Regulation of Infrastructure Markets
Legal Cases and Materials on Seaports, Railways and Airports

This casebook is an effort to explain infrastructure markets from a unique perspective: regulation. Regulation means the analysis of two main groups of laws, namely internal market and antitrust law. The aim is to find a uniform regulation applicable to infrastructures in the European common market through a direct reading and explanation of judicial opinions. The book is divided into five parts: two general chapters and three thematic chapters. The first chapter is an introduction to the main European law principles applicable to infrastructure markets. The second chapter applies the Services of General Interest doctrine to infrastructure markets. The key issue is the separation of the public administrations and the private companies operating infrastructures.

Features
- First book on infrastructures regulation that allows a direct reading of the relevant cases
- Comparative perspective: the American regulation of railways; the Italian regulation of seaports, the French regulation of airports
- Intuitive organization of the book through three thematic chapters: seaports, railways and airports

Comparative Issues in the Governance of Research Biobanks

Property, Privacy, Intellectual Property, and the Role of Technology

In the last few years, the boom in biobanking has prompted a lively debate on a host of interrelated legal issues, such as the Gordian knot of the ownership of biological materials, as well as privacy concerns. The latter are due to the difficulty of accepting that biological samples must be completely anonymous without making it practically impossible to exploit their information potential. The issues also include the delicate role and the changing content of the donor’s “informed consent” as the main legal tool that may serve to link the privacy and property interests of donors with the research interests and the set of principles that should be at the core of the biobanking practice. Lastly, the IP issues and the patentability of biological samples as well as the protection of databases storing genetic information obtained from the samples are covered. Collecting eighteen essays written by eminent scholars from Italy, the US, the UK and Canada, this book provides new solutions to these problems. From a comparative viewpoint, it explores the extent to which digital technology may assist in tackling the numerous regulatory issues raised by the practice of biobanking for research purposes.

Contents

From the contents: Property and Privacy in Biobanking.- Intellectual Property and Biobanks.- Biobanks: The Perspective of Biobanker’s.
