Handbook of Legal Reasoning and Argumentation

This handbook offers a deep analysis of the main forms of legal reasoning and argumentation from both a logical-philosophical and legal perspective. These forms are covered in an exhaustive and critical fashion, and the handbook accordingly divides in three parts: the first one introduces and discusses the basic concepts of practical reasoning. The second one discusses the main general forms of reasoning and argumentation relevant for legal discourse. The third one looks at their application in law as well as at the different areas of legal reasoning. The handbook’s division in three parts reflects its conceptual architecture, since legal reasoning and argumentation are considered in relation to the more general types (and problems) of reasoning.

Features
- The only work to provide a comprehensive, thematic and systematic account of legal reasoning.
- The first work on legal reasoning which systematically discusses it in relation to logics and philosophies of practical reason.
- A multidisciplinary focus provides a good balance of formal (logical), philosophical and legal aspects.

Fields of interest
Philosophy of Law; Theories of Law; Philosophy of Law, Legal History; Logic

Philosophical Biology in Aristotle’s Part of Animals

This book provides a detailed analysis of Aristotle’s Parts of Animals. It presents the wealth of information provided in the biological works of Aristotle and revisits the detailed natural history observations that inform, and in many ways penetrate, the philosophical argument. It raises the question of how easy it is to clearly distinguish between what some might describe as “merely” biological and the philosophical. It explores the notion and consequences of describing the activity in which Aristotle is engaged as philosophical biology. The book examines such questions as: do readers of Aristotle have in mind organisms like Ascidians or Holothurians when trying to understand Aristotle’s argument regarding plant-like animals?
