and on the other to[...]

Physics of Transitional Shear Flows

Instability and Laminar-Turbulent Transition in Incompressible Near-Wall Shear Layers

Starting from fundamentals of classical stability theory, an overview is given of the transition phenomena in subsonic, wall-bounded shear flows. At first, the consideration focuses on elementary small-amplitude velocity perturbations of laminar shear layers, i.e. instability waves, in the simplest canonical configurations of a plane channel flow and a flat-plate boundary layer. Then the linear stability problem is expanded to include the effects of pressure gradients, flow curvature, boundary-layer separation, wall compliance, etc. related to applications. Beyond the amplification of instability waves is the non-modal growth of local stationary and non-stationary shear flow perturbations which are discussed as well. The volume continues with the key aspect of the transition process, that is, receptivity of convectively unstable shear layers to external perturbations, summarizing main paths of the excitation of laminar flow disturbances. The remainder of the book addresses the instability phenomena. [...]

Contents
Part I Fundamentals of the linear stability theory: 1 Concept of hydrodynamic stability 1.1 Hydrodynamic stability 1.2 Stability of fluid motion in time 1.2.1 Critical parameters for onset of instability 1.2.2 Conditional stability 1.2.3 Growth of disturbance energy References Further Reading 2 Theoretical aspects 2.1 Formulation of linear hydrodynamic stability problems 2.1.1 Spectral formulation of stability 2.1.2 Inviscid instability mechanism 2.1.3 Viscous instability mechanism 2.2 Instability in space 2.3 Gaster’s transformation

Springer.com

Every amateur astronomer has at least heard of the many different catalogs of deep-sky objects; the most well known are the Messier, the Caldwell, the Herschel, and the NGC. All of these catalogs are, in general, readily available, but very few amateur observers are in a position to choose the best catalog for their particular deep-sky observing program, know how to use the catalog, or even realize just how many there are out there! The Amateur Astronomer’s Guide to the Deep-sky Catalogs is a single compilation of the historical and modern astronomical deep-sky catalogs. It discusses their origins, compares what’s in them, explains how to interpret the data they contain, and even outlines how readers can create suitable custom catalogs for their own use. The last section provides a set of three deep-sky catalogs created by the author, for observers of different levels of experience, from newcomer to expert.

Features
All of us familiar with astronomy know of Charles Messier and his early work on creating a catalog of celestial objects. Did you know that Messier was compiling a list of objects to avoid when searching the skies? He was a comet hunter, and he wanted to not mistake other things for comets. Other lists and catalogs followed this, and many, including Messier’s, have become popular with amateur [...]

The Performance of the ATLAS Detector

The ATLAS detector at the CERN Large Hadron Collider is an apparatus of unprecedented complexity, designed to probe physics in proton-proton collisions at centre-of-mass energies up to 14 TeV. It was installed in its underground cavern at the LHC during the period 2004 to 2008. Testing of individual subsystems began immediately with calibration systems and cosmic rays, and by 2008 full detector systems could be operated with the planned infrastructure, readout, and monitoring systems. Several commissioning runs of the full detector were organized in 2008 and 2009. During these runs the detector was operated continuously for several months with its readout triggered by cosmic ray muons. At the same time, regular calibrations of individual detector systems were made. In the course of these runs, signals from tens of millions of cosmic ray events were recorded. These commissioning runs continued until the first beam-beam collisions in late 2009. This volume is a collection of seven performance papers.[...]

From Special Relativity to Feynman Diagrams

A Course of Theoretical Particle Physics for Beginners

The first two chapters of the book deal, in a detailed way, with relativistic kinematics and dynamics, while in the third chapter some elementary concepts of General Relativity are given. Eventually, after an introduction to tensor calculus, a Lorentz covariant formulation of electromagnetism is given its quantization is developed. For a proper treatment of invariance and conservation laws in physics, an introductory chapter on group theory is given. This introduction is propedeutical to the discussion of conservation laws in the Lagrangian and Hamiltonian formalism, which will allow us to export this formalism to quantum mechanics and, in particular, to introduce linear operators on quantum states and their transformation laws. In the last part of the book we analyze, in the first quantized formalism, relativistic field theory for both boson and fermion fields. The second quantization of free fields is then introduced and some preliminary concepts of perturbation theory and Feynman diagrams are[...]

Features
This book aims at filling a gap between the basics courses of classical and quantum mechanics and advanced courses of (relativistic) quantum mechanics and field theory. Particular emphasis is given to the role of symmetry in modern theoretical physics. For this reason this book is particularly suited to those students who are interested in a deeper knowledge of modern developments in elementary particle [...]

L'enigma dei raggi cosmici

Le più grandi energie dell'universo

Grazie ad avventurosi studi fu possibile dimostrare un secolo fa che parte della radiazione naturale che si osserva sulla Terra è di natura extraterrestre: era la scoperta dei cosiddetti "raggi cosmici", particelle che arrivano da misteriosi acceleratori nell'universo, probabilmente buchi neri supermassicci e resti di supernova, a energie anche centinaia di milioni di volte di quelle a cui riusciamo a produrle con i più potenti acceleratori della Terra. A cent'anni dalle prime scoperte questo libro si propone, con l'aiuto di documenti scoperti recentemente, di raccontare la vera storia di questa appassionante avventura scientifica e le frontiere dell'esplorazione dei raggi cosmici.

Protein Folding and Misfolding
Shining Light by Infrared Spectroscopy

Infrared spectroscopy is a new and innovative technology to study protein folding/misfolding events in the broad arsenal of techniques conventionally used in this field. The progress in understanding protein folding and misfolding is primarily due to the development of biophysical methods which permit to probe conformational changes with high kinetic and structural resolution. The most commonly used approaches rely on rapid mixing methods to initiate the folding event via a sudden change in solvent conditions. Traditionally, techniques such as fluorescence, circular dichroism or visible absorption are applied to probe the process. In contrast to these techniques, infrared spectroscopy came into play only very recently, and the progress made in this field up to date which now permits to probe folding events over the time scale from picoseconds to minutes has not yet been discussed in a book. The aim of this book is to provide an overview of the developments as seen by some of the main contributors to...

The Mythology of the Night Sky
An Amateur Astronomer's Guide to the Ancient Greek and Roman Legends

The Mythology of the Night Sky is intended primarily for amateur astronomers who would like to know the mythology behind the names of constellations and planets. It deals with the 48 constellations identified by the ancient Greek astronomer Ptolemy, as well as all the planets of our solar system and their moons, which are named after Roman gods. To assist practical observers the book gives the location and description of each constellation, including named stars and deep-sky objects. Readers are encouraged to observe and image the constellations for themselves, and there is a lot of practical information in this book to help them along the way. In addition to providing a detailed (and mostly Greek) myth of the constellations and the vast soap opera that was part of the Ancient Greek pantheon, this book also addresses the planets of the Solar System, which are named after the Roman - not Greek - gods.

Features
Every amateur astronomer can easily recognize most of the constellations, but how many of us know the story behind them? What myths did the Ancient Greeks weave around the mighty hunter Orion that places him so prominently in the sky? Did you know that this mythical being was said to have been killed by Diana, herself a hunter, while he was exhausted by his fight with Scorpius? The constellation of [...]

L’universo in 25 centimetri

Da quando è iniziata la rivoluzione della fotografia digitale, con i sensori CCD che hanno soppiantato la pellicola, qualsiasi appassionato del cielo, dotandosi di una strumentazione non particolarmente costosa, può diventare esploratore attivo dell’immensità della volta celeste, potenzialmente un vero e proprio astronomo.In questo libro, l’autore mostra quanto è possibile ottenere (ed è tanto!) nello studio del cielo con un telescopio amatoriale di soli 25 cm di diametro, anche attraverso tecniche di ripresa innovative, come la fotografia dei pianeti fatta in pieno giorno, o la ripresa di dettagli della superficie di Venere, nonostante il fatto che il pianeta sia perennemente avvolto da una coltre impenetrabile di nubi.

Features

Introduction to the Mechanics of Space Robots

Based on lecture notes on a space robotics course, this book offers a pedagogical introduction to the mechanics of space robots. After presenting an overview of the environments and conditions space robots have to work in, the author discusses a variety of manipulatory devices robots may use to perform their tasks. This is followed by a discussion of robot mobility in these environments and the various technical approaches. The last two chapters are dedicated to actuators, sensors and power systems used in space robots. This book fills a gap in the space technology literature and will be useful for students and for those who have an interest in the broad and highly interdisciplinary field of space robotics, and in particular in its mechanical aspects.

Key Processes in Solar-Terrestrial Physics

"Key processes in Solar-Terrestrial Physics" deals with a nice selection of key phenomena concerning Solar-Terrestrial relations. During the week of October 4–9, 2009, about 160 participants from 19 countries met at the Itamambuca resort area of Ubatuba, Sao Paulo, Brazil to discuss the influence of solar variability on geophysical and heliospheric phenomena at a conference organized by the International Living With a Star (ILWS) Program of NASA and by the National Institute of Space Research (INPE) of Brazil. Five of the invited review talks of this Conference are being published in this special issue, plus one (on magnetospheric reconnection) especially invited to cover a missing important subject within the Solar-Terrestrial physics domain. Previously published in Space Science Reviews journal, Vol. 158/1, 2011.

Contents

Key processes in solar-terrestrial physics - Global properties of solar flares - Grad-Shafranov reconstruction of magnetic flux ropes in the near-earth space - Interplanetary origin of intense, superintense and extreme geomagnetic storms - Physics of magnetospheric variability - Electron superintense and extreme geomagnetic storms - Earth space - Interplanetary origin of intense, properties of solar flares - Grad-Shafranov key processes in Solar-Terrestrial Physics - Global phenomena at a conference organized by the [...]
The Spiral Galaxy M33

This book summarizes the gathering of information on and the growing understanding of M33 from the 1920s, when Hubble first determined its true nature, to the 21st century, when the Hubble Telescope probed deeply into its many secrets. With its regular symmetrical spiral structure, and its being not tilted too much and near enough to allow detailed studies of its stars, M33 is well-suited for the study of a typical spiral galaxy. In this work, Paul Hodge places current research on M33 (and similar galaxies) in both historical and global perspectives. The book is written in a language accessible for specialists and non-specialists, for professional and amateur astronomers, for scientists and the curious public and, most importantly, for students.

Features

Vortex, Molecular Spin and Nanovorticity

An Introduction

The subject of this book is the physics of vortices. A detailed analysis of the dynamics of vortices will be presented. The important topics of vorticity and molecular spin will be dealt with, including the electromagnetic analogy and quantization in superfluids. The effect of molecular spin on the dynamics of molecular nano-confined fluids using the extended Navier-Stokes equations will also be covered, especially important to the theory and applicability of nanofluids and associated devices. The nanoscale boundary layer and nanoscale vortex core are regions of intense vorticity (molecular spin). It will be shown, based on molecular kinetic theory and thermodynamics, that the macroscopic (solid body) rotation must be accompanied by internal rotation of the molecules. Electric polarization of the internal molecular rotations about the local rotation axis—the Barnett effect—occurs. In such a spin aligned system, major changes in the physical properties of the fluid result.

Features

Optimised Projections for the Ab Initio Simulation of Large and Strongly Correlated Systems

Density functional theory (DFT) has become the standard workhorse for quantum mechanical simulations as it offers a good compromise between accuracy and computational cost. However, there are many important systems for which DFT performs very poorly, most notably strongly-correlated materials, resulting in a significant recent growth in interest in ‘beyond DFT’ methods. The widely used DFT+U technique, in particular, involves the addition of explicit Coulomb repulsion terms to reproduce the physics of spatially-localised electronic subspaces. The magnitude of these corrective terms, measured by the famous Hubbard U parameter, has received much attention but less so for the projections used to delineate these subspaces. The dependence on the choice of these projections is studied in detail here and a method to overcome this ambiguity in DFT+U, by self-consistently determining the projections, is introduced. The author shows how nonorthogonal representations for electronic states may be used to [...] [..]

Econodynamics

The Theory of Social Production

In this book the theory of social production is systematically formulated in terms and concepts of classical political economy and neo-classical economics. In this way the subject becomes accessible not only to professional researchers in areas of the theory of production and economic growth, but also to the educated reader who is curious about the principles behind the functioning of a national economy. The book can be considered as an introduction for students with a background in physics, chemistry and engineering, who wish to specialize in economics. It is explained how the growth of production is connected with achievements in technological consumption of labour and energy. The theory allows one to analyse the past and the present of the social production system and to build scripts of the future progress. The book could be interesting for energy specialists who are engaged in planning and analysing production and consumption of energy carriers and determining energy policy, and for economists[...]

Many-Body Schrödinger Dynamics of Bose-Einstein Condensates

At extremely low temperatures, clouds of bosonic atoms form what is known as a Bose-Einstein condensate. Recently, it has become clear that many different types of condensates -- so called fragmented condensates -- exist. In order to tell whether fragmentation occurs or not, it is necessary to solve the full many-body Schrödinger equation, a task that remained elusive for experimentally relevant conditions for many years. In this thesis the first numerically exact solutions of the time-dependent many-body Schrödinger equation and compared to the approximate Gross-Pitaevskii and Bose-Hubbard theories. It is thereby shown that the dynamics of Bose-Einstein condensates is far more intricate than one would anticipate based on these approximations. A special conceptual innovation in this thesis are optimal lattice models. It is shown how all quantum lattice models of condensed matter physics that are based on Wannier functions, e.g. the Bose/Fermi Hubbard...[

General and Statistical Thermodynamics

This textbook explains completely the general and statistical thermodynamics. It begins with an introductory statistical mechanics course, deriving all the important formulae meticulously and explicitly, without mathematical short cuts. The main part of the book deals with the careful discussion of the concepts and laws of thermodynamics, van der Waals, Kelvin and Clausius theories, ideal and real gases, thermodynamic potentials, phonons and all the related aspects. To elucidate the concepts introduced and to provide practical problem solving support, numerous carefully worked examples are of great value for students. The text is clearly written and punctuated with many interesting anecdotes. This book is written as main textbook for upper undergraduate students attending a course on thermodynamics.

Biology, Nanotechnology, Toxicology, and Applications

Proceedings of the 5th BioNano Tox and Applications International Research Conference

Learn how the multidisciplinary BioNanoTox Conference brings together various disciplines encompassing biology, chemistry, toxicology, computational sciences, mathematics, physics, engineering, and nanotechnology. BioNanoTox (Biology, Nanotechnology, and Toxicology) is a novel field of research that investigates biological systems (plants, human, and animals) and the environment in conjunction with nanomaterials. BioNanoTox is the platform for vigorous interactions between disciplines, and offers attending researchers to demonstrate their latest findings. This brings new knowledge together and encourages interdisciplinary research collaboration.

Cell and Tissue Organization in the Circulatory and Ventilatory Systems

The volumes in this authoritative series present a multidisciplinary approach to modeling and simulation of flows in the cardiovascular and ventilatory systems, especially multiscale modeling and coupled simulations. The cardiovascular and respiratory systems are tightly coupled, as their primary function is to supply oxygen to and remove carbon dioxide from the body's cells. Because physiological conduits have deformable and reactive walls, macroscopic flow behavior and prediction must be coupled to nano- and microscopic events in a corrector scheme of regulated mechanisms. Therefore, investigation of flows of blood and air in physiological conduits requires an understanding of the biology, chemistry, and physics of these systems together with the mathematical tools to describe their functioning. The present volume is devoted to cellular events that allow adaptation to environmental conditions, particularly mechanotransduction. It begins with cell organization and a survey of cell types in the[...]

Review of Progress in Quantitative Nondestructive Evaluation

Volume 30A; Volume 30B

These proceedings provide the latest research and development papers in nondestructive evaluation (NDE) and its applications to flaw detection, material properties, NDE, and structural reliability. The papers are prepared by internationally known researchers and are reviewed by qualified scientists. Papers cover recent developments in essentially all measuring techniques (ultrasounds, electromagnetic, x-rays, thermal, acoustic emission, etc.) and their applications to flaw detection and structural reliability.

Nuclear Physics

This meeting was attended mostly by Brazilian researchers and selected collaborators invited from abroad. The current studies in Nuclear Physics, from basic theoretical work to instrumentation and applied methods, were presented and discussed in conferences, oral, and poster presentations, in order to disseminate new ideas and evaluate the progress in this research area.

### Theory of Phase Transitions in Polypeptides and Proteins

There are nearly 100 000 different protein sequences encoded in the human genome, each with its own specific fold. Understanding how a newly formed polypeptide sequence finds its way to the correct fold is one of the greatest challenges in the modern structural biology. The aim of this thesis is to provide novel insights into protein folding by considering the problem from the point of view of statistical mechanics. The thesis starts by investigating the fundamental degrees of freedom in polypeptides that are responsible for the conformational transitions. This knowledge is then applied to the statistical mechanics description of helix-coil transitions in polypeptides. Finally, the theoretical formalism is generalized to the case of proteins in an aqueous environment. The major novelty of this work lies in combining (a) a formalism based on fundamental physical properties of the system and (b) the resulting possibility of describing the folding/unfolding transitions quantitatively. The clear...

### Problems in Quantum Mechanics with Solutions

242 solved problems of several degrees of difficulty in nonrelativistic Quantum Mechanics, ranging from the themes of the crisis of classical physics, through the achievements in the framework of modern atomic physics, down to the still alive, more intriguing aspects connected e.g. with the EPR paradox, the Aharanov-Bohm effect, quantum teleportation.

The Elephant in the Room
Stories About Cancer Patients and their Doctors

The Elephant in the Room is a collection of short stories that creatively communicate the cancer patient’s journey. The stories, based on real-life accounts, are built around the idiosyncratic relationships between patients and their doctors. Using humor, empathy and wisdom, Jonathan Waxman explores the very human side of cancer as well as providing expert commentary on the clinical aspects of diagnosis and therapy of this disease. These stories comfort and entertain, inform and engage, and are a treat to read for anyone whose life has been affected by cancer.

Beyond Individual Differences

Organizing Processes, Information Overload, and Classroom Learning

In an era of intense interest in educational reform, spurred by increasing global competition for jobs and advancement, it is more critical than ever to understand the nature of learning. And although much attention is paid to differences between learners, short shrift is often given to cognitive functions that characterize successful learning for all students. Yet these are the very functions that determine the difference between successful and rewarding learning versus merely "doing" without truly learning. Firmly grounded in the principles of neuropsychology, Beyond Individual Differences analyzes both successful and unproductive learning in terms of the brain’s organizing processes—that is, its unconscious sifting, selecting, and meaning-making that enable students to incorporate and build on what they’ve learned in the past. At the same time, it explores the learning situations that cause organization to break down and offers several preventive strategies.

Features

**Encyclopedia of Adolescence**

The Encyclopedia of Adolescence will break new ground as an important central resource for the study of adolescence. Comprehensive in breadth and textbook in depth, the Encyclopedia of Adolescence – with entries presented in easy-to-access A to Z format – will serve as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer’s print and online flexibility, the Encyclopedia will be at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to "Self, Identity and Development in Adolescence". This area covers research relating to identity, from early adolescence through emerging [...] Features

**Household Economic Behaviors**

Significant recent changes in the structure and composition of households make the study of the economic relationships within the household of particular interest for academics and policy-makers. In this context, Household Economic Behaviors, through its focus on theoretical and empirical chapters on a range of economic behaviors within the household, provides a new and timely viewpoint. Following the Introduction and one or two surveys which give a general background, the volume includes theoretical and empirical perspectives on allocation of available time within the household, monetary and non-monetary transfers between household members, and intra-household bargaining.

**Features**

For decades, the traditional model of household economic behavior assumed a nuclear family and a standardized structure. But recent seismic shifts in family composition (e.g., childless, cohabiting, blended) and in the ways family members shop, save, and work are bringing challenges to the unitary model and opening up new avenues for study. In Household Economic Behaviors, a distinguished [...] Contents

Rural Caregiving in the United States

Research, Practice, Policy

Caregivers living in rural areas face daunting obstacles. In addition to the isolation and anxiety that many caregivers across the country experience, rural caregivers must also cope with limited access to uncoordinated resources and severe shortages of trained professionals. Although many research, policy, and practice upgrades have been made in response to caregivers’ general concerns, the specific problems facing the rural caregiver have been less frequently addressed.Focusing on what is known as well as what is needed – and zeroing in on major subgroups within this diverse population – Rural Caregiving in the United States replaces misconceptions of the nonurban experience with real life issues, findings, and solutions. For example, this pioneering volume:Covers a broad range of issues unique to rural caregiving, including research, education/training, policy, and practice.Identifies specific needs related to education, training, and support for rural caregivers.Examines both the positive and[...]

Trust

The Evolutionary Game of Mind and Society

This book is written around the central message that collectivist societies produce security, but destroy trust. In collectivist societies, people are connected through networks of strong personal ties where the behavior of all agents is constantly monitored and controlled. As a result, individuals in collectivist networks are assured that others will abide by social norms, and gain a sense of security erroneously thought of as “trust.” However, this book argues that this security is not truly trust, based on beliefs regarding the integrity of others, but assurance, based on the system of mutual control within the network. In collectivist societies, security is assured insofar as people stay within the network, but people do not trust in the benevolence of human nature. On the one hand, transaction costs are reduced within collectivist networks, as once accepted into a network the risk of being maltreated is minimized. However, joining the network requires individuals to pay opportunity cost, that[...]

**Handbook of Water and Wastewater Systems Protection**

Following the events of 9/11, the Administrator of the US Environmental Protection Agency created the Water Protection Task Force (WPTF), which identified water and wastewater systems as a major area of vulnerability to deliberate attack. The WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed. The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats. It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs. The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on-line detection methods that are accurate and have a wide detection range. As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and [..]

**Putting Fear of Crime on the Map**

Investigating Perceptions of Crime Using Geographic Information Systems

Since first emerging as an issue of concern in the late 1960s, fear of crime has become one of the most researched topics in contemporary criminology and receives considerable attention in a range of other disciplines including social ecology, social psychology and geography. Researchers looking the subject have consistently uncovered alarming characteristics, primarily relating to the behavioural responses that people adopt in relation to their fear of crime. This book reports on research conducted over the past eight years, in which efforts have been made to pioneer the combination of techniques from geographical information systems (GIS) in order to map the fear of crime. The first part of the book outlines the history of research into fear of crime, with an emphasis on the many approaches that have been used to investigate the problem and the need for a spatially-explicit approach. The second part provides a technical breakdown of the GIS-based techniques used to map [..]

**Features**

The impact of crime on society is well-known and well-documented. But fear of crime also takes a major toll, affecting individual mobility, neighborhood cohesion, and local economies, and is an increasingly important topic in criminology and other disciplines. In recent years, Geographic Information Systems technology has brought needed spatial dimensions to research into fear of crime. [..]

The Many Faces of Youth Crime
Contrasting Theoretical Perspectives on Juvenile Delinquency across Countries and Cultures

This book presents the first comprehensive analysis of the second International Self-Report Delinquency study (ISRD-2). An earlier volume, Juvenile Delinquency in Europe and Beyond (Springer, 2010) focused mainly on the findings with regard to delinquency, victimization and substance use in each of the individual participating ISRD-2 countries. The Many Faces of Youth Crime is based on analysis of the merged data set and has a number of unique features: # The analyses are based on an unusually large number of respondents (about 67,000 7th, 8th and 9th graders) collected by researchers from 31 countries; # It includes reports on the characteristics, experiences and behaviour of first and second generation migrant youth from a variety of cultures; # It is one of the first large-scale international studies asking 12-16 year olds about their victimization experiences (bullying, assault, robbery, theft); # It describes both intriguing differences between young people from different countries and country.[…]

Investigating Quality of Urban Life
Theory, Methods, and Empirical Research

The study of quality of urban life involves both an objective approach to analysis using spatially aggregated secondary data and a subjective approach using unit record survey data whereby people provide subjective evaluations of QOL domains. This book provides a comprehensive overview of theoretical perspectives on QOUL and methodological approaches to research design to investigate QOUL and measure QOL dimensions. It incorporates empirical investigations into QOUL in a range of cities across the world.

Features
This volume synthesizes past and current, international research on the quality of urban life. It emphasizes the contributions of the urban environment to the overall well-being of residents living in urban areas ranging in scale from small cities and their hinterlands to metropolitan regions. The term urban environment refers to the socio-physical aspects of urban living ranging from individual dwellings […]

New Perspectives in Global Public Archaeology

Since its very beginning, archaeology has in many senses always related to a much wider constituency than just archaeologists. This relationship between archaeology and the public has often been overlooked and constantly changes. Public archaeology, as a field of research and practice, has been developing since the 1970s in English-speaking countries, particularly in the United States, Britain, and Australia, and is today beginning to spread to other parts of the world. Global expansion of public archaeology comes with the recognition of the need for a careful understanding of local contexts, particularly the culture and socio-political climate. This volume critically examines the current theories and practices of public archaeology through relevant case studies from different regions throughout the world, including: Japan, China, South Korea, New Caledonia, South Africa, Senegal, Jordan, Italy, Peru, Canada, the United Kingdom, the United States, and Australia. These case studies are examined from [...] New Perspectives in Global Public Archaeology

Conceptualizing Cultural Hybridization

A Transdisciplinary Approach

Within the context of globalization, cultural transformations are increasingly analyzed as hybridization processes. Hybridity itself, however, is often treated as a specifically post-colonial phenomenon. The contributors in this volume assume the historicity of transcultural flows and entanglements; they consider the resulting transformative powers to be a basic feature of cultural change. By juxtaposing different notions of hybridization and specific methodologies, as they appear in the various disciplines, this volume’s design is transdisciplinary. Each author presents a disciplinary concept of hybridization and shows how it operates in specific case studies. The aim is to generate a transdisciplinary perception of hybridity that paves the way for a wider application of this crucial concept.

Contradictions of Neoliberal Planning

Cities, Policies, and Politics

This book argues that the concepts of ‘neoliberalism’ and ‘neoliberalisation’, while in common use across the whole range of social sciences, have thus far been generally overlooked in planning theory and the analysis of planning practice. Offering insights from papers presented during a conference session at a meeting of the Association of American Geographers in Boston in 2008 and a number of commissioned chapters, this book fills this significant hiatus in the study of planning. What the case studies from Africa, Asia, North America and Europe included in this volume have in common is that they all reveal the uneasy cohabitation of ‘planning’ – some kind of state intervention for the betterment of our built and natural environment – and ‘neoliberalism’ – a belief in the superiority of market mechanisms to organize land use and the inferiority of its opposite, state intervention. Planning, if anything, may be seen as being in direct contrast to neoliberalism, as something that should be rolled[...]

**Work and Mental Health in Social Context**

Anyone who has ever had a job has probably experienced work-related stress at some point or another. For many workers, however, job-related stress is experienced every day and reaches more extreme levels. Four in ten American workers say that their jobs are “very” or “extremely” stressful. Job stress is recognized as an epidemic in the workplace, and its economic and health care costs are staggering: by some estimates over $1 billion per year in lost productivity, absenteeism, and worker turnover, and at least that much in treating its health effects, ranging from anxiety and psychological depression to cardiovascular disease and hypertension. Why are so many American workers so stressed out by their jobs? Many psychologists say stress is the result of a mismatch between the characteristics of a job and the personality of the worker. Many management consultants propose reducing stress by “redesigning” jobs and developing better individual strategies for “coping” with their stress. But, these[...]

**Features**
The authors of Work and Mental Health in Social Context take a different approach to understanding the causes of job stress. Job stress is systematically created by the characteristics of the jobs themselves: by the workers’ occupation, the organizations in which they work, their placements in different labor markets, and by broader social, economic and institutional structures, processes and [...]

**Cassandra non era un’idiota**

Il destino è prevedibile

**Features**
Si fa sempre un po’ fatica – ovvio – a pensare che il mito (nella fattispecie quello di Cassandra) racconti fatti realmente accaduti. Infatti non sono realmente accaduti. Ma è difficile che il mito racconti fatti totalmente impossibili. Nessuno sa perché, ma il mito verte sempre intorno ad accadimenti che un giorno magari si rivelaranno un po’ veri. Non del tutto veri: solo un po’. Ma veri. E’ così del [...]

**A Concise Guide to Statistics**

The text gives a concise introduction into fundamental concepts in statistics. Chapter 1: Short exposition of probability theory, using generic examples. Chapter 2: Estimation in theory and practice, using biologically motivated examples. Maximum-likelihood estimation in covered, including Fisher information and power computations. Methods for calculating confidence intervals and robust alternatives to standard estimators are given. Chapter 3: Hypothesis testing with emphasis on concepts, particularly type-1 , type-II errors, and interpreting test results. Several examples are provided. T-tests are used throughout, followed important other tests and robust/nonparametric alternatives. Multiple testing is discussed in more depth, and combination of independent tests is explained. Chapter 4: Linear regression, with computations solely based on R. Multiple group comparisons with ANOVA are covered together with linear contrasts, again using R for computations.

Analyse statistique des risques agro-environnementaux

Études de cas

Cet ouvrage constitue un manuel pratique qui s’adresse aux ingénieurs, scientifiques et étudiants travaillant sur les risques agro-environnementaux. Il constitue une bonne introduction aux principaux types de modèle et aux principales méthodes statistiques utiles pour l’analyse de ces risques. L’utilisation de chaque méthode est illustrée par une ou plusieurs applications traitant de problèmes concrets (pollution de l’eau par les nitrites, invasion par des espèces nuisibles, flux de gènes d’une culture OGM vers une culture non OGM etc.). Les programmes informatiques utilisés pour développer les modèles et appliquer les méthodes statistiques sont présentés et commentés en détail. Ils ont tous été réalisés avec des logiciels libres facilement téléchargeables (type R).

Features

Conçu comme un véritable manuel pratique, ce livre est une introduction aux méthodes statistiques les plus couramment utilisées pour l’analyse des risques agro-environnementaux. Celles-ci peuvent être regroupées au sein de trois grandes sections : • La modélisation des risques en fonction de facteurs environnementaux et anthropiques (modèle linéaire, modèle linéaire généralisé, modèle non linéaire, [..]) • Les modèles et applications de méthodes statistiques concrets (pollution de l’eau par les nitrites, invasion par des espèces nuisibles, flux de gènes d’une culture OGM vers une culture non OGM etc.). Les programmes informatiques utilisés pour développer les modèles et appliquer les méthodes statistiques sont présentés et commentés en détail. Ils ont tous été réalisés avec des logiciels libres facilement téléchargeables (type R).

Bayesian Theory and Methods with Applications

Bayesian methods are growing more and more popular, finding new practical applications in the fields of health sciences, engineering, environmental sciences, business and economics and social sciences, among others. This book explores the use of Bayesian analysis in the statistical estimation of the unknown phenomenon of interest. The contents demonstrate that where such methods are applicable, they offer the best possible estimate of the unknown.

Beyond presenting Bayesian theory and methods of analysis, the text is illustrated with a variety of applications to real world problems.
