Creative Industry Districts

An Analysis of Dynamics, Networks and Implications on Creative Clusters in Shanghai

Since the late 1990s, there have been broad discussions concerning the rapid rise of the creative economy. Creative or cultural industry is seen as the new engine of the regional growth for both developed economies and emerging nations. At the point of transition in economy and society, China is recently striving to transform its economy from “made in China” towards “created in China”. This book provides an insight into creative industries and spaces in Shanghai, which is the fastest growing megacity in China and the center of modern economic development on a global scale.

Features

- This in-depth empirical study offers new approaches and perspectives on the current discussion of creative industries.
- Provides numerous first-hand materials to the readers with valuable evidence-based recommendations on “creative city-making” for urban practitioners and planners.

Contents

Introduction.- From the New Economy to Creative City.- Characterizing Shanghai’s Creative Industries and Districts.- Dynamics in Clustering of Creative Industries in Shanghai.- Network Analysis of Creative Clusters in Shanghai.- Impacts of Creative Industry Districts in Shanghai.- Discussion and Conclusions.

Houses in Transformation

Search for the Implicit Reasons

This book analyzes the reasons of spontaneous transformation in self-built houses in the context of developing countries. Recognizing Housing Transformation as a natural phenomenon, the book focuses on self-built houses in the city of Dhaka. Firstly, it explains the explicit reasons behind spontaneous housing transformations. Then the book carefully unveils the implicit values that are hidden behind those explicit reasons. The entire book is an ethnographic journey, which expresses unique stories behind houses in transformation.

Features

- Provides a new perspective to look at the houses we live in.
- Enlightens the impact of implicit socio-cultural values on housing decisions.
- Includes distinct themes on the reasons behind housing transformation.

Contents

Explicit reasons behind housing transformation.- Beyond the explicit world.- Major Implicit themes behind housing transformation.- Minor and Meta Implicit themes behind housing transformation.- Conclusion.

Mutual Sustainability of Tubewell Farming and Aquifers

Perspectives from Balochistan, Pakistan

This book develops and presents a conceptual model for sustainable-groundwater irrigated agriculture. The model is based on the general principles of the economic theories of cost-benefit relations and behavioral models of resource use. The study has evaluated the advances in tube-well farming and the aquifer potential in arid Balochistan over a period of three decades. It has analyzed the booms and busts of the farming over time taking into consideration the local aquifer limitations and the socio-political considerations and policy framework. Three data sets –farmers, expert officials, and satellite images - have been used to aid validation. By observing the most vital parameters, the study has concluded that the local aquifer has been falling at a rate directly proportional to the growth rate of irrigated farming, suggesting the current development process is unsustainable.

Features

- Contains numerous step-by-step tutorials to help the reader learn quickly.
- Includes a special chapter on next generation Flash to prepare readers for the future.
- Provides ten tips on how to protect flash sites from hackers.

Contents

Introduction.- Conceptual Framework and Literature Review.- Environmental Profile of the Study Area. Material and Methods.- Results and Discussion: Part A.- Results and Discussion: Part B.- Conclusion, Key Findings and Suggestions.

Global LAnd Surface Satellite (GLASS) Products

This book describes the algorithms, validation and preliminary analysis of the Global LAnd Surface Satellite (GLASS) products, a long-term, high-quality dataset that is now freely available worldwide to government organizations and agencies, scientific research institutions, students and members of the general public. The GLASS products include leaf area index, broadband albedo, broadband emissivity, downward shortwave radiation and photosynthetically active radiation. The first three GLASS products cover 1981 to 2012 with 1km and 5km spatial resolutions and 8-day temporal resolution, and the last two GLASS products span 2008 to 2010 with 3-hour temporal resolution and 5km spatial resolution. These GLASS products are unique. The first three are spatially continuous and cover the longest period of time among all current similar satellite products. The other two products are the highest spatial-resolution global radiation products from satellite observations that are currently available. These products can be downloaded from Beijing Normal University at http://glass-product.bnu.edu.cn/ and the University of Maryland Global Land Cover Facility at http://www.glcf.umd.edu.

Contents

- Introduction.
- Leaf Area Index.
- Shortwave Albedo.
- Longwave Emissivity.
- Incident Shortwave Radiation.
- Incident Photosynthetic Active Radiation.
- Challenges and prospects.
