New Series
New Frontiers in Translation Studies
Series editor: D. Li

Translation Studies as a discipline has witnessed the fastest growth in the last 40 years. With translation becoming increasingly more important in today’s globalized world, some have even observed a general translational turn in humanities in recent years. The New Frontiers in Translation Studies aims to capture the newest developments in translation studies, with a focus on: • Translation Studies research methodology, an area of growing interest amongst translation students and teachers; • Data-based empirical translation studies, a strong point of growth for the discipline because of the scientific nature of the quantitative and/or qualitative methods adopted in the investigations; and • Asian translation thoughts and theories, to complement the current Eurocentric translation studies.

Corpus-Based Studies of Translational Chinese in English-Chinese Translation

This book takes a corpus-based approach, which integrates translation studies and contrastive analysis, to the study of translational language. It presents the world’s first balanced corpus of translational Chinese, which, in combination with a comparable native Chinese corpus, provides a reliable empirical basis for a comprehensive account of the macro-statistic, lexical, and grammatical features of translational Chinese in English-to-Chinese translation – a significant contribution to Descriptive Translation Studies. The research findings based on these two distinctly different languages have important implications for universal translation research on the European tradition.

Features
• The first book-length, comprehensive account of translational Chinese • An in-depth investigation into universal translation hypotheses • An excellent demonstration of using corpora in translation studies
