Existence as a Real Property

The Ontology of Meinongianism

This profound exploration of one of the core notions of philosophy—the concept of existence itself—reviews, then counters (via Meinongian theory), the mainstream philosophical view running from Hume to Frege, Russell, and Quine, summarized thus by Kant: “Existence is not a predicate.” The initial section of the book presents a comprehensive introduction to, and critical evaluation of, this mainstream view. The author moves on to provide the first systematic survey of all the main Meinongian theories of existence, which, by contrast, reckon existence to be a real, full-fledged property of objects that some things possess, and others lack.

Features

- A comprehensive introduction to the notion of existence—arguably, the most important concept of ontology and metaphysics
- Introduces both mainstream and non-standard theories within the philosophical debate on existence
- Adopts a meta-ontological viewpoint and develops an original neo-Meinongian theory

Honor and Revenge: A Theory of Punishment

This book addresses the problem of justifying the institution of criminal punishment. It examines the “paradox of retribution”: the fact that we cannot seem to reject the intuition that punishment is morally required, and yet we cannot (even after two thousand years of philosophical debate) find a morally legitimate basis for inflicting harm on wrongdoers.

Features

- First book to expound a new theory that provides a rational foundation for the practice of punishment
- Provides a moral defense of revenge in a way never before attempted
- Gives a concise but systematic summary of the current state of the debate
- Is written at a level that is accessible to researchers and practitioners alike, avoiding technical philosophical jargon or abstruse issues in philosophy

**The Social Debate over Human Enhancement**

This book provides an introductory overview to the social debate over enhancement technologies with an overview of the transhumanists’ call to bypass human nature and conservationists’ argument in defense of it. The author presents this controversy as it unfolds in the contest between transhumanists proponents and conservationists, who push back with an argument to conserve human nature and to ban enhancement technologies. This book provides an overview of the key contested points and present the debate in an orderly, constructive fashion. Readers are informed about the discussion over humanism, the tension between science and religion, and the interpretation of socio-technological revolutions; and are invited to make up their own mind about one of the most challenging topics concerning the social and ethical implications of technological advancements.
