Journal Metrics 2017

Usage

Downloads - 2017 Springer measures the usage on the SpringerLink platform according to the COUNTER (Counting Online Usage of NeTworked Electronic Resources) standards.	6,001
Usage Factor - 2016/2017 The Springer Journal Usage Factor 2016/17 was calculated as suggested by the COUNTER Code of Practice for Usage Factors. It is the median value of the number of downloads in 2016/17 for all articles published online in that particular journal during the same time period. The Usage Factor calculation is based on COUNTER-compliant usage data on the SpringerLink platform. (Counting Online Usage of NeTworked Electronic Resources) standards.	21

Impact

<p>CiteScore 2017</p> <p>CiteScore 2017 counts the citations received in 2017 to documents published in 2014, 2015 or 2016, and divides this by the number of documents published in 2014, 2015 and 2016.</p>	0.53
<p>SNIP - 2017</p> <p>Source Normalized Impact per Paper (SNIP) measures contextual citation impact by weighting citations based on the total number of citations in a subject field. The impact of a single citation is given higher value in subject areas where citations are less likely, and vice versa.</p>	1.148
<p>SJR - 2017</p> <p>SCImago Journal Rank (SJR) is a measure of scientific influence of scholarly journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where such citations come from.</p>	0.219
<p>h5 Index - 2017</p> <p>Google's h5 Index is a metric based on the articles published by a journal over the previous 5 calendar years with a minimum of 100 articles in this period. If a journal publishes 100 articles sooner, an h5 Index can be calculated earlier. h is the largest number of articles that have each been cited h times. The h5 Index therefore cannot be dominated by one or several highly cited articles.</p>	10
