Advances in Flow Research

The concept of Flow was first explained by Csikszentmihalyi (1975), described as an “optimal experience,” he noted that artists were entirely caught up in their projects, working feverishly to finish them and then lose all interest in their work after completion. The incentive lies in the act of creativity itself. The person feels optimally challenged while totally immersed in the activity. At the heart of flow research is the motivational aspect of this experience. Flow motivates people to carry out certain activities repeatedly, seeking a challenge in the act and looking to improve their skills and abilities. In this book, this motivational aspect will be imbedded in and related to other theories of (intrinsic) motivation and empirical work on flow and performance. The book provides a review of the current flow research, with a focus on rigorous analysis on methodology. The author takes the time to present methodological aspects in flow research to qualify empirical work.

Features
- Presents the newest developments in Flow research
- Includes critical methodological and theoretical examination of the Flow experience
- Presents highlights of critical examples and definitions

Contents

Mindfulness and Acceptance in Couple and Family Therapy

This book reviews the research and philosophical foundations for using mindfulness, acceptance, and Buddhist psychology in couple and family therapy. It also provides a detailed and practical approach for putting these ideas into action in the therapy room, including a mindful approach to therapeutic relationships, case conceptualization, treatment planning, teaching meditation, and intervention.

Features
- First book to present a mindfulness-based approach to helping couples and families
- Provides a theoretical framework for mindfulness-based couple and family therapy (MBCFT)
- Integrates mindfulness and Buddhist psychological principles
- Offers a strength-based approach to therapy
- Includes handouts and worksheets
