The European Journal of Development Research
Call for Proposals for Special Issues

The European Journal of Development Research invites proposals for themed special issues.

The EJDR is a multi-disciplinary journal that seeks to broaden our understanding of the processes that advance or impede human development, whether from a political, economic, sociological or anthropological perspective. The journal is published five times a year and we publish two special issues annually.

The journal particularly welcomes proposals for special issues on topics that improve our conceptual understanding of processes affecting human development, or propose policy and developmental tools by analysing empirical evidence, whether qualitative, quantitative or anecdotal.

We understand development to be an ongoing process that affects all communities, societies, states and regions. We therefore do not have a geographical bias, but wherever possible prospective authors should seek to highlight how their study has relevance to researchers and practitioners studying development in different environments. Although a majority of the papers we publish examine the challenges for developing countries, we recognize that there are important lessons to be derived from the experiences of regions in the developed world.

Recent EJDR special issue topics have included:
- Beyond the BRICs: Alternative Strategies of Influence in the Global Politics of Development
- Young Lives in Transition: From School to Adulthood?
- The Legacy of the Poverty Reduction Strategy Processes in Latin America
- New Avenues for Pastoral Development in sub-Saharan Africa

We invite you to contact the editorial team for an initial and exploratory discussion about your special issue idea. If initial discussions are productive, the editors may invite you to submit a full proposal.

Please note that the EJDR does not typically accept proposals for special issues associated with or based on conference submissions.
