H. Radder
The Material Realization of Science
From Habermas to Experimentation and Referential Realism

This book develops a conception of science as a multi-dimensional practice, which includes experimental action and production, conceptual-theoretical interpretation, and formal-mathematical work.

Features
- Engages the deep philosophical questions concerning scientific realism and it develops a comprehensive perspective on these questions
- Acknowledges and exploits the intimate relationship between science and technology
- Relates the philosophical issues to broader, social issues, especially through its new postscript and discussion of the early and recent views of Habermas will make the book attractive to a broad international readership, including both analytic and continental philosophers
