Modeling Students’ Mathematical Modeling Competencies

ICTMA 13

Modeling Students’ Mathematical Modeling Competencies offers welcome clarity and focus to the international research and professional community in mathematics, science, and engineering education, as well as those involved in the sciences of teaching and learning these subjects.

Features
- Provides timely and cutting edge research crossing traditional boundaries
- Offers unique and contemporary perspectives synthesized into important, practical strands
- Documents mathematical achievements that can transform society

Contents

Fields of interest
Mathematics Education; Mathematical Modeling and Industrial Mathematics

Lesson Play in Mathematics Education: A Tool for Research and Professional Development

Lesson play is a novel construct in research and teachers’ professional development in mathematics education. Lesson play refers to a lesson or part of a lesson presented in dialogue form—inspired in part by Lakatos’s evocative Proofs and Refutations—featuring imagined interactions between a teacher and her/his students. We have been using and refining our use of this tool for a number of years and using it in a variety of situations involving mathematics thinking and learning. The goal of this proposed book is to offer a comprehensive survey of the affordances of the tool, the results of our studies—particularly in the area of pre-service teacher education, and the reasons that the tool offers such productive possibilities for both researchers and teacher educators.

Features

- Introduces and elaborates upon a novel tool, lesson play, in teacher education and professional development
- Provides critical analyses of numerous plays created by prospective teachers, offering insight on teachers’ pedagogical and subject matter knowledge
- Provides a variety of scenarios and models for implementing the tool in mathematics teacher education and beyond
