**Justice, Conflict and Wellbeing**

**Multidisciplinary Perspectives**

Justice, conflict and wellbeing are large topics that occupy researchers from a variety of disciplines, as well as laypeople and policy makers.

**Features**
- Multi and interdisciplinary approach
- Contains original research, reviews of relevant empirical research, and theory
- Covers a variety of levels (individual, group, society) and research methods (qualitative and quantitative)

**Contents**

**Fields of interest**
Law and Psychology; Psychotherapy and Counseling; Cognitive Psychology

**Target groups**
Research

**SpringerBriefs in Psychology**

SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include: A timely report of state-of-the-art analytical techniques A bridge between new research results as published in journal articles and a contextual literature review A snapshot of a hot or emerging topic An in-depth case study or clinical example A presentation of core concepts that readers must understand to make independent contributions SpringerBriefs in Psychology showcase emerging theory, empirical research, and practical application in a wide variety of topics in psychology and related fields. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.

**Managing the Public’s Trust in Non-profit Organizations**

Globally there is growing concern over charities abilities to raise funds. This is of concern to both charity organizations and policy makers. One of the key factors that determine the public’s willingness to provide funds (to donate) is trust in both specific charity organizations and the sector in general. A significant amount of research from a number of disciplines has pointed to ways in which the public’s trust can be generated and maintained. Bring this research into a single source will provide a valuable guide for both individual charity organizations and policy makers.

**Features**
- Provides a valuable guide for both individual charity organizations and policy makers
- Is of practical benefit and usage for fundraising managers
- Addresses criticism made of Millennium Development Goals and their implementing principles

**Contents**
Trust and Donating Money.- Understanding your Donor’s Trust in your Charity.- Improving Charity Efficiency and Accountability in Order to Develop a foundation to Build transactional Trust.- Communication: Delivering Information to Donors.- Dealing with Trust Violation Events.- Summary and Conclusions.

**Fields of interest**
Psychology Research; Organizational Studies, Economic Sociology; Psychological Methods/ Evaluation

Family Therapy with Muslims

There are approximately 1.5 billion Muslims in the world. Millions of Muslims live in North America and Europe; more than 8 million in the U.S. and about one million in Canada. In addition, Muslims in North America have the third-highest divorce rate at 33 percent. Yet, there is a scarcity of written and researched material by Muslim scholars and scientists on the family, as viewed from historical, socio-cultural, psychological, behavioral and political perspectives. Family Therapy with Muslims is a much needed reference that presents many family therapy models in the context of working specifically with the Muslim population. This book offers practical clinical solutions to working with this cultural and religious minority.

Forensic Neuropsychological Evaluation of the Violent Offender

This book focuses on the importance of using a brain-behavior relationship framework for the successful use of neuropsychological evaluations for courtroom purposes. It stresses the need to understand the offender as a unique individual assessed accordingly from cognitive and personality perspectives. The desired goal is to reach a more nuanced evaluation rather than a compilation of test scores. This book clearly explains the circumstances that prevent proper testing including batteries that are confusing or frustrating to the person being tested or those that cause fatigue thus interfering with an appropriate picture of cognitive, motor and sensory skills. Irrelevance of some tests for addressing the reason for referral is also covered as is the importance of setting and adequate time for evaluation.

Features
► Explains the importance of flexible rather than fixed batteries 
► Describes pitfalls in achieving an appropriate evaluation shows how to provide examinations that allow for the needs, history and setting of the referred individual 
► Provide an overview of the brain-behavior relationship framework 

Contents
Introduction.- Neuropsychological Forensic Evaluations.- Designing a Neuropsychological Test Battery.

**The Nature of Language**

Evolution, Paradigms and Circuits

The book The Nature of Language addresses one of the most fundamental questions of mankind: how did language evolve, and what are the neuro-biological and cognitive foundations of language processing?

**Features**

- Addresses all scholars interested in evolution, biology, neurology, language, cognition and theory of mind
- Uses modern neuroimaging technology to map language and related cognitive functions
- Illustrates and discusses a genetic blueprint for language

**Contents**

Foreword.- Acknowledgement.- Introduction.- Part I. Bioanthropological Perspective Chapter 1 Evolution of cognitive systems 1.1 Early Ideas 1.2 Darwinian Stance Chapter 2 Human and Non-Human Primates 2.1 Overlaps and Differences 2.2 Origin of Language.- Part II. Neurobiological Assumptions Chapter 3 Neural Blueprint 3.1 Genetic Factors 3.2 Neurogenesis Chapter 4 Spatial and Temporal Parameters 4.1 Brain Mapping 4.2 Electrical Energy.- Part III. Neurolinguistic Reports Chapter 5 Atypical Network 5.1 Children 5.2 Adult Chapter 6 Single Cases 6.1 Language Disorders 6.2 Bilingualism.- Part IV. The Human Language System Chapter 7 The Core System 7.1 Symbolic elements 7.2 Syntactic structures Chapter 8 Meanings 8.1 Semantic Networks 8.2 Theory of Mind.- Conclusions.- Notes Index.

Genes and the Motivation to Use Substances

Human beings have been using intoxicating substances for millennia. But while most people have used psychoactive substances without becoming dependent on them, a significant minority develop substance use disorders. The question remains: why does addiction occur in some and not others?

Features

- Sheds necessary light on genetic vs. environmental factors for addiction risk
- Suggests how to alter substance abuse treatment according to an individual’s genetic code
- Concluding chapter explores the relationship between genetics and neuroscience in addiction

Contents

The following researchers have committed to being part of the 2013 Nebraska Symposium:

Chapter 1: Introduction: Scott Stoltenberg (University of Nebraska) Chapter 2: Matt McGue, Ph.D. (University of Minnesota) Chapter 3: Robert A. Zucker, Ph.D. (University of Michigan) Chapter 4: John C. Crabbé, Ph.D. (Oregon Health & Science University) Chapter 5: Robert Philibert, M.D., Ph.D. (University of Iowa) Chapter 6: David Goldman, M.D. (National Institute on Alcohol Abuse and Alcoholism) Chapter 7: Arpana Agrawal, Ph.D. (Washington University, St. Louis) Chapter 8: Concluding chapter: Scott Stoltenberg (University of Nebraska) Authors will each contribute a chapter, addressing the motivation to use substances from their specific academic background. (exact chapter titles to be announced)

Scott Stoltenberg will write the introductory and concluding chapter.
